## TEST RESULT CERTIFICATION

Applicant's Name.....: Kunwei Medical Electronics Co., Ltd  
 Address.....: Room 1402,Block B,Building 2,Longgang Tianan Cyber Park,  
 Huangge Road,Longgang District Shenzhen Guangdong,  
 CN518172  
 Manufacture's Name.....: Kunwei Medical Electronics Co., Ltd  
 Address.....: Room 1402,Block B,Building 2,Longgang Tianan Cyber Park,  
 Huangge Road,Longgang District Shenzhen Guangdong,  
 CN518172

### Product Description

Product Name.....: Behind-The-Ear Hearing Aid  
 Brand Name.....: N/A  
 Model Name.....: KD-17B  
 Series Model.....: KD-X78,KG-7XB,KV-70X  
 Test Standards.....: FCC Rules and Regulations Part 15 Subpart C, Section 247  
 Test Procedure.....: ANSI C63.10:2013

This device described above has been tested by Flux Compliance Service Laboratory, the test results show that the equipment under test (EUT) is in compliance with the FCC requirements. And it is applicable only to the tested sample identified in the report.

This report shall not be reproduced except in full, without the written approval of Flux Compliance Service Laboratory, this document may be altered or revised by Flux Compliance Service Laboratory, personal only, and shall be noted in the revision of the document..

### Date of Test.....:

Date (s) of performance of tests.: Nov 29, 2022~Dec 21, 2022

Date of Issue.....: Dec 21, 2022

Test Result.....: Pass

Tested by : Scott Shen

## 1.2 MEASUREMENT UNCERTAINTY

The reported uncertainty of measurement  $y \pm U$ , where expended uncertainty  $U$  is based on a standard uncertainty multiplied by a coverage factor of  $k=2$ , providing a level of confidence of approximately **95 %**.

| No. | Item                                      | Uncertainty           |
|-----|-------------------------------------------|-----------------------|
| 1   | RF output power, conducted                | $\pm 0.71\text{dB}$   |
| 2   | Unwanted Emissions, conducted             | $\pm 2.988\text{ dB}$ |
| 3   | Conducted Emission (9KHz-150KHz)          | $\pm 4.13\text{ dB}$  |
| 4   | All emissions radiated (9KHz -30MHz)      | $\pm 3.1\text{ dB}$   |
| 5   | Conducted Emission (150KHz-30MHz)         | $\pm 4.74\text{ dB}$  |
| 6   | All emissions,radiated(<1G) 30MHz-1000MHz | $\pm 5.2\text{ dB}$   |
| 7   | All emissions,radiated 1GHz -18GHz        | $\pm 4.66\text{ dB}$  |
| 8   | All emissions,radiated 18GHz -40GHz       | $\pm 4.31\text{ dB}$  |

## 2. GENERAL INFORMATION

### 2.1 GENERAL DESCRIPTION OF THE EUT

|                         |                                                                                                                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Name            | Behind-The-Ear Hearing Aid                                                                                                                                                                   |
| Trade Name              | N/A                                                                                                                                                                                          |
| Model Name              | KD-17B                                                                                                                                                                                       |
| Series Model            | KD-X78,KG-7XB,KV-70X                                                                                                                                                                         |
| Model Difference        | The above product with same circuit, PCB layout, electrical parts, materials and wiring structures, Appearance shape, the materials of decorative accessories is same, only different color. |
| Channel List            | Please refer to the Note 2.                                                                                                                                                                  |
| Operation frequency     | 2402MHz-2480MHz                                                                                                                                                                              |
| Modulation:             | GFSK                                                                                                                                                                                         |
| Channel number          | 79 CH                                                                                                                                                                                        |
| Transmitter rate:       | 1MHz                                                                                                                                                                                         |
| Power Supply            | DC 3.7V                                                                                                                                                                                      |

| Report number           | FCS202211204W01                                                                                                                                                                              |
| Hardware version number | V1.0                                                                                                                                                                                         |
| Software version number | V1.0                                                                                                                                                                                         |
| Connecting I/O Port(s)  | Please refer to the User's Manual                                                                                                                                                            |

Note:

1. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

2.

