

RADIO TEST REPORT

Test Report No.: 14392271H-R3

Customer	Sumitomo Electric Industries, Ltd.
Description of EUT	Pedestrian Sensor
Model Number of EUT	SWR-A001
FCC ID	2A8U2SWR-A001
Test Regulation	FCC Part 15 Subpart C
Test Result	Complied (Refer to SECTION 3)
Issue Date	November 25, 2022
Remarks	-

Representative test engineer

Yuichiro Yamazaki
Engineer

Approved by

Ryota Yamanaka
Engineer

CERTIFICATE 5107.02

- ☐ The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan, Inc.
☒ There is no testing item of "Non-accreditation".

Report Cover Page - Form-ULID-003532 (DCS:13-EM-F0429) Issue# 21.0

ANNOUNCEMENT

- This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- The results in this report apply only to the sample tested. (Laboratory was not involved in sampling.)
- This sample tested is in compliance with the limits of the above regulation.
- The test results in this test report are traceable to the national or international standards.
- This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- This test report covers Radio technical requirements.
It does not cover administrative issues such as Manual or non-Radio test related Requirements. (if applicable)
- The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan, Inc. has been accredited.
- The information provided from the customer for this report is identified in Section 1.
- For test report(s) referred in this report, the latest version (including any revisions) is always referred.

REVISION HISTORY

Original Test Report No.: 14392271H

This report is a revised version of 14392271H-R2. 14392271H-R2 is replaced with this report.

(1/2)

Revision	Test Report No.	Date	Page Revised Contents
- (Original)	14392271H	October 24, 2022	-
1	14392271H-R1	November 17, 2022	Correction of the Test Date in SECTION 2.1 due to the retest. From September 15 to October 4, 2022 To September 15 to November 9, 2022
1	14392271H-R1	November 17, 2022	Correction of the Antenna Gain in Radio Specification of SECTION 2.2 as follows; From 8 dBi to 8.01 dBi at 61.02 GHz 8.11 dBi at 61.13 GHz 8.21 dBi at 61.25 GHz 8.24 dBi at 61.36 GHz 8.24 dBi at 61.48 GHz
1	14392271H-R1	November 17, 2022	Correction of the worst margin for Spurious Emissions in Clause 3.2; From 6.0 dB, 14399.5 MHz, AV, Horizontal / Vertical To 3.82 dB, 122.955 MHz, AV
1	14392271H-R1	November 17, 2022	Deletion of Transmitter Identification and note *3) from the table in Clause 3.2
1	14392271H-R1	November 17, 2022	Correction of the antenna size of EUT for About fundamental measurement (Peak) in SECTION 6 From 0.00680 to 0.01090
1	14392271H-R1	November 17, 2022	Replacement of the data and value of Transmission Pattern 1 for 20 dB Bandwidth and 99 % Occupied bandwidth test; - Measured -20 dBc Frequency Lower Result: from 61.01156 to 61.00814 Upper Result: from 61.25069 to 61.25509 - 20 dB bandwidth From 239.13 to 246.95

(2/2)

