1. General Information

1.1 Information of EUT

Product Name	SES-EN (Sensor Extend Solution For Extend Node)
Model Name	DS0-SEEN
Serial No.	None
Type of Sample Tested	Pre-production
Supplied Power for Test	AC 120 V, 60 Hz
Port	6 Pin Connector x 2, 8 Pin Connector
Whether or not ground	Ground

This information was provided by the customer

Clock used	280 MHz	
High Frequency Used	280 MHz	
Model differences		
Model name	Difference	Tested (checked)
DS0-SEEN	Basic Model (the basic model that was fully tested)	☒
DS0-SEENI100	Variant Models Same as the basic model	-

1.2 Applicants Information

Applicant	TOKYO ELECTRON KOREA LIMITED
Address	51, Jangangongdan 6-gil, Jangan-myeon, Hwaseong-si, Gyeonggi-do, 18579 Korea
Telephone No.	+82-31-831-6189
Facsimile No.	+82-31-260-5290
Contact person	Jeong Woon Lee (Ju.lee@tel.com)

2. Information of Testing Laboratory

Test laboratory and address

KOSTEC Co., Ltd.

28(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

Telephone Number: 82-31-222-4251

Facsimile Number: 82-31-222-4252

Registration information

KOLAS No.: KT232

RRA(National Radio Research Agency): KR0041

FCC Designation No.: KR0041

IC Designation No.: KR0041

VCCI Membership No. : 2005

VCCI Registration No. of EMI site: R-14202 / C-14685 / G-10834 / T-12225

Route Map of Measurement Facility

3. Test System Configuration

3.1 Operation Environment

Test Items	Test date	Temp (°C)	Humidity (%R.H.)
Conducted Emissions	Sep. 11	23	51
Radiated Emission (Below 1 GHz)	Jul. 23	23	53
Radiated Emission (Above 1 GHz)	Jul. 24	20	48

3.2 Measurement Uncertainty

Test Items	k_p	Expanded Uncertainty	Note
Conducted Emissions	2	± 3.62 dB	-
Radiated Emission (Below 1 GHz)	2	± 3.62 dB	-
Radiated Emission (Above 1 GHz)	2	± 3.58 dB	-

3.3 Sample calculation

Conducted Emission

The field strength is calculated by adding the LISN factor, cable loss from the measured reading.
The sample calculation is as follows:

FS = MR + Factor
MR = Meter Reading
Factor = Ant. Factor, Cable Loss, etc

If MR is 30 dB, LISN Factor 1 dB, CL 1 dB
The result (MR) is $30 + 1 + 1 = 32$ dB μ V

4. Condition and Procedure for Test activities

4.1 Configuration of EUT

Description	Model or Part No.	Serial No.	Manufacturer
SES-EN (Sensor Extend Solution For Extend Node)	DS0-SEEN	None	TOKYO ELECTRON KOREA LIMITED

4.2 Used Peripherals

Description	Model or Part No.	Serial No.	Manufacturer
SES-DL	DS0-SEDLBS00	DL201911270005	TOKYO ELECTRON KOREA LIMITED
Adaptor (for SES-DL)	ATS065T-P240	None	Adapter technology Co., Ltd.
Sensor	2471025LD2DG2HD	9057358	Setra
SES-EN (Sensor Extend Solution For Extend Node) (Response device)	DS0-SEEN	None	TOKYO ELECTRON KOREA LIMITED

4.3 Used cables

Cable Type	Shield	Length (m)	Ferrite	Connector	Connection Point 1	Connection Point 2
6 Pin Connector	Yes	5.0	No	6 Pin Connector	EUT	SES-DL
6 Pin Connector	Yes	5.0	No	6 Pin Connector	EUT	SES-EN (Sensor Extend Solution For Extend Node) (Response device)
8 Pin Connector	No	1.0	No	8 Pin Connector	EUT	Sensor
DC In	No	1.0	Yes	3 Pin Connector	SES-DL	Adaptor
RJ-45	No	10.0	No	RJ-45	SES-DL	Notebook

4.4 EUT Test Configuration

4.5 Operating conditions

After setting, each I/O Ports of EUT was connected to peripherals.
 After that, the EUT were observed on continuously operating conditions.

* Notebook Program : Data logger setting tool

5. Summary of Test Results

5.1 Modification to the EUT

-

5.2 Summary of Test Results

The following tests were performed on a sample submitted for evaluation of compliance with FCC Part 15 Subpart B

Clause	Test Requirement	Result
15.107	Conducted Emissions	Pass
15.109	Radiated Emission (Below 1 GHz)	Pass
15.109	Radiated Emission (Above 1 GHz)	Pass

Note 1) N/A mean is Not Applicable.