| Channel | Frequency | Channel | Frequency | Channel | Frequency | Channel | Frequency |
|---------|-----------|---------|-----------|---------|-----------|---------|-----------|
| 1       | 2402MHz   | 21      | 2422MHz   | 41      | 2442MHz   | 61      | 2462MHz   |
| 2       | 2403MHz   | 22      | 2423MHz   | 42      | 2443MHz   | 62      | 2463MHz   |
| ⋮       | ⋮         | ⋮       | ⋮         | ⋮       | ⋮         | ⋮       | ⋮         |
| 19      | 2420MHz   | 39      | 2440MHz   | 59      | 2460MHz   | 79      | 2480MHz   |
| 20      | 2421MHz   | 40      | 2441MHz   | 60      | 2461MHz   |         |           |

3. Table for Filed Antenna

| Ant. | Brand | Model Name | Antenna Type | Connector | Gain (dBi) | NOTE    |
|------|-------|------------|--------------|-----------|------------|---------|
| 1    | NA    | N/A        | Chip Antenna | N/A       | 4.08       | Antenna |

## 2.2 BLOCK DIGRAM SHOWING THE CONFIGURATION OF SYSTEM TESTED

During testing channel & power controlling software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

Block diagram of EUT configuration for test

Test software: the

The test software was used to control EUT work in continuous TX mode, and select test channel, Wireless mode as below table

| No. | Test model description |
|-----|------------------------|
| 1   | Low channel GFSK       |
| 2   | Middle channel GFSK    |
| 3   | High channel GFSK      |
| 4   | Hopping GFSK           |

Note:

1. All the test modes can be supply by battery, only the result of the worst case recorded in the report. GFSK mode is worst mode.
2. For radiated emission, 3 axis were chosen for testing for each applicable mode.
3. The EUT used fully charge battery when tested.
4. During the test, the dutycycle>98%, the test voltage was tuned from 85% to 115% of the Nominal rate supply votage, and found that the worst case was the nominal rated supply condition, So the report just shows that condition's data

### 2.3 DESCRIPTION OF NECESSARY ACCESSORIES AND SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

#### Necessary accessories

| Item | Equipment | Mfr/Brand | Model/Type No. | Serial No. | Note                                        |
|------|-----------|-----------|----------------|------------|---------------------------------------------|
| 1    | Adapter   | HW        | 0789SK         | N/A        | This adapter is for testing only in report. |
|      |           |           |                |            |                                             |

#### Support units

| Item | Equipment | Mfr/Brand | Model/Type No. | Serial No. | Note |
|------|-----------|-----------|----------------|------------|------|
| N/A  | N/A       | N/A       | N/A            | N/A        | N/A  |
|      |           |           |                |            |      |

#### Note:

- (1) The support equipment was authorized by Declaration of Confirmation.
- (2) For detachable type I/O cable should be specified the length in cm in 『Length』 column.
- (3) “YES” is means “shielded” “with core”; “NO” is means “unshielded” “without core”.

## 2.4 EQUIPMENTS LIST

### Radiation Test equipment

| Kind of Equipment                | Manufacturer               | Type No.     | Company No. | Last calibration | Calibrated until |
|----------------------------------|----------------------------|--------------|-------------|------------------|------------------|
| EMI Test Receiver                | R&S                        | ESRP 3       | FCS-E001    | 2022.01.28       | 2023.01.27       |

### 3 CONDUCTED EMISSION MEASUREMENT

#### 3.1 LIMIT

Operating frequency band. In case the emission fall within the restricted band specified on Part 207(a) limit in the table below has to be followed.

| FREQUENCY (MHz) | Conducted Emissionlimit (dBuV) |           |
|-----------------|--------------------------------|-----------|
|                 | Quasi-peak                     | Average   |
| 0.15 -0.5       | 66 - 56 *                      | 56 - 46 * |
| 0.50 -5.0       | 56.00                          | 46.00     |
| 5.0 -30.0       | 60.00                          | 50.00     |

Note:

- (1) The tighter limit applies at the band edges.
- (2) The limit of " \* " marked band means the limitation decreases linearly with the logarithm of the frequency in the range.

