

# FCC Test Report

Test report

On Behalf of

Shenzhen Anya Video Technology Co., Ltd.

For

WIFI camera

Model No.: Q20, Q00, Q10, Q11, Q12, Q13, Q14, Q15, Q16, Q17,  
Q18, Q19, H611, H612, H613, H614, H615, H616, H617, H618,  
H619, SE2000, SE3000, SE4000, SE5000, SE6000, SE7000,  
SE8000, AY01, AY02, AY03, AY04, AY05, AY06, AY07, AY08, AY09

FCC ID: 2A6AK-Q20

Prepared For : Shenzhen Anya Video Technology Co., Ltd.  
B 1320, Huachuangyun, No. 1998, Gangtou Jiaxian Road, Bantian Street,  
Longgang District, Shenzhen, Guang dong, China

Prepared By : Shenzhen HUAK Testing Technology Co., Ltd.  
1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping,  
Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

Date of Test: Jan. 09, 2024 ~ Jan. 16, 2024

Date of Report: Jan. 16, 2024

Report Number: HK2401090178-E

## Test Result Certification

**Applicant's name** .....: Shenzhen Anya Video Technology Co., Ltd.  
**Address** .....: B 1320, Huachuangyun, No. 1998, Gangtuo Jiaxian Road,  
Bantian Street, Longgang District, Shenzhen, Guang dong, China  
**Manufacturer's Name** .....: Shenzhen Anya Video Technology Co., Ltd.  
**Address** .....: B 1320, Huachuangyun, No. 1998, Gangtuo Jiaxian Road,  
Bantian Street, Longgang District, Shenzhen, Guang dong, China

### Product description

**Trade Mark:** Anyazhineng  
**Product name**.....: WIFI camera  
**Model and/or type reference** : Q20, Q00, Q10, Q11, Q12, Q13, Q14, Q15, Q16, Q17, Q18, Q19,  
H611, H612, H613, H614, H615, H616, H617, H618, H619,  
SE2000, SE3000, SE4000, SE5000, SE6000, SE7000, SE8000,  
AY01, AY02, AY03, AY04, AY05, AY06, AY07, AY08, AY09  
**Standards** .....: FCC Rules and Regulations Part 15 Subpart C Section 15.247  
ANSI C63.10: 2013

Shenzhen HUAKE Testing Technology Co., Ltd. takes no responsibility for and will not assume liability for damages resulting from the reader's interpretation of the reproduced material due to its placement and context.

**Date of Test** .....:   
**Date (s) of performance of tests** .....: Jan. 09, 2024 ~ Jan. 16, 2024  
**Date of Issue**.....: Jan. 16, 2024  
**Test Result**.....: Pass

## 1. Test Result Summary

### 1.1. Test Procedures and Results

| Requirement                      | CFR 47 Section        | Result |
|----------------------------------|-----------------------|--------|
| Antenna requirement              | §15.203/§15.247(b)(4) | PASS   |
| AC Power Line Conducted Emission | §15.207               | PASS   |
| Conducted Peak Output Power      | §15.247(b)(3)         | PASS   |
| 6dB Emission Bandwidth           | §15.247(a)(2)         | PASS   |
| Power Spectral Density           | §15.247(e)            | PASS   |
| Band Edge                        | §15.247(d)            | PASS   |
| Spurious Emission                | §15.205/§15.209       | PASS   |

**Note:**

1. PASS: Test item meets the requirement.
2. Fail: Test item does not meet the requirement.
3. N/A: Test case does not apply to the test object.
4. The test result judgment is decided by the limit of test standard.

### 1.2. Information of the Test Laboratory

Shenzhen HUAKE Testing Technology Co., Ltd.

Add.: 1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

Testing Laboratory Authorization :

A2LA Accreditation Code is 4781.01.  
FCC Designation Number is CN1229.  
Canada IC CAB identifier is CN0045.  
CNAS Registration Number is L9589.

