FCC Information Statement

Your Helmet is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for Helmet employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the Helmet transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the Helmet while operating can be well below the maximum value. This is because the Helmet is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a Helmet model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model Helmet when tested for use worn on the body, as described in this user guide, is 0.31 W/Kg (Body-worn measurements differ among Helmet, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various Helmets and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this Helmet with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this Helmet is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID: 2A8OJ-M1. Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements. The SAR test distance is 0mm

九：常用故障排除

- 不开机:请确认设备是否有足够电量或在连接Type-C充电线的情况下按一下复位键。
- 记录仪功能无法录制或录像丢帧或者死机:
(1)请使用前先连接APP, 通过APP上面的格式化功能, 格式化TF卡后再录制。
(2)请确认是否使用的是Class 10以上的高速卡, TF卡速达不到要求, 头盔记录仪文件无法及时传输至卡内储存记录。
- APP预览画面不流畅或者下载速度慢
(与手机运行的环境相关):
(1)清空手机非必要的还在后台运行的程序, 会让手机运行更快。
(2)在环境复杂的情况下, 也会导致头盔记录仪WiFi传输功能受到影响。
- 记录显示时间不同步:只需通过APP经常连接头盔设备即可。
- 下载视频到手机相册后无法观看或卡顿:
由于安卓系统手机个别品牌自身播放器兼容性的问题, 可以升级播放器或可通过其他播放器播放, 或将存储卡通过读卡器到电脑上播放。
