

## IX.Cleaning the Printer

### 9.1 Cleaning the Printer Head

**Clean the print head when one of the following conditions occurs to the printer:**

- (1) Printing is not clear.
- (2) A vertical column of the printed page is not clear.
- (3) The paper feeding noise is high.

**The print head cleaning steps are as follows:**

- (1) Turn off the power supply of the printer, , open the upper cover and remove the paper if exists.
- (2) If printing has just been completed, wait for the print head to cool completely.
- (3) Clean the printer head with a soft cotton moistened with ethyl alcohol.
- (4) After waiting for absolute ethyl alcohol to volatilize completely, close the upper cover and try printing again.

### 9.2 Cleaning the Sensor

**Clean the paper shortage sensor when one of the following conditions occurs to the printer:**

- (1) In the printing process, the printer occasionally stops printing and alarms for paper shortage.
- (2) No alarm for paper shortage.

**The paper shortage sensor cleaning steps are as follows:**

- (1) Turn off the power supply of the printer, open the upper cover, and remove the paper if there is any.
- (2) Wipe off the dust and stain on the sensor surface with soft cotton cloth (which should be dried) dipped in absolute ethyl alcohol.
- (3) After waiting for absolute ethyl alcohol to volatilize completely, close the upper cover and try to start the machine again.

### 9.3 Cleaning the Printing Rubber Roller

**When one of the following conditions occurs to the printer, the printing rubber roller should be cleaned:**

- (1) Printing is not clear.
- (2) A vertical column of the printed page is not clear.
- (3) The paper feeding noise is high.

**The printing Rubber Rollers cleaning steps are as follows:**

- (1) Turn off the power of the printer and open the upper cover.
- (2) Use a soft cotton cloth (which should be dried) dipped in a neutral detergent to wipe off dust and stains on the surface of the printing rubber roller.
- (3) Close the upper cover after the cleaning agent is completely volatilized.

#### **Attention:**

- (1) The power supply must be turned off during the daily maintenance of the printer.
- (2) Do not touch the surface of the print head with hands and metal objects, and do not scratch the surface of the print head, printing rubber roller and sensor with tweezers and other tools.
- (3) The organic solvents such as gasoline and acetone shall not be used.
- (4) Wait until absolute ethyl alcohol is completely volatilized, then turn on the power supply to continue printing.

# X. Troubleshooting

The table below shows common problems and solutions for operators.

If you have followed the simple troubleshooting methods but the printer is still not functioning properly, please contact the customer service department of your dealer for assistance.

| Fault Phenomenon         | Cause                                                                                                                                                               | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POWER indicator is off   | a. The AC plug and the power supply plug are not properly connected to the printer socket.<br>b. The printer power switch is not on.                                | a. Check the power connection and confirm that the AC plug and the power supply plug are properly connected to the printer socket.<br>b. Turn on the printer.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Unable to print          | a. The communication cable is not properly connected to the printer and PC host.<br>b. Communication interface setting error.<br>c. Print status error.             | a. Reconnect the communication cable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Incomplete print content | a. The paper is not centered.<br>b. Label size setting is incorrect.                                                                                                | a. Adjust the paper position.<br>b. Set the correct label size.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Incorrect positioning    | a. Label learning is not performed.<br>b. Seam label detection photocoupler is offset.<br>c. Wrong mode selected.                                                   | a. Label learning is performed.<br>b. Open the cover to confirm whether the seam label detection component is offset.<br>For black label paper, move the seam label detection component according to the black label position so that the detection photocoupler can detect the black label.<br>Label paper/continuous paper: The detection photocoupler must be in the paper range.<br>c. Use the setting tool to open the printer information and confirm whether the paper type is the same as the paper loaded in the printer, which can be changed by using the setting tool. |
| Poor print result        | a. Paper loading error.<br>b. Print density/speed setting error.<br>c. Print head/rubber roller has dust or adhesive accumulation.<br>d. The print head is damaged. | a. Reload the paper.<br>b. Readjust the print density/speed of printer by using the setting tool or the software.<br>Printing density can be coarsely tuned with the setting tool and finely tuned with the driver.<br>c. Clean the print head/rubber roller.<br>(refer to 8.1 "Cleaning Print Head"/8.2 "Cleaning Sensor"/8.3 "Cleaning Printing Rubber Roller" of the Manual.)<br>d. Use the setting tool to detect bad point of head piece. If the print head is damaged, please contact the customer service department of your dealer for repairs.                            |

## XI. Setting Integration Tool Manual

### 11.1 Connection Test

The operation display is as follows:

According to the model interface, select U or other port or driver port to connect the printer, and click [Connection Test]. If the following figure is displayed successfully, it means that the printer has been connected.