Revision	Test Report No.	Date	Page Revised Contents
1	14392271H-R1	November 17, 2022	Replacement the test data for EIRP, Peak Output Power test. (retest by EIRP measurement method (VBW = 50 MHz))
1	14392271H-R1	November 17, 2022	Correction of EIIRP, Peak Output Power test data as follows; -EUT Ante. Gain Transmission Pattern 1, Test Antenna Tx1, 61.02 GHz From 8.00 to 8.01 Transmission Pattern 1, Test Antenna Tx1, 61.13 GHz From 8.00 to 8.11 Transmission Pattern 1, Test Antenna Tx1, 61.25 GHz From 8.00 to 8.21 Transmission Pattern 1, Test Antenna Tx3, 61.02 GHz From 8.00 to 8.01 Transmission Pattern 1, Test Antenna Tx3, 61.13 GHz From 8.00 to 8.11 Transmission Pattern 1, Test Antenna Tx3, 61.25 GHz From 8.00 to 8.21 Transmission Pattern 2, Test Antenna Tx1, 61.25 GHz From 8.00 to 8.21 Transmission Pattern 2, Test Antenna Tx1, 61.36 GHz From 8.00 to 8.24 Transmission Pattern 2, Test Antenna Tx1, 61.48 GHz From 8.00 to 8.24 Transmission Pattern 2, Test Antenna Tx3, 61.25 GHz From 8.00 to 8.21 Transmission Pattern 2, Test Antenna Tx3, 61.36 GHz From 8.00 to 8.24 Transmission Pattern 2, Test Antenna Tx3, 61.48 GHz From 8.00 to 8.24
1	14392271H-R1	November 17, 2022	- Addition of the following sentence under EIIRP, Peak Output Power test date *1) Refer to the application document. - Due to the above addition, the original *1) was changed to *2).
1	14392271H-R1	November 17, 2022	Correction of the Tx 1 Chirp ON time value for Duty Cycle test. From 47.029 to 47.027
1	14392271H-R1	November 17, 2022	Deletion of the description for Transmitter Identification from page 43.
1	14392271H-R1	November 17, 2022	Addition of the following item to the test equipment list in APPENDIX 2; RE: LA-17, MAT-34, MBA-05, MCC-50, MPA-14, MTR-10
2	14392271H-R2	November 22, 2022	Correction of the Test Date in SECTION 2.1 due to the retest. From September 15 to November 9, 2022 To September 15 to November 22, 2022
2	14392271H-R2	November 22, 2022	Correction of the Spurious Emissions worst margin frequency unit in Clause 3.2; from "MHz" to "GHz"
2	14392271H-R2	November 22, 2022	Deletion of "EIRP(Average only)" from Test Item of Normal operating mode in Clause 4.1
2	14392271H-R2	November 22, 2022	Correction of [About fundamental measurement (Peak)] in SECTION 6
2	14392271H-R2	November 22, 2022	Replacement the data of EIRP, Peak Output Power test due to the retest
2	14392271H-R2	November 22, 2022	Replacement of the setup photo of EIRP / Peak Output Power test due to the retest in APPENDIX 3
2	14392271H-R2	November 22, 2022	Addition of "*1)" to calibration date for RE: MDO-10, MMX-02 and MPA-31 in APPENDIX 2
3	14392271H-R3	November 25, 2022	Update the Last Calibration Date for MDO-10, MMX-02, MPA-31 and MCC-50 in APPENDIX 2

SECTION 1: Customer Information

Company Name	Sumitomo Electric Industries, Ltd.
Address	1-1-3, Shimaya, Konohana-ku, Osaka 554-0024, Japan
Telephone Number	+81-6-6466-5643
Contact Person	Hideaki Shiranaga

The information provided from the customer is as follows;

- Customer, Description of EUT, Model Number of EUT, FCC ID on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer Information
- SECTION 2: Equipment Under Test (EUT) other than the Receipt Date and Test Date
- SECTION 4: Operation of EUT during testing
- * The laboratory is exempted from liability of any test results affected from the above information in SECTION 2 and 4.

SECTION 2: Equipment Under Test (EUT)

2.1 Identification of EUT

Description	Pedestrian Sensor
Model Number	SWR-A001
Serial Number	Refer to SECTION 4.2
Condition	Engineering prototype (Not for Sale: This sample is equivalent to mass-produced items.)
Modification	No Modification by the test lab
Receipt Date	September 14, 2022
Test Date	September 15 to November 22, 2022

2.2 Product Description

General Specification

Rating	DC 12 V
Operating temperature	-40 deg. C to 75 deg. C

Radio Specification

Equipment Type	Transceiver
Frequency of Operation range	61.0 GHz to 61.5 GHz
Bandwidth	250 MHz
Type of Modulation	Frequency modulation (FMCW)
Antenna Gain	8.01 dBi at 61.02 GHz 8.11 dBi at 61.13 GHz 8.21 dBi at 61.25 GHz 8.24 dBi at 61.36 GHz 8.24 dBi at 61.48 GHz
Steerable Antenna	electronically
Usage location	Fixed Field disturbance sensor

SECTION 3: Test specification, procedures & results

3.1 Test Specification

Test Specification	FCC Part 15 Subpart C The latest version on the first day of the testing period
Title	FCC 47CFR Part15 Radio Frequency Device Subpart C Intentional Radiators Section 15.207 Conducted limits. Section 15.255 Operation within the band 57-71 GHz.

3.2 Procedures and results

Item	Test Procedure	Specification	Worst margin	Results	Remarks
Conducted Emission	FCC: ANSI C63.10-2013, 6. Standard test methods	FCC: Section 15.207	9.44 dB, 10.79330 MHz, AV Phase L <Transmission Pattern 1 (Normal operating mode)>	Complied a)	-
6dB Bandwidth	FCC: Section 15.255(e) (1) ANSI C63.10 2013, 9. Procedures for testing millimeter-wave systems	FCC: Section 15.255(e) (1)	See data.	Complied b)	Radiated *1)
20dB Bandwidth	FCC: ANSI C63.10 2013, 6. Standard test methods	FCC: Section 15.215 (c)		Complied b)	Radiated
EIRP Duty cycle	FCC: ANSI C63.10 2013, 9. Procedures for testing millimeter-wave systems	FCC: Section 15.255(c)		Complied c)	Radiated
Peak Output Power	FCC: Section 15.255(e) ANSI C63.10 2013, 9. Procedures for testing millimeter-wave systems	FCC: Section 15.255(e)		Complied c)	Radiated
Spurious Emissions	FCC: ANSI C63.10 2013, 6. Standard test methods 9. Procedures for testing millimeter-wave systems	FCC: Section 15.255(d) Section 15.209	3.82 dB 122.955 GHz, AV < Transmission Pattern 2 (Normal operating mode / Tx Test mode (Frequency sweep stop)) >	Complied d)	Radiated
Frequency Stability	FCC: ANSI C63.10 2013, 9. Procedures for testing millimeter-wave systems	FCC: Section 15.255(f)	See data.	Complied e)	Radiated
Group Installation	FCC: -	FCC: Section 15.255(h)	See data.	N/A	*2)

Note: UL Japan, Inc.'s EMI Work Procedures: Work Instructions-ULID-003591 and Work Instructions-ULID-003593.

*1) Reference data.

*2) The test is not applicable since there are no external phase-locking inputs in this EUT.

a) Refer to APPENDIX 1 (data of Conducted Emission)

b) Refer to APPENDIX 1 (data of 6 dB Bandwidth / 20 dB Bandwidth and 99 % Occupied bandwidth)

c) Refer to APPENDIX 1 (data of Peak EIRP / Peak Output Power / Duty)

d) Refer to APPENDIX 1 (data of Spurious Emission)

e) Refer to APPENDIX 1 (data of Frequency Stability)

FCC Part 15.31 (e)

This EUT provides the stable voltage constantly to RF Module regardless of input voltage.
Therefore, this EUT complies with the requirement.

FCC Part 15.203 Antenna requirement

The antenna is not removable from the EUT.

Therefore, the equipment complies with the antenna requirement of Section 15.203.

3.3 Addition to standard

Item	Test Procedure	Specification	Worst margin	Results	Remarks
99 % Occupied Bandwidth	ISED: RSS-Gen 6.6	ISED: -	N/A	Complied	Radiated

Other than above, no addition, exclusion nor deviation has been made from the standard.

3.4 Uncertainty

Measurement uncertainty is not taken into account when stating conformity with a specified requirement.

Note: When margins obtained from test results are less than the measurement uncertainty, the test results may exceed the limit.