### 1.3. Measurement Uncertainty

The reported uncertainty of measurement  $y \pm U$ , where expanded uncertainty  $U$  is based on a standard uncertainty multiplied by a coverage factor of  $k=2$ , providing a level of confidence of approximately 95 %.

| No. | Item                          | MU                        |
|-----|-------------------------------|---------------------------|
| 1   | Conducted Emission            | $\pm 2.71\text{dB}$       |
| 2   | RF power, conducted           | $\pm 0.37\text{dB}$       |
| 3   | Spurious emissions, conducted | $\pm 0.11\text{dB}$       |
| 4   | All emissions, radiated(<1G)  | $\pm 3.90\text{dB}$       |
| 5   | All emissions, radiated(>1G)  | $\pm 4.28\text{dB}$       |
| 6   | Temperature                   | $\pm 0.1^{\circ}\text{C}$ |
| 7   | Humidity                      | $\pm 1.0\%$               |

## 2. EUT Description

### 2.1. General Description of EUT

|                      |                                                                                                                                                                                                                           |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Equipment:           | WIFI camera                                                                                                                                                                                                               |
| Model Name:          | Q20                                                                                                                                                                                                                       |
| Series Model:        | Q00, Q10, Q11, Q12, Q13, Q14, Q15, Q16, Q17, Q18, Q19, H611, H612, H613, H614, H615, H616, H617, H618, H619, SE2000, SE3000, SE4000, SE5000, SE6000, SE7000, SE8000, AY01, AY02, AY03, AY04, AY05, AY06, AY07, AY08, AY09 |
| Model Difference:    | All model's the function, software and electric circuit are the same, only with a product model named different. Test sample model: Q20.                                                                                  |
| FCC ID:              | 2A6AK-Q20                                                                                                                                                                                                                 |
| Antenna Type:        | Steel Patch Antenna                                                                                                                                                                                                       |
| Antenna Gain:        | 2.5dBi                                                                                                                                                                                                                    |
| Operation frequency: | 802.11b/g/n 20:2412~2462 MHz<br>802.11n 40: 2422~2452MHz                                                                                                                                                                  |
| Number of Channels:  | 802.11b/g/n20: 11CH<br>802.11n 40: 7CH                                                                                                                                                                                    |
| Modulation Type:     | CCK/OFDM/DBPSK/DAPSK                                                                                                                                                                                                      |
| Power Source:        | DC 5V From Type-C                                                                                                                                                                                                         |
| Power Rating:        | DC 5V From Type-C                                                                                                                                                                                                         |

## 2.2. Carrier Frequency of Channels

| Channel List For 802.11b/802.11g/802.11n (HT20) |                 |         |                 |         |                 |         |                 |
|-------------------------------------------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|

| Channel List For 802.11n (HT40) |                 |         |                 |         |                 |         |                 |
|---------------------------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| Channel                         | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| --                              | --              | 04      | 2427            | 07      | 2442            | --      | --              |
| --                              | --              | 05      | 2432            | 08      | 2447            | --      | --              |
| 03                              | 2422            | 06      | 2437            | 09      | 2452            | --      | --              |

**Note:**

*In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:*

## 2.3. Operation of EUT During Testing

### Operating Mode

**The mode is used: Transmitting mode for 802.11b/802.11g/802.11n (HT20)**

Low Channel: 2412MHz

Middle Channel: 2437MHz

High Channel: 2462MHz

**The mode is used: Transmitting mode for 802.11n (HT40)**

Low Channel: 2422MHz

Middle Channel: 2437MHz

High Channel: 2452MHz

## 2.4. Description of Test Setup

Operation of EUT during testing:

The sample was placed (0.8m below 1GHz, 1.5m above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages. The worst case is X position.

