

Test Report No.:	DE21CTNH 001 Annex 2	Order No.:	7974615	Page 1 of 11
Order date:	01-03-2021			
Client:	ABAX AS – Hammergata 20, 3264 Larvik, Norway			
Test item:	BLE tracker			
Identification / Type No.:	MINI2			
FCC ID:	2A2EO-MINI2			
Trademark:	ABAX			
Order content:	RF exposure evaluation according to the following standard:			
Test specification:	47 CFR § 1.1310			
Date of receipt:	22-04-2021			
Test sample No.:	Storage no.: A003039511-001 to 003			
Testing period:	08-06-2021 ÷ 15-06-2021			
Place of testing:	TÜV Rheinland Italia S.r.l. Via E. Mattei, 3 20005 Pogliano Milanese (MI) - IT			
Testing laboratory:	TÜV Rheinland Italia S.r.l. Via E. Mattei,3 20005 Pogliano Milanese (MI) - IT			
Test result:	Pass			
Tested by:	Roberto Radice 	Authorized by:	Giovanni Molteni 	
Date:	30-06-2021	Date:	30-06-2021	
Position	(Laboratory technician) Expert	Position	(Laboratory manager) Expert	
Other:	---			
Condition of the test item at delivery:	Test item complete and undamaged			
This test report only relates to the a. m. test sample. Without permission of the test center this test report is not permitted to be duplicated in extracts. This test report does not entitle to carry any test mark.				

RF EXPOSURE EVALUATION

1	<i>Description</i>	BLE tracker
2	<i>Model name</i>	MINI2
3	<i>Serial number</i>	Not present
4	<i>Manufacturer</i>	Norautron - Nedre vei 8, 3183 Horten, Norway
5	<i>Trademark</i>	ABAX
6	<i>Power supply</i>	Coin Cell Battery 3V 220mAH
7	<i>Rated voltage</i>	3V
8	<i>Rated frequency</i>	D.C.
9	<i>Rated current</i>	220mAH
10	<i>Maximum power consumption</i>	----
11	<i>Modulation type</i>	☐ Frequency hopping (FHSS) equipment ☒ Wideband data transmission (non-FHSS equipment) ☐ Direct Sequence Spread Spectrum (DSSS equipment) ☐ Others:
12	<i>Hardware version</i>	Mini 2 rev. 2
13	<i>Software version</i>	1.0.0
14	<i>Dimensions</i>	19x43x6.5 mm
15	<i>Weight</i>	25g
16	<i>Test sample obtaining</i>	☐ Sampling by customer ☒ Sampling by TÜV Rheinland Group ☐ others:

Test report number	List of revisions	Date
DE21CTNH 001 Annex 2	First edition	30-06-2021

RF EXPOSURE EVALUATION
SAR EVALUATION

Test date	17-06-2021
Applied Standard	47 CFR 2.1093
EUT classification (fixed, mobile or portable devices)	☐ Fixed: device physically secured at one fixed location and cannot be easily re-located. ☐ Mobile: transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons (47 cfr 2.1091) ☒ Portable: transmitting device designed to be used so that the radiating structure(s) of the device is/are within 20 centimeters of the body of the user (47 cfr 2.1093)
Temperature	22° C
Humidity	42%
Air pressure	1027 mbar
Tested by	Roberto Radice
Model	MINI2
Test sample No.	N°3 Sample tested (1 for each frequency)
Operating mode	1, 2, 3
Tested terminals	Enclosure
Result	PASS

RF EXPOSURE EVALUATION
FCC SAR limits

Region	Occupational SAR values (W/Kg)	General public SAR values (W/Kg)
Whole body SAR averaging mass = entire body	0,4	0,08
Partial body SAR averaging mass = 1g	8,0	1,6
Hands, wrists, feet and akles SAR averaging mass = 10g	20	4

FCC SAR test exclusion
General SAR test exclusion guidance according to KDB 447498 (Par. 4.3)
Standalone SAR test exclusion considerations:

