

Uninstall an app using adb

To remove the app use `adb remove org.myorg.appname`

```
1 $ adb remove org.myorg.appname
2 Success
```

Installing QGC

Installing SDK Platform-Tools

Ensure you have latest [platform-tools](#) installed on your computer system.

If you do not have the SDK "platform-tools" installed on your computer, download it from this link and keep track where the "platform-tools" folder is located:

SDK Platform Tools release notes | Android Developers
Android Developers

Connect the HereLink Blue to a computer

Enable "Developer Mode" on the HereLink Blue by navigating to **Settings -> About Phone -> Build Number** and tap at least 7 times on "Build Number."

Swipe down on the screen and click the "gear" icon for settings

Click "About Phone" in the settings window

Click on the Build Number at least 7 times until the "Developer Mode" screen message is displayed

Enable Settings -> Developer options -> USB debugging

About phone
Android 7.1.2

Click "Developer Options" in settings

Toggle USB debugging to "On"

Using a USB to Micro USB cable, plug the DataLink into a computer and open the computer's terminal command line

Open the Terminal

For Windows, navigate to the "platform-tools" folder. In this folder, hold **down Shift and then right-click**. From the menu select the "**Open Command window here**" option. If the option to open the command window is not available, then click on the "open PowerShell window here".

Windows

For Mac, navigate to the "platform-tools" folder. **Right Click** the folder and select **Services -> New Terminal at Folder**

Mac

Check if the unit is connected

Using the computer's terminal, check if the device is connected via the adb command protocol:

Mac:

- 1 `adb devices`
- 2

Mac

Windows:

- 1 `.\adb devices`
- 2

```
RFS3Y18827021859 device  
PS D:\platform-tools>
```

Windows

Download QGC APK

Click the link below to download the Android 64 bit QGC .apk to your computer:

<https://qgroundcontrol.s3-us-west-2.amazonaws.com/latest/QGroundControl64.apk>

Move the .apk file to the SDK "platform-tools" folder on your computer

Installing QGC to the DataLink

Install QGroundControl using `adb install QGroundControl64.apk` in your computers terminal

Mac:

- 1 `adb install QGroundControl64.apk`
- 2

A screenshot of a macOS terminal window titled "platform-tools - bash - 80x24". The terminal shows the following output:

```
Last login: Fri Feb 26 11:13:32 on ttys001

The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.
MacbookPro13:platform-tools MacbookPro13$ adb devices
List of devices attached
6c63b209      device

MacbookPro13:platform-tools MacbookPro13$ adb install QGroundControl64.apk
Performing Streamed Install
Success
MacbookPro13:platform-tools MacbookPro13$
```

Mac adb install

Windows:

- 1 `.\adb install QGroundControl64.apk`
- 2

A screenshot of a Windows PowerShell window titled "Windows PowerShell". The terminal shows the following output:

```
PS C:\platform-tools> .\adb install QGroundControl64.apk
Performing Streamed Install
Success
PS C:\platform-tools>
```

QGC should now appear in the app launcher's list.

Important Notes & Warnings

- Rover Unit power input: 5V - 12.6V max (3s Lipo supported). Any power range above 12.6V will burn the device.
- The temperature will rise when the Rover Unit is connected with the Ground Station. The temperature of the Rover Unit can be checked on the Ground Station side, and should be lower than 70°C. If the temperature is over 70°C with normal use, installing an active cooling fan is recommended.
- Never power the Rover Unit without the antennas plugged in. Powering on the Rover Unit without the antennas plugged in will result in overheating.

Caution: The user is cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules and Industry Canada licence-exempt RSS standard(s). Operation is subject to the following conditions:

1. this device may not cause harmful interference.
2. this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC & IC Radiation Exposure Statement:

This equipment complies with the FCC and Canada radiation exposure limits set forth for an uncontrolled

environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

For Air Unit: The equipment should be installed and operated with a minimum distance of 20cm between the radiator and your body.

Update Firmware

Update Ground Station

Connect your DataLink to a 5.8GHz WIFI and make sure an internet connection is available

Pull down from the top and select the settings cog in the top corner or click the **Update Available** tab

Scroll to the bottom and click the **About Phone** option

Select **System Update**

Select **CHECK FOR UPDATE** in the bottom corner

Select UPDATE in the bottom corner

The system will update and install

Update Error

There are 3 things the need to be checked if you receive an error

1. You are connected to stable WIFI
2. The device time/date is correct
3. You entered the correct Key

Update Air Unit

In the **Radio Settings** menu, select **AIRUNIT** tab. The app will download the settings from the air unit and search online to see if there is an update available.

Select **DOWNLOAD AIR FIRMWARE** tab.

The Air Unit Firmware will start downloading to the Ground Station.

Once downloading is complete, select the `TRANSFER TO AIRUNIT` tab.

The downloaded firmware will start to transfer to the Air Unit.

Once the transfer is complete, select the **UPDATE AIRUNIT** tab.

The new Air Unit firmware will be installed on the Air Unit.

Once complete, click anywhere on the screen outside the grey box to continue.

Bug Report

Create a Bug Report from the Ground Station

Navigate to the home screen on the Ground Station and click the **App** icon in the lower right hand side of the screen.

Click the **Phone** app.

Click an item to launch it. Long-press an item to see options for it.

Dial *##*#284#*##* , when complete, the system will automatically start generating a bug report.

Plug the Ground Station into a PC using a USB micro cable.

When plugged into a PC, swipe down on the top of the middle of the screen on the Ground Station to pull down the menu bar. Select **USB charging this device** to change the USB settings.

Select **Transfer files** to change the USB settings to allow the Ground Station to act as a storage device when connected to a PC.

On the PC navigate to the **Optimus** folder, then navigate to the **debug_log** folder to access the bug report zip file.

Email us the bug report support@union-robotics.com

HereLink Blue FAQs

Can the language on the controller be switched?

The system language can be switched in the slide down menu.

Why aren't the LEDs lit, even though the rover unit are correctly connected?

Check the power input. It should be 5V - 12.6V max (3s Lipo supported) and the battery should be charged.

Why can't I connect to 2.4GHz WIFI?

Currently, the Datalink only enables 5.8GHz WIFI for internet connection. Therefore, to load maps, you will need to connect to a 5.8GHz WIFI network.

Does the HereLink Blue have data encryption?

The HereLink Blue encryption over the air uses aes-128-ctr