#### 3.2 TEST PROCEDURE

The following table is the setting of the receiver

| Receiver Parameters | Setting  |
|---------------------|----------|
| Attenuation         | 10 dB    |
| Start Frequency     | 0.15 MHz |
| Stop Frequency      | 30 MHz   |
| IF Bandwidth        | 9 kHz    |

- a. The EUT was 0.8 meters from the horizontal ground plane and 0.4 meters from the vertical ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d. LISN at least 80 cm from nearest part of EUT chassis.
- e. For the actual test configuration, please refer to the related Item –EUT Test Photos.

### 3.3 TEST SETUP

Note: 1.Support units were connected to second LISN.

2.Both of LISNs (AMN) are 80 cm from EUT and at least 80 from other units and other metal planes

### 3.4 TEST RESULTS

|              |                  |                    |                    |
|--------------|------------------|--------------------|--------------------|
| Temperature: | 25℃              | Relative Humidity: | 50%                |
| Test Mode:   | GFSK(worst mode) | Test Voltage:      | DC 3.7V by Battery |
| Result:      | L                | Result:            | Pass               |

| No. | Frequency<br>(MHz) | Reading<br>(dBμV) | Correct<br>Factor(dB) | Result<br>(dBμV) | Limit<br>(dBμV) | Margin<br>(dB) | Remark |
|-----|--------------------|-------------------|-----------------------|------------------|-----------------|----------------|--------|
| 1   | 0.1725             | 35.23             | 9.78                  | 45.01            | 64.84           | 19.83          | QP     |

| 9   | 3.9750             | 20.64             | 18.24                 | 38.88            | 56.00           | 17.12          | QP     |
| 10  | 3.9750             | 9.95              | 18.24                 | 28.19            | 46.00           | 17.81          | AVG    |
| 11  | 16.3005            | 25.92             | 20.13                 | 46.05            | 60.00           | 13.95          | QP     |
| 12  | 16.3005            | 9.07              | 20.13                 | 29.20            | 50.00           | 20.80          | AVG    |

|              |                  |                    |                    |
|--------------|------------------|--------------------|--------------------|
| Temperature: | 25°C             | Relative Humidity: | 50%                |
| Test Mode:   | GFSK(worst mode) | Test Voltage:      | DC 3.7V by Battery |
| Result:      | N                | Result:            | Pass               |

Remark:

1. All readings are Quasi-Peak and Average values

## 4. 20 DB BANDWIDTH

### 4.1 Limit

| FCC Part15 (15.247) , Subpart C |                |       |                       |
|---------------------------------|----------------|-------|-----------------------|
| Section                         | Test Item      | Limit | Frequency Range (MHz) |
| 15.247a(1)                      | 20dB bandwidth | N/A   | 2400-2483.5           |

### 4.2 Test Procedure

(1) Connect EUT's antenna output to spectrum analyzer by RF cable.

(2) Set the spectrum analyzer as follows

RBW: 30kHz

VBW: 100kHz

Detector Mode: AVG

Sweep time: auto

Trace mode Max hold

(3) Allow the trace to stabilize, measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission

### 4.3 Test setup

### 4.4 Test results

| TestMode | Channel (MHz) | 20dB Bandwidth (KHz) | Verdict |
|----------|---------------|----------------------|---------|
| Lowest   | 2402MHz       | 998.8                | Pass    |
| Middle   | 2441MHz       | 964.2                | Pass    |
| Highest  | 2480MHz       | 1000.0               | Pass    |

## 5. CONDUCTED OUTPUT POWER

### 5.1 LIMIT

| FCC Part 15 Subpart C |                   |                  |                 |
|-----------------------|-------------------|------------------|-----------------|
| Section               | Test Item         | Limit            | Frequency Range |
| 15.247(b)(3)          | Peak output power | Power <1W(30dBm) | 2400-2483.5     |

### 5.2 TEST PROCEDURE

- (1) The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram above.
- (2) Spectrum Setting:  
RBW=1MHz, VBW=3MHz, Detector=Peak (If 20dB BW ≤1 MHz)  
RBW=3MHz, VBW=8MHz, Detector=Peak (If 20dB BW > 1 MHz)
- (3) The EUT was set to continuously transmitting in the max power during the test.

