Appendix A.9: Test Results of Radiated Spurious Emissions

Note:

- 1) This testing was carried out on different modulations, but only the worst case was presented in this report.
- 2) Testing was carried out within frequency range 9kHz to the tenth harmonics. The measurement results below 30MHz and 18GHz - 26.5GHz were greater than 20dB below the Limit, so only the radiated spurious emissions from 30MHz to 18GHz were reported.
- 3) The highest emission is the fundamental waves.
