Quick Start Guide

Welcome to Vulcan

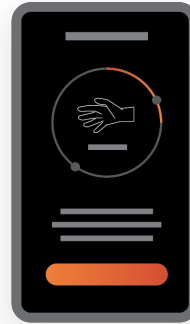

The Vulcan Control Band is a wearable device that can detect hand gestures, arm movement, and compass bearing.

With the Vulcan Control Band, you can use hand gestures to perform vital ATAK commands without viewing or interacting with a mobile device screen.

1

Download and open the Vulcan app to begin onboarding

The Vulcan app will guide you through donning the Vulcan Control Band, setup, and calibration so you can start using the Control Band. Once the Control Band is calibrated, you can move to the ATAK plug-in.

Minimum App Requirements: Samsung S9 or later mobile device with Android version 8.0 or later

2

Download and install the Vulcan ATAK plug-in

Open the Vulcan ATAK plug-in and go to the Gesture Resources section to learn about the ATAK commands you can control with hand gestures.

The Vulcan ATAK plug-in is compatible with the ATAK version of the same number (ex: ATAK 4.3.0 requires Vulcan ATAK plug-in 4.3.0)