(if connection fails, please reinstall the communication cable and check the communication settings.)

## 11.2 Display Printer Information

Click [Display Printer Information] to view the basic information of the current printer.

## 11.3 Download

When the firmware version of the printer is low or not ideal, click [Download]. The dialog box shown below is displayed. Click [Select Program File] to select the program, and then click [Update]. The printer light is off for about 3s, and a sheet of paper will be fed after the printer is automatically turned on. You can check the printer information to confirm whether the update is successful.

If you want to change the font, select [Font Library], click [Open File] to select the font, and then click [Update]; after the printer beeps once, the font is successfully updated.

## 11.4 Set Printer

### 11.4.1 Print set

Click [Set Printer] to pop up the window shown in the figure below. You can change the basic parameters in the print setting interface.

The function details are as follows

| Submenu                             | Description                                                                                                            | Parameter description<br>(parameter order is<br>consistent with<br>description) | Defaults |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|----------|
| Print Type                          | Thermal ribbon                                                                                                         | 0~1                                                                             | 1        |
| Automatic position<br>when power on | Enable/disable                                                                                                         | 0~1                                                                             | 1        |
| Label height                        | Max label height<br>supported                                                                                          | 30~400mm<br>(Two bytes)                                                         | 400      |
| Paper type                          | Continuous paper,<br>label paper,<br>and black-marked paper                                                            | 0~2                                                                             | 1        |
| Reprint when Error                  | Enable/disable                                                                                                         | 0~1                                                                             | 1        |
| Special label                       | Enable/disable                                                                                                         | 0~1                                                                             | 0        |
| Print Speed                         | Speed setting                                                                                                          | 0~9                                                                             | 5        |
| Darkness setting                    | Density setting                                                                                                        | 0~15                                                                            | 8        |
| Horizontal Origin                   | Adjust the horizontal<br>print start position                                                                          | Adjust the horizontal<br>start coordinate<br>option: (+00 - +89) point          | 0        |
| Vertical Origin                     | Adjust the vertical<br>coordinate of print<br>start position                                                           | Adjust the vertical<br>start coordinate<br>option: (+00 - +89) point            | 0        |
| Print To stop                       | Locate the regular,<br>paper tearing and cutter<br>positions<br>(take the paper tearing<br>position as the zero point) | Set label stop position<br>option: (-89 - +89) point                            | 0        |
| Prevent Glue Paper                  | If specified time is<br>exceeded, feed paper<br>back and forth before<br>printing the first sheet                      | Start 0 - 255 minutes<br>after stopping printing                                | 0        |

### 11.4.2 Label Calibration:

When the printer is ready, switch to the label calibration screen.  
(As shown in the figure below) :

- a. Automatic label learning: Recognize the specifications of the newly loaded paper through learning.
- b. Paper shortage learning: If paper shortage prompt occurs when there is paper or the seam cannot be found while label learning, you can click [Paper Shortage Learning] when there is no paper and the cover is closed. Finally, reload the paper for automatic label learning.

### 11.4.3 Print test

Switch to print test screen.(As shown in the figure below)

- a. Debug mode: The mode is disabled by default. After enabling this mode, the printer prints the original data sent to facilitate finding errors;
- b. Print head bad point detection: When the printer is ready, click [Detect] to check whether the print head is normal. If not, the number of bad points will be displayed.

- c. Print Self-Test Page : When you first install the printer or if there are any problems with the printer, you can click [Print Self-Test Page] to confirm the firmware version, printer parameter setting status, print quality and relevant setting information of peripheral devices, etc.

d. Print test text: As shown in the figure below, you can enter the text you want to print in the text box and set the printable area in label mode. Click [Print] to perform print test.

