

Operational Mode: SRD						
Channel (MHz)	Maximum Peak Conducted Output Power (dBm)	Tune up tolerance (dB)	Maximum tune-up Power (dBm)	Maximum tune-up Power (mW)	Calculated value	Exclusion threshold
2450	-11.46	-11±1	-10	0.100	0.031	3

Calculated value $0.10 < 3.0$, So there is no require SAR test
 $\text{dbm} = \text{dbuv}/m - 95.2$, so the 2.4G-2450MHz power is $83.74 - 95.2 = -11.46\text{dBm}$
