

## RF Exposure Evaluation

### 1 Measuring Standard

KDB 680106 D01 RF Exposure Wireless Charging Apps v03

### 2 Requirements

According to the item 5 of KDB 680106 D01v03:

Inductive wireless power transfer applications that meet all of the following requirements are excluded from submitting an RF exposure evaluation.

- (1) Power transfer frequency is less than 1MHz.
- (2) Output power from each primary coil is less than or equal to 15 watts.
- (3) The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.
- (4) Client device is placed directly in contact with the transmitter.
- (5) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).
- (6) The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit.

### Limits

The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

Limits for Maximum Permissible Exposure (MPE)

| Frequency range (MHz)                                          | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density (mW/cm <sup>2</sup> ) | Averaging time (minutes) |
|----------------------------------------------------------------|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| <b>(A) Limits for Occupational/Controlled Exposures</b>        |                               |                               |                                     |                          |
| 0.3-3.0                                                        | 614                           | 1.63                          | *(100)                              | 6                        |
| 3.0-30                                                         | 1842/f                        | 4.89/f                        | *(900/f <sup>2</sup> )              | 6                        |
| 30-300                                                         | 61.4                          | 0.163                         | 1.0                                 | 6                        |
| 300-1500                                                       | /                             | /                             | f/300                               | 6                        |
| 1500-100,000                                                   | /                             | /                             | 5                                   | 6                        |
| <b>(B) Limits for General Population/Uncontrolled Exposure</b> |                               |                               |                                     |                          |
| 0.3-1.34                                                       | 614                           | 1.63                          | *(100)                              | 30                       |
| 1.34-30                                                        | 824/f                         | 2.19/f                        | *(180/f <sup>2</sup> )              | 30                       |
| 30-300                                                         | 27.5                          | 0.073                         | 0.2                                 | 30                       |
| 300-1500                                                       | /                             | /                             | f/1500                              | 30                       |
| 1500-100,000                                                   | /                             | /                             | 1.0                                 | 30                       |

F=frequency in MHz  
 \*=Plane-wave equivalent power density  
 RF exposure compliance will need to be determined with respect to 1.1307(c) and (d) of the FCC rules. The emissions should be within the limits at 300kHz in Table 1 of 1.1310(use the 300kHz limits for 150kHz:614V/m,1.63A/m).

### 3 Test Setup

#### 4 Test Procedure

- 1) The RF exposure test was performed in anechoic chamber.
- 2) The measurement probe was placed at test distance (15 cm from all sides and 20 cm from the top) which is between the edge of the charger and the geometric center of probe.
- 3) The highest emission level was recorded and compared with limit as soon as measurement of each points (A, B, C, D, E) were completed.
- 4) The EUT was measured according to the dictates of KDB 680106 D01v03.

Remark: The EUT's test position A, B, C, D and E is valid for the E and H field measurements.

#### 5 Equipment Approval Considerations

The EUT does comply with KDB 680106 D01 as follow table.

| Requirements of KDB 680106 D01                                                                                                                                                                                                                                                                       | Yes / No | Description                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Power transfer frequency is less than 1 MHz                                                                                                                                                                                                                                                          | Yes      | The device operate in the frequency range 115KHz~333KHz                                                                                                                                   |
| Output power from each primary coil is less than 15 watts                                                                                                                                                                                                                                            | Yes      | The maximum output power for each primary coil is 10W.                                                                                                                                    |
| The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.                                                                                                             | Yes      | The transfer system includes only one primary coils.                                                                                                                                      |
| Client device is placed directly in contact with the transmitter.                                                                                                                                                                                                                                    | Yes      | Client device is placed directly in contact with the transmitter.                                                                                                                         |
| Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).                                                                                                                                                                                                    | Yes      | Mobile exposure conditions only                                                                                                                                                           |
| The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit. | Yes      | The EUT H-field strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit. |

## 6 Description of the test mode

Equipment under test was operated during the measurement under the following conditions:

☒ Charging and communication mode

| Test Modes: |                                                                     |            |
|-------------|---------------------------------------------------------------------|------------|
| Mode 1      | AC/DC Adapter (5V/2.4A) + EUT + Battery Load (Battery Status: <1%)  | Record     |
| Mode 2      | AC/DC Adapter (5V/2.4A) + EUT + Battery Load (Battery Status: <50%) | Pre-tested |
| Mode 3      | AC/DC Adapter (5V/2.4A) + EUT + Battery Load (Battery Status: 100%) | Pre-tested |

Note: All test modes were pre-tested, but we only recorded the worst case in this report.

## 7 Description of Support Units

Follow auxiliary equipment(s) test with EUT that provided by the manufacturer or laboratory is listed as follow:

| Description | Manufacturer | Model  | Technical Parameters                                                      | Certificate | Provided by |
|-------------|--------------|--------|---------------------------------------------------------------------------|-------------|-------------|
| Adapter     | /            | GS-555 | Input: 100-240V~, 50/60Hz, 0.6A<br>Output:DC 5V 2.4A/9V 1.67A/12V 1.5A/2A | CE/FCC      | laboratory  |
| Apple Watch | Apple        | S8     | 5A, 2.0A                                                                  | CE/FCC      | laboratory  |

## 8 Test Instruments list

| Test Equipment                             | Manufacturer | Model No.                    | SN.    | Cal.Date (mm-dd-yy) | Cal.Due date (mm-dd-yy) |

## 10 Conclusion

A minimum safety distance of 20 cm to the antenna is required when the device is charging a Smart phone for mobile exposure. The detected emissions are below the limitations according KDB 680106 D01v03 and No need to submit KDB inquiry.