### 5.3 TEST SETUP

### 5.5 TEST RESULTS

| TestMode | Channel (MHz) | Result (dBm) | Limit (dBm) | Verdict |
|----------|---------------|--------------|-------------|---------|
| Lowest   | 2402MHz       | 4.753        | 30          | Pass    |
| Middle   | 2441MHz       | 4.702        | 30          | Pass    |
| Highest  | 2480MHz       | 3.811        | 30          | Pass    |

Low

## 6 NUMBER OF HOPPING CHANNEL

### 6.1 LIMIT

| FCC Part 15.247, Subpart C<br>RSS-247 Issue 2 |                           |       |                       |        |
|-----------------------------------------------|---------------------------|-------|-----------------------|--------|
| Section                                       | Test Item                 | Limit | Frequency Range (MHz) | Result |
| 15.247<br>(a)(1)(iii) RSS-247                 | Number of Hopping Channel | >15   | 2400-2483.5           | PASS   |

### 6.2 TEST PROCEDURE

a The EUT was directly connected to the spectrum analyzer and antenna output port as shown in the block diagram below.

b Spectrum Setting: RBW= 100KHz, VBW=300KHz, Sweep time = Auto

### 5.3 TEST SETUP

### 6.4 EUT OPERATION CONDITIONS

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

## 6.5 TEST RESULTS

|              |                         |                    |         |
|--------------|-------------------------|--------------------|---------|
| Temperature: | 25 °C                   | Relative Humidity: | 60%     |
| Test Mode:   | Hopping Mode -GFSK Mode | Test Voltage:      | DC 3.7V |

## 7. BAND EDGE AND SPURIOUS(CONDUCTED)

### 7.1 LIMIT

In any 100kHz bandwidth outside the frequency bands in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 30dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power.

### 7.2 TEST PROCEDURE

(1) Connect EUT's antenna output to spectrum analyzer by RF cable.

(2) Establish a reference level by using the following procedure:

|                  |                              |
|------------------|------------------------------|
| Center frequency | DTS Channel center frequency |
| RBW:             | 100kHz                       |
| VBW:             | 300kHz                       |
| Span             | 1.5times the DTS bandwidth   |
| Detector Mode:   | Peak                         |
| Sweep time:      | auto                         |
| Trace mode       | Max hold                     |

(3) Establish Allow the trace to stabilize, use the peak marker function to determine the maximum peak power level to establish the reference level.

(4) Set the spectrum analyzer as follows:

|                              |                                          |
|------------------------------|------------------------------------------|
| RBW:                         | 100kHz                                   |
| VBW:                         | 300kHz                                   |
| Span                         | Encompass frequency range to be measured |
| Number of measurement points | $\geq \text{span}/\text{RBW}$            |
| Detector Mode:               | Peak                                     |
| Sweep time:                  | auto                                     |
| Trace mode                   | Max hold                                 |

(5) Allow the trace to stabilize, use the peak marker function to determine the maximum amplitude of all unwanted emissions outside of the authorized frequency band

### 7.3 TEST SETUP

## 7.4 TEST RESULTS

|              |                 |        |
|--------------|-----------------|--------|
| Eut set mode | CH or Frequency | Result |
| GFSK         | CH1             | Pass   |
|              | CH79            | Pass   |

## 7.5 Original test data

### CH1 2402MHZ

### CH79 2480MHZ

## Spurious emissions

### Low Channel 30MHz-25GHz

### Middle Channel 30MHz-25GHz

# High Channel 30MHz-25GHz

## 7.6 For Hopping Band edge

## 8. RADIATED EMISSION MEASUREMENT

### 8.1 RADIATED EMISSION LIMITS

In any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the Restricted band specified on Part15.205(a)&209(a) limit in the table and according to ANSI C63.10-2013 below has to be followed

