## Technical specifications

|       |            |
|-------|------------|
| model | YX-R1-V100 |
|-------|------------|

|                       |                                                                                    |
|-----------------------|------------------------------------------------------------------------------------|
| Describe              | Green power indicator light, green flashing signal indicates successful connection |
| Operating voltage     | 5.0V DC                                                                            |
| GAIN                  | 0dBI                                                                               |
| Mean power            | ≤1.0W                                                                              |
| Operating temperature | -40℃ ~ 80℃                                                                         |
| Size                  | 60×70mm                                                                            |
| Socket specification  | 2.54mm-4P                                                                          |

## Dimension illustration

### Front view of the physical object dimensions

## Back view dimensions diagram of the physical object

## Interface diagram

| Interface specification |   |     |
|-------------------------|---|-----|
| J26                     | 1 | RX  |
|                         | 2 | TX  |
|                         | 3 | GND |
|                         | 4 | 5V  |
