

AXT1800 Project, antenna material requirements specification

Customer name: Shenzhen Guanglian Zhitong Technology Co., LTD

Customer product name: AXT1800

Product name: R-PCB ultra-sound antenna assembly on the right

Product specification: ultrasonic supply material, PCB + coaxial welding wire-right R

Material code: 205-2039

1. Overview

1.1 Scope of application

This requirement specifies the antenna technical requirements and material requirements specifications for AXT1800 products.

This requirement is applicable to the antenna selection, testing and acceptance of AXT1800 products.

1.2 Project basic information

Antenna name:	AXT1800
Antenna band:	WIFI-2.4G/5.8G
Antenna material:	PCB + coaxial welding line-R
Antenna version:	V0.1

2. Technical index requirements

2.1 Introduction of test items and equipment

inventory	test item	equipment
S11 parameter	Standing wave ratio, echo loss	network analyzer
Active test	TRP,TIS	Integrated tester, microwave darkroom
Passive test	Gain, efficiency	network analyzer

2.2.1 Test instructions

Test tools: Agilent8960 instrument, R & S CMW500, full wave far field ETS dark room, high precision positioning system and its controller and computer with automatic test program

Test environment: temperature $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$, humidity $50\% \pm 15\%$

Test method: DUT is fixed in the center of the turntable with H plane, on the same horizontal line as the center of the horn antenna. The positioning system enables the DUT to rotate in the whole sphere to satisfy the high-precision 3 D positioning. Each RF instrument and turntable controller communicate with the PC with automatic test software through the GPIB interface

2.2.2 Antenna passive data (efficiency)
