

Original module (FCC ID: XMR2020BG95M1)	The modules referenced by the entire sample																																												
																																													
Model No: BG95-M1 uses the same module without any modification. The reference module conducted data, and the power should be within ±0.5 to ensure the rationality of the data. The entire sample did not use LTE Band 14, this band was disabled through the software.																																													
When the radiation antenna was changed, we evaluated all the radiation test cases. RF Power Output and Effective Radiated Power Radiated Spurious Emission Radiated Emission Conducted Emission The antenna gain is as follows:
