

viDoc

Tune-Up Procedure

The frequency range is setup by manufacturer only. We are not able to switch the frequency. The range is between 2.404 and 2.480 MHz. The operating level will be programmed by vigram. The setting is level 6 which is equivalent to 0 dBm. This setting can only be done at vigram. For changing the viDoc has to be disassembled.

The maximum permissible output power is 0.58 mW.
