

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On a wooden workbench, there is a spectrum analyzer with a green probe connected to it. A power supply unit is on the floor, connected to the workbench. A tablet with a color calibration chart is on the right side of the workbench.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A white test chamber is placed on a metal floor. A metal frame is positioned in front of the chamber. The walls of the chamber are lined with white and blue electromagnetic interference (EMI) shielding material.

Radiation Emission Test Setup (30MHz to1GHz)	 A photograph of a radiation emission test setup in an anechoic chamber. A white, U-shaped test fixture is positioned on a black circular turntable. The chamber walls are covered with white, square-shaped absorbers. A green and white striped safety line is visible on the floor. A metal railing is on the right side.
Radiation Emission Test Setup (1GHz to18GHz)	 A photograph of a radiation emission test setup in an anechoic chamber. A white, U-shaped test fixture is positioned on a black circular turntable. A small, colorful, rectangular object is placed on top of the fixture. A red, curved object is visible in the foreground. The chamber walls are covered with white, square-shaped absorbers. A yellow line is visible on the floor.

**Radiation Emission
Test Setup (Above18GHz)**