The following uncertainties have been calculated to provide a confidence level of 95 % using a coverage factor k=2.

Conducted emission

Using Item	Frequency range	Uncertainty (+/-)
AMN (LISN)	0.009 MHz to 0.15 MHz	3.7 dB
	0.15 MHz to 30 MHz	3.3 dB

Radiated emission

Measurement distance	Frequency range		Uncertainty (+/-)
3 m	9 kHz to 30 MHz		3.2 dB
10 m			3.0 dB
3 m	30 MHz to 200 MHz	Horizontal	4.8 dB
		Vertical	5.0 dB
	200 MHz to 1000 MHz	Horizontal	5.1 dB
		Vertical	6.2 dB
10 m	30 MHz to 200 MHz	Horizontal	4.8 dB
		Vertical	4.8 dB
	200 MHz to 1000 MHz	Horizontal	5.0 dB
		Vertical	5.0 dB
3 m	1 GHz to 6 GHz		4.9 dB
	6 GHz to 18 GHz		5.2 dB
1 m	10 GHz to 26.5 GHz		5.4 dB
	26.5 GHz to 40 GHz		5.4 dB
0.5 m	26.5 GHz to 40 GHz		5.4 dB
10 m	1 GHz to 18 GHz		5.4 dB
>= 0.5 m	40 GHz to 50 GHz		4.1 dB
>= 0.5 m	50 GHz to 75 GHz		5.1 dB
>= 0.5 m	75 GHz to 110 GHz		5.4 dB
>= 3.8 cm	110 GHz to 170 GHz		5.2 dB
>= 2.5 cm	170 GHz to 260 GHz		5.0 dB

3.5 Test Location

UL Japan, Inc. Ise EMC Lab.

*A2LA Certificate Number: 5107.02 / FCC Test Firm Registration Number: 884919

ISED Lab Company Number: 2973C / CAB identifier: JP0002

4383-326 Asama-cho, Ise-shi, Mie-ken 516-0021 Japan

No.10 shielded room	3.8 x 2.8 x 2.8	3.8 x 2.8	-	-
No.11 measurement room	4.0 x 3.4 x 2.5	N/A	-	-
No.12 measurement room	2.6 x 3.4 x 2.5	N/A	-	-
Large Chamber	16.9 x 22.1 x 10.17	16.9 x 22.1	-	10 m
Small Chamber	5.3 x 6.69 x 3.59	5.3 x 6.69	-	-

* Size of vertical conducting plane (for Conducted Emission test): 2.0 x 3.0 m for No.1, No.2, No.3, No. 4 and No.5 semi-anechoic chambers and No.3 and No.4 shielded rooms.

3.6 Test data, RF Exposure, Test instruments, and Test set up

Refer to APPENDIX.

SECTION 4: Operation of EUT during testing

4.1 Operating Mode(s)

Mode	Transmission Pattern	Antenna	Frequency	Test Item
Normal operating mode	1	Tx1/Tx3	61.128 GHz	Conducted emission, Duty cycle, 6 dB Bandwidth, 20 dB Bandwidth, 99 % Occupied bandwidth, Peak Output Power, Frequency stability, Spurious Emissions *2)
	2	Tx1/Tx3	61.360 GHz	
Tx Test mode (Frequency sweep stop) *1)	1	Tx1	Low 61.018 GHz	EIRP, Peak Output Power, Spurious Emissions *2)
		Tx3	Mid 61.128 GHz High 61.248 GHz	
	2	Tx1	Low 61.250 GHz	
		Tx3	Mid 61.360 GHz High 61.480 GHz	
*Power of the EUT was set by the software as follows; Power Setting: 10dBm Software: mmwave_Studio_cli_xwr68xx.bin Version: 1.0.0 (Date: 2021.03 13, Storage location: EUT memory)				
*This setting of software is the worst case. Any conditions under the normal use do not exceed the condition of setting. In addition, end users cannot change the settings of the output power of the product.				