Note 2) Decision rule: The statement of conformity in this report was judged according to the specification limits of the standard without considering uncertainty.

Note 3) This equipment has been shown to be in compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-2014

6. Test Results

6.1 Conducted Emission

6.1.1 Measurement procedure

In the range of 0.15 MHz to 30 MHz, the conducted disturbance was measured and set-up was made accordance with ANSI C63.4.

If the EUT is table top equipment, it was placed on a wooden table with a height of 0.8 m above the reference ground plane and 0.4 m from the conducting wall of the shielded room.

Also if the EUT is floor-standing equipment, it was placed on a non-conducted support with a height up to 0.15 m above the reference ground plane.

Connect the EUT's power source lines to the appropriate power mains / peripherals through the LISN. All the other peripherals are connected to the 2nd LISN, if any.

Unused measuring port of the LISN was resistively terminated by 50 ohm terminator.

The measuring port of the LISN for EUT was connected to spectrum analyzer.

Using conducted emission test software, the emissions were scanned with peak detector mode.

After scanning over the frequency range, suspected emissions were selected to perform final measurement. When performing final measurement, the receiver was used which has Quasi-Peak detector and Average detector.

By varying the configuration of the test sample and the cable routing it was attempted to maximize the emission.

For further description of the configuration refer to the picture of the test set-up.

6.1.2 Limit for conducted emission

(1) Conducted emission at mains ports.

Frequency range [MHz]	Limits [dB(μV)]			
	Quasi-peak		Average	
	Class A	Class B	Class A	Class B
0.15 to 0.50	79	66 to 56	66	56 to 46
0.50 to 5	73	56	60	46
5 to 30		60		50
Note 1 The lower limit shall apply at the transition frequencies.				
Note 2 The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.				

Note) 1. Emission level = Reading value + Correction factor.

2. Correction factor = Cable loss + Insertion loss of LISN

3. Margin = Limit - Emission level

6.1.3 Used equipment

6.2 Radiated Emission

6.2.1 Measurement procedure

The radiated disturbance was measured and set-up was made accordance with ANSI C63.4. If the EUT is tabletop equipment, it was placed on a wooden table with a height of 0.8 m above the reference ground plane and 3 m or 10 m away from the interference receiving antenna in the 10 m semi-anechoic chamber.

Also if the EUT is floor-standing equipment, it was placed on a non-conducted support with a height up to 0.15 m above the reference ground plane.

Rotate the EUT from (0 - 360)° and position the receiving antenna at heights from (1 - 4) m above the reference ground plane continuously to determine associated with higher emission levels and record them.

The measurement was made in both the vertical and horizontal polarization, and the maximum value is presented in the report.

For below 1 GHz frequency range, Quasi-Peak detector with 120 kHz RBW was used.

Also Peak and Average detector with 1 MHz RBW were used for above 1 GHz frequency range.

For further description of the configuration refer to the picture of the test set-up.

6.2.2 Limit for Radiated emission

- The test frequency range of Radiated disturbance measurements are listed below.

Highest frequency generated or used in the device or on which the device operates or tunes [MHz]	Upper frequency of measurement range [MHz]
Below 108	1 000
108 – 500	2 000
500 – 1 000	5 000
Above 1 000	5 th harmonic of the highest frequency or 40 GHz, whichever is lower

(1) Limit for Radiated emission below 1 000 MHz

Frequency range [MHz]	Class A Equipment (10 m distance)	Class B Equipment (3 m distance)
	Quasi-peak [dB(μV/m)]	Quasi-peak [dB(μV/m)]
30 to 88	39.1	40
88 to 216	43.5	43.5
216 to 960	46.4	46
960 to 1 000	49.5	54
Note 1 The lower limit shall apply at the transition frequency. Note 2 Additional provisions may be required for cases where interference occurs. Note 3 According to 15.109(g), as an alternative to the radiated emission limit shown above, digital devices may be shown to comply with the standards(CISPR), Pub. 22 shown as below.		
Frequency range [MHz]	Class A Equipment (10 m distance)	Class B Equipment (10 m distance)
	Quasi-peak [dB(μV/m)]	Quasi-peak [dB(μV/m)]
30 to 230	40	30
230 to 1 000	47	37

(2) Limits for Radiated emission above 1 000 MHz at a measuring distance of 3 m

Frequency [GHz]	Class A Equipment		Class B Equipment	
	Peak [dB(μV/m)]	Average [dB(μV/m)]	Peak [dB(μV/m)]	Average [dB(μV/m)]
1 to 40	80	60	74	54

- Note) 1. Emission level = Reading value + Correction factor.
 2. Correction factor = Cable loss - Amp gain + Antenna factor + Distance compensation value
 3. Margin = Limit - Emission level
