ATTN.: Reviewing Engineer

FCC ID: 2A9Q4-CHIRP01T

The Chirp Sensor device, with the 60-64GHz mmWave radar sensor, complies with the fixed operation requirement of Section FCC 15.255(a)(2) and RSS-210 J.1 because the Chirp Sensor itself is mounted at a fixed location in the room to be monitored by the Chirp Sensor.

The Chirp Sensor device is mounted, using the provided screws or double-sided mounting tape, to a wall within the room to be monitored. The device is to be mounted at a height of ~120cm from the floor, within 1.5m of a wall power outlet, and with the area to be monitored within its 120° field of view. The correct fixed mounting of the Chirp Sensor is required for monitoring individuals in the room. Incorrect mounting or any movement of the sensor device will result in loss of detection and tracking of individuals in the room.