*1) As requirement of 15.31 (c), EIRP/Peak Output Power stopped the frequency sweep and the test was performed.

*2) Spurious Emissions was tested in Normal operating mode.
 The frequency sweep was stopped when signal was detected.
 When the level is varied, the frequency sweep was stopped and the test was performed.
 When the level is not varied, the test was performed in normal operating mode.

4.2 Configuration and peripherals

Conducted Emission and Frequency Stability tests

* Cabling and setup(s) were taken into consideration and test data was taken under worse case conditions.

SECTION 5: Conducted Emission

Test Procedure and Conditions

EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane.

The rear of tabletop was located 40 cm to the vertical conducting plane. The rear of EUT, including peripherals aligned and flushed with rear of tabletop. All other surfaces of tabletop were at least 80 cm from any other grounded conducting surface. EUT was located 80 cm from a Line Impedance Stabilization Network (LISN) / Artificial mains Network (AMN) and excess AC cable was bundled in center.

For the tests on EUT with other peripherals (as a whole system)

I/O cables that were connected to the peripherals were bundled in center. They were folded back and forth forming a bundle 30 cm to 40 cm long and were hanged at a 40 cm height to the ground plane. All unused 50 ohm connectors of the LISN (AMN) were resistivity terminated in 50 ohm when not connected to the measuring equipment.

The AC Mains Terminal Continuous disturbance Voltage has been measured with the EUT in a Semi Anechoic Chamber.

The EUT was connected to a LISN (AMN).

An overview sweep with peak detection has been performed.

The test results and limit are rounded off to one decimal place, so some differences might be observed.

Detector	: QP and CISPR AV
Measurement Range	: 0.15 MHz to 30 MHz
Test Data	: APPENDIX
Test Result	: Pass

Figure 1: Test Setup

SECTION 6: Radiated Emissions

Test Procedure

[For below 30 MHz]

The EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane.

The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with absorbent materials lined on a ground plane.

The loop antenna was fixed height at 1.0 m.

The EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for vertical polarization (antenna angle: 0 deg., 45 deg., 90 deg., 135 deg., and 180 deg.) and horizontal polarization.

*Refer to Figure 1 about Direction of the Loop Antenna.

[For above 30 MHz, up to 1 GHz]

The EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane. The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with a ground plane.

The height of the measuring antenna varied between 1 m and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field strength.

[For above 1 GHz, up to 40 GHz]

The EUT was placed on a urethane platform of nominal size, 0.5 m by 0.5 m, raised 1.5 m above the conducting ground plane.

The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with absorbent materials lined on a ground plane.

The height of the measuring antenna varied between 1 m and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field strength.

Test antenna was aimed at the EUT for receiving the maximum signal and always kept within the illumination area of the 3 dB beamwidth of the antenna.

The measurements were performed for both vertical and horizontal antenna polarization with the Test Receiver, or the Spectrum Analyzer.

The measurements were made with the following detector function of the test receiver and the Spectrum analyzer.

The test was made with the detector (RBW/VBW) in the following table.

Test Antennas are used as below;

Frequency	Below 30 MHz	30 MHz to 200 MHz	200 MHz to 1 GHz	Above 1 GHz
Antenna Type	Loop	Biconical	Logperiodic	Horn

Frequency	From 9 kHz to 90 kHz and From 110 kHz to 150 kHz	From 90 kHz to 110 kHz	From 150 kHz to 490 kHz	From 490 kHz to 30 MHz	From 30 MHz to 1 GHz	From 1 GHz to 40 GHz	
Instrument used	Test Receiver					Spectrum Analyzer	
Detector	PK / AV	QP	PK / AV	QP	QP	PK	AV
IF Bandwidth	200 Hz	200 Hz	9 kHz	9 kHz	120 kHz	RBW: 1 MHz VBW: 3 MHz	RBW: 1 MHz VBW: 10 Hz
Test Distance	3 m	3 m	3 m	3 m	3 m	4 m (below 10 GHz), 1 m (above 10 GHz)	

