GETTING STARTED

IMPORTANT SAFETY INFORMATION

Plug the power adapter into an AC outlet that is always easily accessible. Disconnect the adapter by grasping the plug firmly and pulling it from the AC outlet. Never disconnect the adapter by pulling the cord.

Be sure that the total ampere rating of the products connected to the AC outlet does not exceed the current rating of the outlet, and that the total ampere rating of the products connected to the cord does not exceed the rating of the cord. Also, make sure that the total rating of all products plugged into the wall outlet does not exceed the fuse rating. Look on the power label to determine the ampere rating (AMPS or A) for each device.

Slots and openings in the housing are provided for ventilation. These openings must not be blocked or covered. Never push objects of any kind into cabinet slots or other openings, or spill liquid of any kind onto or into the product.

Keep the device in a well-ventilated area, away from excessive light, heat, or moisture.

Do not use the device in any area with a potentially explosive atmosphere, as sparks in such areas could cause an explosion or fire. Such areas are often (but not always) marked and include areas where you would normally be advised to turn off your vehicle engine, below deck on boats, chemical transfer or storage facilities, vehicles using liquefied gas such as propane or butane, and areas where the air contains chemicals or particles such as grain, dust, or metal powders.

To reduce the risk of serious injury, observe proper workstation setup, and proper posture, health, and work habits for computer users.

Do not place anything on power cords or cables. Care should be taken to route or arrange all cords and cables connected to the V so that they cannot be pulled, grabbed, stepped on, or tripped over.

Do not drop the device or place it on an unstable or vibrating surface. Use the appropriate and correctly sized furniture designed to properly support your Eve V. Devices that are inappropriately situated on dressers, bookcases, shelves, desks, speakers, chests, or carts may fall over and cause damage or personal injury.

ABOUT THE V

At Eve, we believe in putting product decisions in the hands of the end-user. Back in 2016, we joined forces with hardcore gamers, coders, and designers to create the world's first crowd-developed 2-in-1 computer. Now we are carrying on our vision of crowd-development with a community that has grown to over 12 000 tech enthusiasts from all over the world, united by a passion to develop cutting-edge technology. We combined their thoughts and ideas with feedback from thousands of customers into this new and improved second-generation device you now so proudly own. It's not just any 2-in-1: It's the V.

As a result, your device has a unique blend of awesome features. Let's have a look!

FEATURES

The V has an indium-gallium-zinc-oxide (IGZO) display that produces rich on-screen colors and offers great viewing angles. This screen is paired with a metal mesh touch layer for precise and responsive touch- and pen input.

The V is wrapped in a housing of precisely machined aluminum that has been anodized for a smooth, durable finish. The screen is covered in Gorilla Glass Victus and has a micro-texture surface to provide glare reduction that does not rub off.

The V is powered by Intel's 11th Generation Core CPUs and Intel's new Iris X^e graphics adapter, making it compatible with a wide range of apps and games, and providing great performance in a small package.

The V offers a wide range of ports and supports several wireless protocols, so that you can stay connected no matter where you are. With Thunderbolt 4, Bluetooth 5.0, and WiFi 6 you don't have to worry about speed.

NOTE: All specifications referenced are typical and provided by Eve's component manufacturers. Actual performance might vary either higher or lower.

You can find more detailed information in the Technical Specifications section on page 25.

SETTING UP YOUR V

USING THE KICKSTAND

To change the angle for the display, follow these steps:

1. Hold the device with the top edge up.
2. Slide the kickstand away from the device and position the kickstand at the appropriate angle. The kickstand will hold at any angle up to about 170°.
3. To close the kickstand, push the kickstand against the bottom of the device until it is flush with the bottom.

USING A SIM CARD

To connect to a cellular network, a nano SIM card is required.

1. Position the V display-side up on a flat surface.
2. Insert the card tray removal tool or a small, straightened paper clip into the card tray access hole.
3. Press the tool or clip in gently until the card tray is ejected, and remove the tray from the V.
4. To install a SIM card, insert it into the tray as shown. To remove a SIM card, lift it from the tray.
5. Replace the tray in the V. Press in gently on the tray until it is firmly seated.