11.4.4 PRN Print

Click [Open File], select an RRN file and click [Print] to print the file.

### 11.4.5 User setting

Switch to the user setting screen to set buzzer on/off or restore the default settings of the printer.

The function details are as follows

| Submenu                       | Description                                           | Parameter description<br>(parameter order is<br>consistent with<br>description) | Defaults |
|-------------------------------|-------------------------------------------------------|---------------------------------------------------------------------------------|----------|
| Beep                          | Change the sound of                                   | ON \ OFF \ 0ON                                                                  | 0        |
| Restore<br>factory<br>setting | Reset printer back to the<br>factory default settings |                                                                                 | None     |

### 11.4.6 Ethernet

Switch to Ethernet interface to set Ethernet parameters

1. Set the IP address of the printer, change it to "192.168.1.87", and set the communication port
2. Set the printer's subnet mask and change it to "255.255.255.0"
3. Set the printer's gateway as "192.168.1.1"
4. Set the printer's DHCP function. The printer's DHCP is disabled by default. If necessary, it can be enabled to make the printer automatically obtain the address
5. Set the Mac address and set the network transmission rate.

Note: Before setting the web address, if the printer is connected with one of following two methods: "One" uses the "Internet port", "Two" the IP address in the print driver mode. After changing the IP, the printer's IP address is changed. At this point, the printer is disconnected from the tool, and the IP address of the tool needs to be reset before connecting the printer. Other connection methods are not affected.

## 11.4.7 WIFI

Printer parameter setting instruction

1. Open the setting tool "PrinterTool".
2. According to the instruction manual of this setting tool, first make. sure that the printer is connected.
3. Open the setting tool and select "WiFi".
4. Input the SSID (WiFi name) to which the printer is connected, and the corresponding mode.
5. Enter the WiFi encryption type and the WiFi password, as shown in the figure. For example, add WiFi rdhz, with the password encryption type of WPA-PSK, enter the WiFi password, and click "Set".
6. After clicking "Set", the printer will print the set WiFi parameters. Please print a self-test page and compare the printed WiFi parameters with those of the router. If matched, please wait patiently and the printer will connect to the WiFi within 1 minute. If not matched, please reset and repeat the above steps.

The screenshot shows the 'Set Printer' window with the 'Wifi' tab selected. The 'SSID' field contains 'rdhz' and the 'Mode' dropdown is set to 'STA'. The 'WPA-PSK/WPA2-PSK' radio button is selected. Under this option, the 'Type' dropdown is set to 'WPA-PSK' and the 'Encryption' dropdown is set to 'TKIP'. The 'PSK Key' field is filled with asterisks. The 'WEP' radio button is unselected. The 'Set' button is at the bottom of the window.

Note: The factory default IP address of the printer is 192.168.1.87. If the printer's IP address and the wireless router's IP address are not on the same network segment, you need to set the printer's IP address to ensure the two addresses are on the same network segment.

### 11.4.8 Serial Port Settings

Switch to serial port setting interface to set serial port parameters. interface to set serial port parameters.

### 11.4.9 Bluetooth Settings

If the printer has Bluetooth function, you can set the Bluetooth parameters.

1. First press and hold the FEED button of the printer, and then turn on the printer to print the self-test page. From the self-test page, find out the Bluetooth pairing name and password of the printer.
2. The Bluetooth pairing name and password can be changed if necessary. At this time, the "Bluetooth Settings" function in the integrated setting tool needs to be used, as shown in the figure below.
3. Enter the new "Device Name" and "Pin" for the printer Bluetooth, and click "Set". After the printer is restarted, the settings are changed successfully.
4. Power on the main device and search for the external Bluetooth device.
5. Find the Bluetooth printer just changed and enter the corresponding password to complete the pairing. When pairing, the printer must be on.

Note: During pairing, please do not turn on multiple printers at the same time; otherwise, you may not be able to judge which printer was successfully paired.

**FCC Statement:**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the

user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

**RF exposure warning:**

This equipment complies with radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with Minimum distance 20cm between the radiator and your body.
