Support and Registration

A top-down view of the underside of a dark grey, circular robot vacuum cleaner. The device features two large, treaded drive wheels on the left and right sides. In the center, there is a rectangular opening showing the internal roller brush. At the top, there is a central black cylindrical component, likely a sensor or camera, flanked by two small, square white LED lights. A red line originates from the top label on the robot and points towards the top-left corner of the information card on the left.
