2.4. Conclusion 17

2. Performance of Prototype antenna

Prototype antenna for DECT bands (1880-1930 MHz) for mounting inside customer device was developed. Casing of the device is from plastic material. Display in top casing is connected to PCB using ribbon cable (not seen in pictures). Three slide-in holders on each side are made to hold the antennas. Antennas were placed in said holders and were connected to PCB using 9.5 cm long MC137 cable with UFL connector. To obtain the best results cable routing is critical. Cable for Antenna 1 should be routed over top PCB and cable for Antenna 2 should be routed away from ribbon cable (as seen in pictures below).

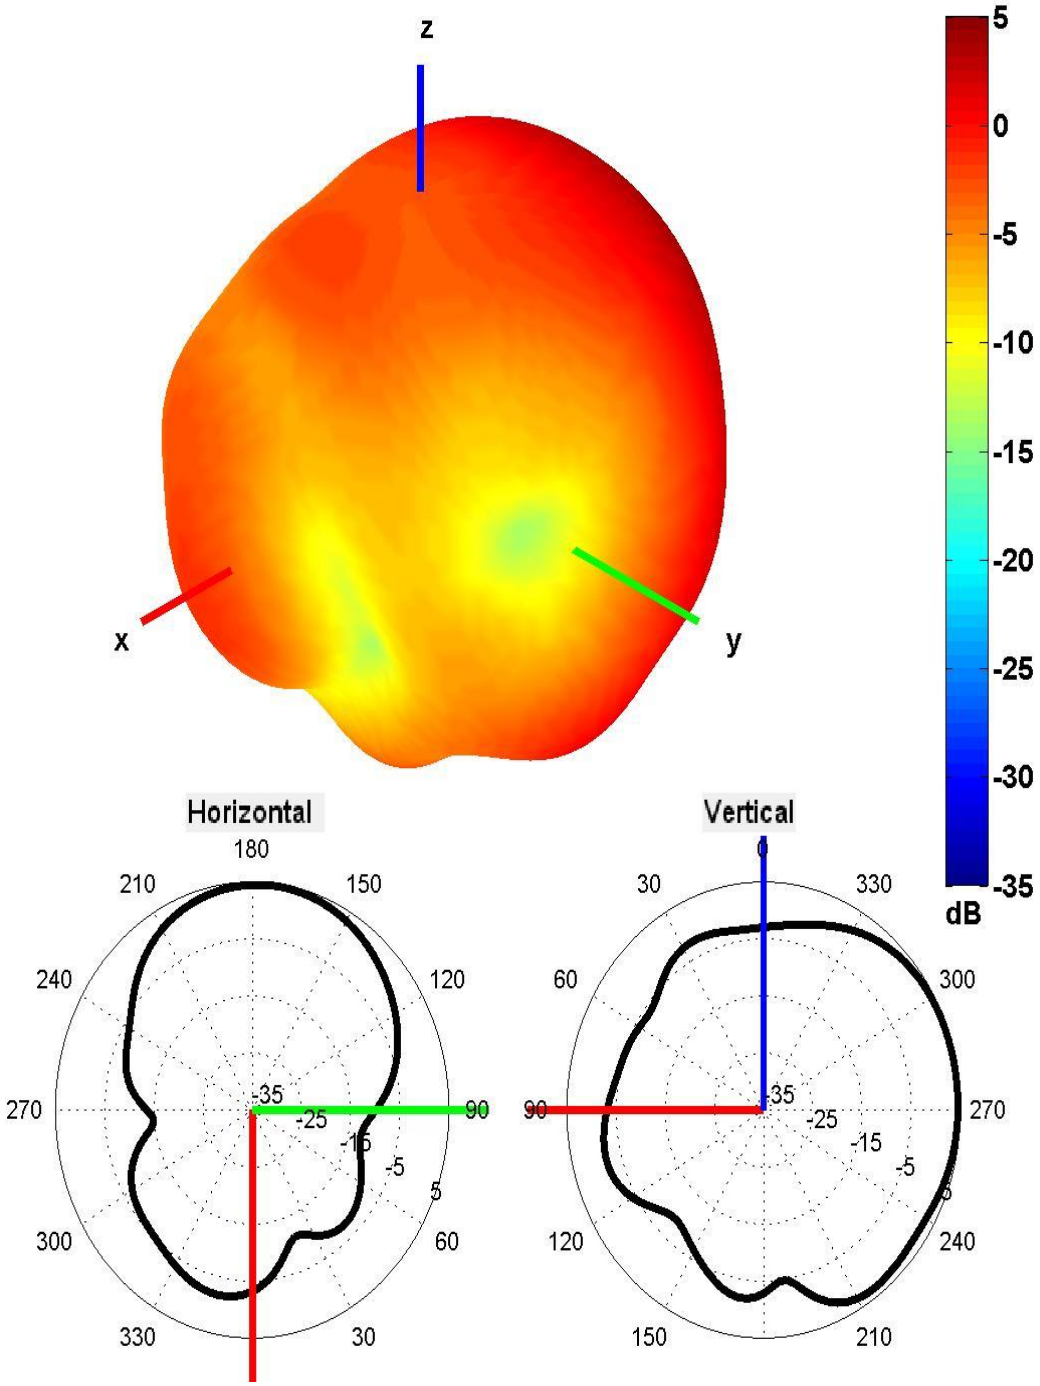
2.3.4. Radiation Pattern



Radiation Pattern at 1900MHz

2.4. Conclusion

Prototype antenna was developed for DECT bands (1880-1930 MHz) in respect to placement inside customer device. To achieve best results a cable routing as it is seen in pictures is critical to minimize coupling to nearby objects (main PCB and ribbon cable). Difference between radiation patterns is due to presence of ribbon cable near antenna 2.

Manufacturer name: 2J Antennas
Address: Stefanikova 61, 085 01 Bardejov, Slovakia
FCC Antenna gain: 4.4 dBi
Antenna type: PCB
Antenna model: SI326100548
