Blood oxygen monitoring

Before blood oxygen monitoring, first make sure that the watch is correctly worn on the wrist (the best position is at a finger width above the wrist bone). The blood oxygen detection requires that the watch be worn tightly to avoid light leakage and cannot be effectively detected. Then enter the heart rate detection. During the detection process, the wrist is required to remain stationary. When entering the blood oxygen measurement interface, the bottom green light will light up to start measuring for 30~60 seconds, and there will be a vibration reminder when the measurement is completed. The measurement is based on PPG technology.
Support to measure the current blood oxygen data
Support to view the blood oxygen history data for the last seven times

FAQ

1. Why is there a reminder on QQ, WeChat and other information, but not on the bracelet?
1.1 Confirm whether the messages can be displayed normally in the mobile notification bar. The device pushes messages by reading the messages in the mobile notification bar. If there is no message in the mobile notification bar, the device cannot receive the push. (You need to find the notification and status bar in the mobile phone settings, and turn on the phone, SMS, etc.).
1.2 Open the APP and enter the APP device bar - click the message reminder - open the corresponding application switch button to receive message push.
1.3 The Bluetooth connection between the device and the mobile phone is always maintained.

2. How can the device be unbound from the phone?
Android phone
On the "Device" page of the APP, click the "Unbind" button and select OK to unbind.
iPhone
2.1 On the "My" - "Device Information" page of APP, click the "Unbind" button;
2.2 Under "Settings" - "Bluetooth" - "My device" of the iPhone, select the bracelet to be unbound, click the blue "I" sign at the back, and then click "Ignore this device".
Note: If the iPhone does not ignore the device, it will not be able to search the device when it is bound again, and it will still receive a reminder notice when there are reminders such as information and phone calls.

3. Why are Android phones easy to disconnect?
The APP must be running in the background so that Bluetooth will not automatically disconnect, but the Android mobile phone system memory management will force the APP to close. We need to manually turn off the power saving mode of the mobile phone system or add the APP to the green background of system management so that the APP will not be forced to close

Warning:
The data is for reference, only and cannot be used as medical data. If you need more help, please contact a professional doctor.

Other functions
Bluetooth calls, common contacts, call records, voice assistant, sports records, women's health, blood pressure monitoring, breathing training, stopwatch, timer, alarm clock, message push, calendar, rest screen display and other functions.

RF warning statement:
The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

FCC Statement
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
-Reorient or relocate the receiving antenna.
-Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-Consult the dealer or an experienced radio/TV technician for help.
To assure continued compliance, any changes or modifications not expressly approved by the party.
Responsible for compliance could void the user's authority to operate this equipment. (Example- use only shielded interface cables when connecting to computer or peripheral devices).
This equipment complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) This device must accept any interference received, including interference that may cause undesired operation.
