

Antenna Debugging Report

Customer: Duoke

Project: DK090

Structure: Xiaoxiang-13316888409

RF: Long Yaobin -15874137313

Date: October 15, 2024

Antenna Debugging Report

Report type:

Version number: V4.0

Machine status: DVT machine

Antenna frequency band:

GSM:B2/B3/B5/B8

WCDMA:W1/W2/W4/W5/W8

FDD-LTE: B1/B2/B3/B4/B5/B7/B8/B12/B13/B17/B19/B20/B26/B28B/B28A/B66

TDD-LTE: B38/B40/B41

GPS and other satellite positioning antennas

2.4G/5G WIFI

Bluetooth

PCB small board (ANT0)

0201 specification

Element	Value	PCB Tag Number
E1 (0201)	0 Ω	C202

As shown in the picture, the small board is grounded at multiple points with the zinc alloy in the middle frame through shrapnel.

As shown in the figure, conductive sponge grounding is added to the corresponding positions of the zinc alloy in the middle frame, the shielding cover of the motherboard, and the exposed copper area of the wiring.

As shown in the figure, long conductive sponges are added on both sides of the screen metal and grounded with the zinc alloy in the middle frame.

As shown in Figure 1-5: Pull the conductive cloth from below the LED light base and apply it back to the back of the LED light cable. The back of the LED light cable and the metal part on the back of the LED light should be covered with conductive sponge and conductive cloth at a height sufficient for grounding.

As shown in the figure: Extend a conductive cloth from the bracket and stick it back to the bottom of the camera. Add a large strip of conductive sponge above the bracket conductive cloth and fully ground it to the exposed copper part of the camera cable and the motherboard shielding cover.

As shown in the figure, increase the height of the horn magnet to a sufficient level for the conductive sponge to be grounded to the main board shielding cover.