Unless specifically required by the published RF exposure KDB procedures, standalone 1-g head or body and 10-g extremity SAR evaluation for general population exposure conditions, by measurement or numerical simulation, is not required when the corresponding SAR Test Exclusion Threshold condition(s), listed below, is (are) satisfied. These test exclusion conditions are based on source-based time-averaged maximum conducted output power of the RF channel requiring evaluation, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. The minimum test separation distance defined in 4.1 f) is determined by the smallest distance from the antenna and radiating structures or outer surface of the device, according to the host form factor, exposure conditions and platform requirements, to any part of the body or extremity of a user or bystander. To qualify for SAR test exclusion, the test separation distances applied must be fully explained and justified, typically in the SAR measurement or SAR analysis report, by the operating configurations and exposure conditions of the transmitter and applicable host platform requirements, according to the required published RF exposure KDB procedures. When no other RF exposure testing

RF EXPOSURE EVALUATION

or reporting are required, a statement of justification and compliance must be included in the equipment approval, in lieu of the SAR report, to qualify for SAR test exclusion. When required, the device specific conditions described in the other published RF exposure KDB procedures must be satisfied before applying these SAR test exclusion provisions; for example, handheld PTT two-way radios, handsets, laptops and tablets, etc.

a) For 100 MHz to 6 GHz and test separation distances ≤ 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

$$\left[\frac{\text{max. power of channel, including tune-up tolerance, mW}}{(\text{min. test separation distance, mm})} \right] \cdot \sqrt{f(\text{GHz})} \leq 3.0 \text{ for 1-g SAR, and } \leq 7.5 \text{ for 10-g extremity SAR, where}$$

- $f(\text{GHz})$ is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison
- The values 3.0 and 7.5 are referred to as numeric thresholds in step b) below

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm, and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 4.1 f) is applied to determine SAR test exclusion.

b) For 100 MHz to 6 GHz and test separation distances > 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following (also illustrated in Appendix B):

1) $\{[\text{Power allowed at numeric threshold for 50 mm in step a)}] + [(\text{test separation distance} - 50 \text{ mm}) \cdot (f(\text{MHz})/150)]\}$ mW, for 100 MHz to 1500 MHz

2) $\{[\text{Power allowed at numeric threshold for 50 mm in step a)}] + [(\text{test separation distance} - 50 \text{ mm}) \cdot 10]\}$ mW, for > 1500 MHz and ≤ 6 GHz

c) For frequencies below 100 MHz, the following may be considered for SAR test exclusion (also illustrated in Appendix C):

1) For test separation distances > 50 mm and < 200 mm, the power threshold at the corresponding test separation distance at 100 MHz in step b) is multiplied by $[1 + \log(100/f(\text{MHz}))]$

2) For test separation distances ≤ 50 mm, the power threshold determined by the equation in c) 1) for 50 mm and 100 MHz is multiplied by $\frac{1}{2}$

3) SAR measurement procedures are not established below 100 MHz.

When SAR test exclusion cannot be applied, a KDB inquiry is required to determine SAR evaluation requirements for any SAR test results below 100 MHz to be acceptable.

RF EXPOSURE EVALUATION

CH	Frequency	Max Conducted Output Power (P)		Antenna Gain	Transmission duty cycle	Minimum separation distance	Limit
	(MHz)	(dBm)	(mW)	numerical	(%)	(mm)	/
Low	2402	4.39	2.74	3.428	100	10	≤ 3.0 for 1-g SAR
Middle	2440	4.40	2.75	3.828	100	10	
High	2480	4.52	2.83	3.908	100	10	
FORMULA							
FCC SAR test exclusion condition: Max. power of channel (mW) Min. test separation distance (mm) x √ frequency (GHz)							
VERDICT							
FCC SAR test exclusion condition: 2,74 (mW) 10 (mm) x √ 2,402 (GHz) = 0,421 (≤ 3.0) = PASS 2,75 (mW) 10 (mm) x √ 2,440 (GHz) = 0,429 (≤ 3.0) = PASS 2,83 (mW) 10 (mm) x √ 2,480 (GHz) = 0,445 (≤ 3.0) = PASS