[Test setup]
Below 1 GHz

x : Center of turn table

Test Distance: 3 m

1 GHz to 10 GHz

r : Radius of an outer periphery of EUT

x : Center of turn table

Distance Factor: $20 \times \log (4.0 \text{ m}^* / 3.0 \text{ m}) = 2.5 \text{ dB}$

* Test Distance: $(3 + \text{Test Volume} / 2) - r = 4.0 \text{ m}$

Test Volume: 2 m

(Test Volume has been calibrated based on CISPR 16-1-4.)

r = 0.0 m

10 GHz to 40 GHz

[Above 40 GHz]

The test was performed based on “Procedures for testing millimeter-wave systems” of ANSI C63.10-2013. The EUT was placed on a urethane platform, raised 1.5 m above the conducting ground plane. The measurements were performed on handheld method.

Set spectrum analyzer RBW, VBW, span, etc., to the proper values. Note these values. Enable two traces—one set to “clear write,” and the other set to “max hold.” Begin hand-held measurements with the test antenna (horn) at a distance of 1 m from the EUT in a horizontally polarized position. Slowly adjust its position, entirely covering the plane 1 m from the EUT. Observation of the two active traces on the spectrum analyzer will allow refined horn positioning at the point(s) of maximum field intensity. Repeat with the horn in a vertically polarized position. If the emission cannot be detected at 1 m, reduce the RBW to increase system sensitivity. Note the value. If the emission still cannot be detected, move the horn closer to the EUT, noting the distance at which a measurement is made.

Note the maximum level indicated on the spectrum analyzer. Adjust this level, if necessary, by the antenna gain, filter loss, conversion loss of the external mixer and gain of LNA used, at the frequency under investigation. Calculate the field strength of the emission at the measurement distance from the Friis’ transmission equation.

Frequency	40 GHz to 50 GHz	50 GHz to 75 GHz	75 GHz to 110 GHz	110 GHz to 200 GHz (except for 122 GHz to 123 GHz)	122 GHz to 123 GHz
Final measurement distance with 1 MHz Peak detector	1.0 m	0.75 m	0.5 m	0.01 m	0.22 m

[Test setup]

40 GHz to 200 GHz

× : Center of turn table

*Test Distance: Refer to the above table.

[About fundamental measurement (Peak)]

Test Procedure

The test was performed based on “Procedures for testing millimeter-wave systems” of ANSI C63.10-2013.
The peak power were measured with an RF detector that has a detection bandwidth that encompasses the 57-71 GHz band and has a video bandwidth of at least 10 MHz.

The carrier levels were measured in the far field. The distance of the far field was calculated from follow equation.

$$r = \frac{2D^2}{\lambda}$$

where

r is the distance from the radiating element of the EUT to the edge of the far field, in m
 D is the largest dimension of both the radiating element and the test antenna (horn), in m
 λ is the wavelength of the emission under investigation [$300/f$ (MHz)], in m

Frequency	Wavelength	Maximum Dimention			Far Field Boundary	Tested Distance
		EUT	Test Antenna	Maximum D		
[GHz]	λ [mm]	[m]	[m]	[m]	[m]	[m]
75	4.0	0.01090	0.03759	0.03759	0.707	0.75

The test was performed based on stages 1-4 following;

Stage 1:

Connect the measurement antenna for the fundamental frequency band to the mm-wave RF detector. Place the measurement antenna at a test distance that is in the far-field of the measurement antenna.
Place the measurement antenna in the main beam of the EUT then maximize the fundamental emission.
The maximum direction was searched under carefully since beam-widths are extremely narrow.
Record the peak voltage from DSO as DSO Reading.

