

AquaAmp

INSTALLATION INSTRUCTIONS SEASOCKET

PARTS PROVIDED

Screws (3x)

SeaSocket Cup Holder

TOOLS REQUIRED

3.75" Hole Saw

Electric Drill

INSTALLATION GUIDE

01

STEP 1: Drill or Cut 3.75" hole.

02

STEP 2: Insert SeaSocket into hole and either use the included self tapping screws for a permanent installation or use the ring of nuts (sold separately) with predrilled 5/32" holes for a removable installation.

03

STEP 3: Snap on metal bezel to cover screw heads.

04

STEP 4: Using a 30A fuse, attach wires to a 12V power supply and ensure there is a waterproof connection. Optionally, attach RGB wires to an external PWM light controller.

05

STEP 5: Secure flexible drain tubing onto the nipple fitting using a hose clamp, then route the tubing to an appropriate drain location such as a through-hull above the waterline or the bilge.

06

STEP 6: Verify correct installation by inserting an authorized accessory into the cup holder and checking for power.

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Note: The Grantee is not responsible for any changes or modifications not expressly approved by the party responsible for compliance. Such modifications could void the user's authority to operate the equipment.

The device has been evaluated to meet general RF exposure requirement.

To maintain compliance with FCC's RF exposure guidelines, the distance must be at least 20 cm between the radiator and your body, and fully supported by the operating and installation configurations of the transmitter and its antenna(s).