IMPORTANT: You can damage the SIM card if you insert the wrong size card or insert it or the SIM card tray in the wrong direction. The card might also become stuck in the slot. Do not use SIM card adapters. To prevent damage to the SIM card or connectors, use minimal force when inserting or removing a SIM card.

NOTE: 4G/LTE cellular network connectivity and the SIM card slot are available on select models only.

NOTE: You can disable all wireless devices in the V, including cellular, by enabling airplane mode. This can be done from the Windows Action Center, or by pressing the  key on the V Keyboard. Pressing the key again, de-activated airplane mode and allows wireless connections once more.

USING THE ON-SCREEN KEYBOARD

These instructions help you learn to use the on-screen keyboard.

1. To display an on-screen keyboard, tap the keyboard icon in the notification area, at the far right of the taskbar.
2. Begin typing.

NOTE: Suggested words might be displayed above the on-screen keyboard. Tap a word to select it.

WINDOWS HELLO

Windows Hello allows you to enroll your fingerprint and your facial ID, and set up a PIN. After enrollment, you can use your fingerprint reader, facial ID, or PIN to sign in to Windows.

To set up Windows Hello:

1. Select the Start button, select Settings, select Accounts, and then select Sign-in options.
2. To add a password, select Password, and then select Add.
3. Under Windows Hello Fingerprint or Windows Hello Face, select Set up.
4. Select Get Started, and then follow the on-screen instructions to enroll your fingerprint or facial ID and set up a PIN.

IMPORTANT: To prevent fingerprint logon issues, be sure when you register your fingerprint that all sides of your finger are registered by the fingerprint reader.

NOTE: The PIN is not limited in length. The default setting is for numbers only. To include alphabetic or special characters, select the include letters and symbols check box.

CONNECTIVITY

USB DEVICES

You can use any of the three USB Type-C ports to connect devices such as a mouse, keyboard, phone, external hard drive, and practically anything that is USB-connected and can accept 5V.

NOTE: The port on the left side of the device supports SuperSpeed USB devices with speeds up to 10Gbps. The two ports on the right side of the device supports USB4 devices with speeds of up to 40Gbps.

VIDEO DISPLAY DEVICES

You can use any of the three USB Type-C ports to connect display devices such as a monitor by connecting one end of a USB Type-C cable to the USB Type-C connector on the monitor and the other end to one of the USB Type-C connectors on the V.

NOTE: It is possible to adapt the USB Type-C port to DisplayPort or HDMI, allowing connection to a wider range of devices. The port on the left side of the device supports DisplayPort 1.2 devices. The two ports on the right side of the device supports DisplayPort 1.4 and HDMI 1.4b devices. Additional connections may be possible using active signal adapters.

NOTE: You can press Win + P to select from four display states:

- PC screen only: View the screen image on the computer only.
- Duplicate: View the screen image simultaneously on both the computer and external device.
- Extend: View the screen image extended across both the computer and external device.
- Second screen only: View the screen image on the external device only.

For best results, especially if you choose the Extend option, increase the screen resolution of the external device, as follows. Select the Start button, select Settings, and then select System. Under Display, select the appropriate resolution, and then select Keep changes.

THUNDERBOLT DEVICES

You can use either of the two USB Type-C ports on the right side of the device to connect Thunderbolt devices such as monitors, external graphics adapters, and high-speed storage.

ONE-CABLE SOLUTION

If your monitor or docking station support these features, then you can attach the V to the monitor or dock with a single USB Type-C cable. This USB Type-C cable then provides connectivity for high-speed data, audio and video, as well as charging the V.

- If your monitor or dock connects through USB: Connect one end of a USB Type-C cable to any of the Type-C ports on the V and the other end to the USB Type-C port on the monitor or docking station.
- If your monitor or dock connects through Thunderbolt: Connect one end of a Type-C Thunderbolt cable to either of the two USB Type-C ports on the right side of the V and the other end to the Thunderbolt port on the monitor or docking station.

CAUTION: Use only USB Type-C cables that are rated for up to at least 60W of power delivery. The use of inappropriate cables could represent a fire hazard. Charging at high power can cause high temperatures, consult the documentation that came with your charging device about fire safety.

IMPORTANT: The monitor or docking station must be able to support the USB Power Delivery protocol over the USB Type-C connector to charge or power the V.