Stage 2:

Disconnect the measurement antenna from the RF input port of the instrumentation system.
Connect the mm-wave source to the RF input port of the instrumentation system.
The mm-wave source shall be unmodulated.
Adjust the frequency of the mm-wave source to the center of the frequency range occupied by the transmitter.
Adjust the amplitude of the mm-wave source such that the DSO indicates a voltage equal to the peak voltage recorded in Stage 1.
The output level of mm-wave source at this time is recorded as SG Reading.

Stage 3:

Disconnect the mm-wave source from the RF input port of the instrumentation system.
Without changing any settings, connect the mm-wave source to a wideband mm-wave power meter with a thermocouple detector or equivalent. Measure the power and record it as PM reading.

Stage 4:

Correct the peak substitution power at the input to the measurement instrument, as recorded in Stage 3, for any external gain and/or attenuation between the measurement antenna and the measurement instrument that was not included in the substitution power measurement.

The test results and limit are rounded off to one decimal place, so some differences might be observed.

SECTION 7: Frequency Stability

Test Procedure

The block downconverter was placed in side of the temperature chamber's drain hole.

The power supply was set to nominal operating voltage (100 %), and the spectrum mask was measured at 20 deg. C. After that, EUT power supply was varied between 85 % and 115 % of nominal voltage and the frequency excursion of the EUT emission mask was recorded.

The EUT operating temperature was raised to 50 deg. C., and the frequency excursion of the EUT emission mask was recorded. Measurements were repeated at each 10 deg. C. decrement down to -20 deg. C.

In addition, additional tests were performed with some temperatures according to the customer's request.

Both lower and upper frequencies of the -20 dB Bandwidth were recorded.

Result = Reading + Ant Factor + Loss (Cable+Attenuator+Filter+Distance factor(above 1 GHz)) - Gain(Amplifier)

*Other frequency noises omitted in this report were not seen or had enough margin (more than 20 dB).

*QP detector was used up to 1GHz.

Distance factor:	1 GHz - 10 GHz	20log (4.0 m / 3.0 m) = 2.5 dB
	10 GHz - 40 GHz	20log (1.0 m / 3.0 m) = -9.5 dB

* The peak result is less than the average limit. The peak emission result fall below the average limit except for 14399.5 MHz.

Calculation: FSL (Free Space path Loss) = $10 * \log ((4 * \pi * D / \lambda)^2)$
EIRP = Reading - Rx Ant. Gain + Filter Loss - LNA Gain + Mixer Conv. Loss - IF Amp. Gain + IF Cable Loss + FSL
Power density Result at 3 m = EIRP / (4 * π * 300²)

These calculation results are same as results which were calculated with formulas described in the Section 9 of ANSI C63.10-2013.
The equipment were not used for factor 0 dB of the data sheets.

NS: No signal detected.

*1) Normal Operating mode and Tx Test mode (Frequency sweep stop) was compared, the value of Normal Operating mode of high level was applied.

*2) Among the second harmonics: Tx Test mode (Frequency sweep stop), the value of Tx 1 Mid of high level was applied.

* The peak result is less than the average limit.

Calculation: FSL (Free Space path Loss) = $10 * \log((4 * \pi * D / \lambda)^2)$
EIRP = Reading - Rx Ant. Gain + Filter Loss - LNA Gain + Mixer Conv. Loss - IF Amp. Gain + IF Cable Loss + FSL
Power density Result at 3 m = EIRP / (4 * π * 300²)These calculation results are same as results which were calculated with formulas described in the Section 9 of ANSI C63.10-2013.
The equipment were not used for factor 0 dB of the data sheets.

NS: No signal detected.

*1) Normal Operating mode and Test mode CW was compared, the value of Normal Operating mode of more power was applied.

*2) Among the second harmonics: Test mode CW, the value of Tx 3 High of more power was applied.

* The peak result is less than the average limit.

Spurious Emission
(Above 40 GHz)
(Plot data, Worst case)

*Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

The expiration*1) This test equipment was used for the tests before the expiration date of the calibration.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.