## 2.5. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Item | Equipment   | Trade Mark  | Model/Type No. | Specification                                                                        | Remark      |
|------|-------------|-------------|----------------|--------------------------------------------------------------------------------------|-------------|

|      |             |             |                |                                                                                      |             |

**Note:**

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.
3. For conducted measurements (Output Power, 6dB Emission Bandwidth, Power Spectral Density, Spurious Emissions), the antenna of EUT is connected to the test equipment via temporary antenna connector, the antenna connector is soldered on the antenna port of EUT, and the temporary antenna connector is listed in the Test Instruments.

### 3. General Information

#### 3.1. Test Environment and Mode

| Operating Environment:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                           |

| Engineering mode:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Keep the EUT in continuous transmitting by select channel and modulations |
| <p>The sample was placed (0.8m below 1GHz, 1.5m above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y &amp; Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages. For the full battery state and The output power to the maximum state.</p> |                                                                           |

We have verified the construction and function in typical operation. All the test modes were carried out with the EUT in transmitting operation, which was shown in this test report and defined as follows:

**Per-scan all kind of data rate in lowest channel, and found the follow list which it was worst case.**

| Mode         | Data rate |
|--------------|-----------|
| 802.11b      | 1Mbps     |
| 802.11g      | 6Mbps     |
| 802.11n(H20) | 6.5Mbps   |
| 802.11n(H40) | 13.5Mbps  |

**Final Test Mode:**

|                 |                                                         |
|-----------------|---------------------------------------------------------|
| Operation mode: | Keep the EUT in continuous transmitting with modulation |
|-----------------|---------------------------------------------------------|

1. For WIFI function, the engineering test program was provided and enabled to make EUT continuous transmit/receive.

2. According to ANSI C63.10 standards, the test results are both the “worst case” and “worst setup” 1Mbps for 802.11b, 6Mbps for 802.11g, 6.5Mbps for 802.11n(H20), 13.5Mbps for 802.11n(H40).

**3. Mode Test Duty Cycle**

| Mode         | Duty Cycle | Duty Cycle Factor (dB) |
|--------------|------------|------------------------|
| 802.11b      | 0.995      | -0.02                  |
| 802.11g      | 0.99       | -0.04                  |
| 802.11n(H20) | 0.98       | -0.09                  |
| 802.11n(H40) | 0.98       | -0.09                  |

Test plots as follows:

## 802.11b

## 802.11g

## 802.11n(H20)

## 802.11n(H40)

## 4. Test Results and Measurement Data

### 4.1. Conducted Emission

#### Test Specification

| Test Requirement:        | FCC Part15 C Section 15.207                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                          |              |  |            |         |          |           |           |       |    |    |      |    |    |

| Test Procedure:          | <div><div>1. The E.U.T is connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment.</div><div>2. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</div><div>3. Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.</div></div> |                          |              |  |            |         |          |           |           |       |    |    |      |    |    |
| Test Result:             | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                          |              |  |            |         |          |           |           |       |    |    |      |    |    |

| <b>Test Mode:</b>        | Transmitting mode with modulation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Test Procedure:</b>   | <ol style="list-style-type: none"><li>1. The testing follows FCC KDB Publication 558074 D01 15.247 Meas Guidance v05r02.</li><li>2. The RF output of EUT was connected to the spectrum analyzer by RF cable and attenuator. The path loss was compensated to the results for each measurement.</li><li>3. Set to the maximum power setting and enable the EUT transmit continuously.</li><li>4. Set RBW = 100 kHz, VBW=300 kHz, Peak Detector. Unwanted Emissions measured in any 100 kHz bandwidth outside of the authorized frequency band shall be attenuated by at least 20 dB relative to the maximum in-band peak PSD level in 100 kHz when maximum peak conducted output power procedure is used. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, the attenuation required under this paragraph shall be 30 dB instead of 20 dB per 15.247(d).</li><li>5. Measure and record the results in the test report.</li><li>6. The RF fundamental frequency should be excluded against the limit line in the operating frequency band.</li></ol> |
| <b>Test Result:</b>      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