IMPORTANT: The monitor must be able to support DisplayPort Alternate Mode over the USB Type-C connector to display an image signal from the V.

AUDIO DEVICES

Though the V has four built-in speakers, it also has a built-in digital-to-analog converter (DAC) and headphone amplifier that can be used to connect external audio devices such as wired speakers or headphones. Connect the 3.5mm audio jack plug to the audio port on the left side of the V to make use of your speakers, headphones, or other audio device.

CAUTION: To reduce the risk of personal injury, adjust the V's volume before using headphones, earbuds, or a headset. Gradually increase the volume until you can hear it clearly, comfortably and without distortion. Limit the amount of time you are subjected to high-volume sound.

NOTE: To connect wireless speakers to your computer, follow the device manufacturer's instructions.

WIFI NETWORKS

The V can connect to wireless local area networks (commonly referred to as Wi-Fi networks, wireless LANs, or WLANs) in corporate offices, your home, and public places such as airports, restaurants, coffee shops, hotels, and universities. In a WLAN, the mobile wireless device in your V communicates with a wireless router or a wireless access point. These networks are a common method of gaining access to the Internet.

To connect to a Wi-Fi network:

1. Be sure that the WLAN device is on.
2. On the taskbar, select the network status icon, and then connect to one of the available networks.
3. If you select a security-enabled WLAN, you are prompted to enter a security code. Enter the code, and then select Next to complete the connection.

NOTE: If no WLANs are listed, you might be out of range of a wireless router or access point. The functional range (how far your wireless signals travel) depends on WLAN implementation, router manufacturer, and interference from other electronic devices or structural barriers such as walls and floors.

NOTE: The Network and Sharing Center allows you to set up a connection or network, connect to an existing network, and diagnose and repair network problems. Select the Start button, select Settings, and then select Network & Internet.

NOTE: You can disable all wireless devices in the V, including Wi-Fi, by enabling airplane mode. This can be done from the Windows Action Center, or by pressing the ✈ key on the V Keyboard. Pressing the key again, de-activated airplane mode and allows wireless connections once more.

BLUETOOTH DEVICES

Bluetooth allows the V to create a personal area network (PAN) to connect to other Bluetooth-enabled devices such as computers, phones, printers, headsets, speakers, and cameras. In a PAN, each device communicates directly with other devices, and devices must be relatively close together—typically within 10 m (approximately 33 ft) of each other.

To connect a Bluetooth device:

1. Select the Start button, select Settings, and then select Devices.
2. Turn on Bluetooth, if it is not already turned on.
3. Select Add Bluetooth or other device, and then in the Add a device dialog box, select Bluetooth.
4. Select your device from the list, and then follow the on-screen instructions.

NOTE: If the device requires verification, a pairing code is displayed. On the device that you are adding, follow the on-screen instructions to verify that the code on your device matches the pairing code. For more information, see the documentation provided with the device.

NOTE: If your device does not appear in the list, be sure that Bluetooth is turned on for that device. Some devices might have additional requirements; see the documentation provided with the device

NOTE: You can disable all wireless devices in the V, including Bluetooth, by enabling airplane mode. This can be done from the Windows Action Center, or by pressing the ✈ key on the V Keyboard. Pressing the key again, de-activated airplane mode and allows wireless connections once more.

SATELLITE NAVIGATION NETWORKS

Select models of the V are equipped with a Global Navigation Satellite System (GNSS) device. GNSS satellites in the Global Positioning System (GPS) and similar networks deliver location, speed, and direction information to GNSS-equipped systems.

To enable connection to a satellite navigation network:

To enable GPS, be sure that location is enabled under the Windows privacy setting.

1. Select the Start button, select Settings, select Privacy, and then select Location.
2. Follow the on-screen instructions for using location settings.

NOTE: GNSS network connectivity is available on select models only.

NOTE: You can disable all wireless devices in the V, including satellite navigation, by enabling airplane mode. This can be done from the Windows Action Center, or by pressing the ✈ key on the V Keyboard. Pressing the key again, de-activated airplane mode and allows wireless connections once more.

THE V KEYBOARD

The V Keyboard turns the V from a tablet into a laptop computer, and can serve as a protective cover for the screen.

NOTE: The Eve V Keyboard (model EV0565D) is sold separately.
