5.Do not disassemble the product and its accessories. If the equipment or any of its components are not working properly.
6.Disposal of used device is subject to local relevant documents or policies regarding disposal of used devices.
7.It should not be worn in the shower.
(The temperature should not exceed 45℃)

Tips

Why can't wear a watch to wash a hot bath?

The temperature of the bath water is higher, so there is a lot of water vapor, and water vapor is in the gas phase， Its molecular radius is small, easy to penetrate from the watch shell gap, when the temperature drops.After it will recondense into liquid droplets, easy to cause the watch internal circuit short circuit,
Damage the watch circuit board, and then damage the watch.

Why does blood pressure value deviate from blood pressure monitor?

Deviations between watches and sphygmomanometer measurements are determined by a variety of factors, sphygmomanometer It was measured in the cerebral artery, and the watch was measured in the two main branches of the arterioles,The normal difference between aortic and arteriolar blood pressure measurements is three to fourTen; If you use a watch and a sphygmomanometer at the same time, because of the flow in the arteryIt's centrifugal blood, and the sphygmomanometer will measure it below the center of your elbowUnder pressure, the blood is temporarily unable to flow smoothly to the branches of the arteries below; The blood vesselsThe increase of tension will lead to greater deviations in the upper and lower blood pressure measurements.

Why can't the watch receive the message?

Settings for Android:

1.Ensure that the message push switch is enabled on the mobile client.
2.The message can be normally displayed in the notification bar of the mobile phone.If there is no message in the notification bar, the watch will unable to receive push. (You need to find the notification Settings in the phone Settings, open wechat,QQ, phone, SMS, mobile client notification switch).
3.Open the Accessibility Settings on the band (Find the accessibility in the phone Settings,Open the function Settings of the band)

Settings for Apple

1.Ensure that the message push switch is enabled on the mobile client.
2.The message can be normally displayed in the notification bar of the mobile phone.If there is no message in the notification bar, the watch will unable to receive push. (You need to find the notification Settings in the phone Settings, open wechat,QQ, phone, SMS, mobile client notification switch).
