OEM GNSS Antenna HX-CSX245A(B5)

HX-CSX245A(B5) is an embedded multi-constellation, multi-frequency GNSS antenna that integrates a GNSS antenna with 4G and WiFi into one compact enclosure, meeting the current demand for multi-system compatibility in surveying equipment. The combination of high-precision GNSS positioning and 4G/WiFi function makes it ideal for applications requiring precise positioning, such as geodetic surveying and mapping, hydrographic surveying, waterway surveying, dredging surveys, seismic monitoring, bridge deformation monitoring, landslide monitoring, port container operations, and other related applications.

HIGHLY INTEGRATED ANTENNA FOR EASY INTEGRATION

HX-CSX245A(B5) integrates a GNSS antenna with 4G and WiFi antennas into a compact enclosure, simplifying integration for RTK receiver manufacturers. The isolation between different antenna systems has been extensively optimized to systematically address electromagnetic compatibility (EMC) issues that have long challenged RTK receiver design. This significantly simplifies RTK system integration while ensuring stable and reliable product performance.

STABLE PHASE CENTER FOR ROBUST POSITIONING PERFORMANCE

It features multi-point feeding capability, guaranteeing a reliable phase center for millimeter positioning accuracy. The 4G antenna array is strategically designed, with 4G antennas evenly distributed around the GNSS antenna in a symmetrical structure. This effectively mitigates the impact of communication antennas on the positioning antenna, ensuring the consistency of the positioning antenna's phase center.

TRACKING IN COMPLEX ENVIRONMENTS

The antenna delivers exceptional high-gain performance with minimal signal loss, ensuring reliable satellite signal tracking. Its wide beam width covers a broad frequency range with high marginal gain, maintaining robust signal availability even at low elevations. This makes it an ideal choice for complex environments with obstructions, such as tree canopies or buildings, enabling fast satellite locking and stable GNSS navigation signal output.

RELIABLE STRUCTURE FOR STABLE PERFORMANCE

This antenna uses air dielectric and low-loss microwave board materials. The overall weight is reduced, the structure is more robust, and the electrical performance becomes more stable and reliable.

STRONG ANTI-INTERFERENCE PERFORMANCE

The advanced LNA (Low Noise Amplifier) excels in improved signal filtering and out-of-band rejection, perfectly restraining unwanted electromagnetic interferences. With strong multi-path reduction capacity for strong

Key Features

- Supports GPS, GLONASS, Beidou, Galileo
- Supports 4G/ WiFi
- Strong anti-interference performance in complex environments
- Low profile and lightweight
- Powerful system compatibility, easy for integration

OEM GNSS Antenna HX-CSX245A(B5)

anti-interference performance, consistent and reliable GNSS signals can be achieved even under complicated environments such as power grids, communication base stations and broadcast stations.