LIMITS OF RADIATED EMISSION MEASUREMENT (0.009MHz - 1000MHz)

| Frequencies<br>(MHz) | Field Strength<br>(micorvolts/meter) | Measurement Distance<br>(meters) |
|----------------------|--------------------------------------|----------------------------------|
| 0.009~0.490          | 2400/F(KHz)                          | 300                              |
| 0.490~1.705          | 24000/F(KHz)                         | 30                               |
| 1.705~30.0           | 30                                   | 30                               |
| 30~88                | 100                                  | 3                                |
| 88~216               | 150                                  | 3                                |
| 216~960              | 200                                  | 3                                |
| Above 960            | 500                                  | 3                                |

LIMITS OF RADIATED EMISSION MEASUREMENT (1GHz-25 GHz)

| FREQUENCY (MHz) | (dBuV/m) (at 3M) |         |
|-----------------|------------------|---------|
|                 | PEAK             | AVERAGE |
| Above 1000      | 74               | 54      |

Notes:

- (1) The limit for radiated test was performed according to FCC PART 15C.
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).

For Radiated Emission

| Spectrum Parameter                    | Setting                         |
|---------------------------------------|---------------------------------|
| Attenuation                           | Auto                            |
| Detector                              | Peak/AV                         |
| Start Frequency                       | 1000 MHz(Peak/AV)               |
| Stop Frequency                        | 10th carrier hamonic(Peak/AV)   |
| RB / VB (emission in restricted band) | PK=1MHz / 1MHz, AV=1 MHz /10 Hz |

For Band edge

## 8.2 TEST PROCEDURE

- The measuring distance of at 3 m shall be used for measurements at frequency 0.009MHz up to 1GHz, and above 1GHz.
- The EUT was placed on the top of a rotating table 0.8 meters (above 1GHz is 1.5 m) above the ground at a 3 meter anechoic chamber test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- The height of the equipment shall be 0.8 m (above 1GHz is 1.5 m); the height of the test antenna shall vary between 1 m to 4 m. horizontal and vertical polarizations of the antenna are set to make the measurement.
- The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then QuasiPeak detector mode re-measured.
- If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.
- For the actual test configuration, please refer to the related Item –EUT Test Photos.

Note:

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported

### 8.3 TESTSETUP

#### (A) Radiated Emission Test-Up Frequency Below 30MHz

#### (B) Radiated Emission Test-Up Frequency 30MHz~1GHz

(C) Radiated Emission Test-Up Frequency Above 1GHz

## 8.4. TEST RESULTS

(9KHz-30MHz)

|               |         |                    |                  |
|---------------|---------|--------------------|------------------|
| Temperature:  | 22.7°C  | Relative Humidity: | 61%              |
| Test Voltage: | DC 3.7V | Test Mode:         | GFSK(worst mode) |

| Freq. | Reading  | Limit    | Margin | State | Test Result |
|-------|----------|----------|--------|-------|-------------|
| (MHz) | (dBuV/m) | (dBuV/m) | (dB)   | P/F   |             |
| --    | --       | --       | --     | --    | PASS        |
| --    | --       | --       | --     | --    | PASS        |

### Note:

The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.

Distance extrapolation factor =  $40 \log (\text{specific distance}/\text{test distance})$ (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

### 8.5 (30MHZ-1000MHZ)

## Remark:

1. Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor
2. The emission levels of other frequencies are very lower than the limit and not show in test report.
3. “\*”, means this data is the too weak instrument of signal is unable to test.

Remark:

1. Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor

## 9. AVERAGE TIME OF OCCUPANCY

### 9.1 LIMIT

| FCC Part 5 (15.247), Subpart C |                           |         |                       |
|--------------------------------|---------------------------|---------|-----------------------|
| Section                        | Test Item                 | Limit   | Frequency Range (MHz) |
| 15.247(a)(1)                   | Average Time of Occupancy | 0.4 sec | 2400-2483.5           |

### 9.2 TEST PROCEDURE

- The transmitter output (antenna port) was connected to the spectrum analyzer.
- Set RBW =1MHz/VBW =3MHz.
- Use a video trigger with the trigger level set to enable triggering only on full pulses.
- Sweep Time is more than once pulse time.
- Set the center frequency on any frequency would be measure and set the frequency span to zero span.
- Measure the maximum time duration of one single pulse.
- Set the EUT for DH5, DH3 and DH1 packet transmitting.
- Measure the maximum time duration of one single pulse.
- DH5 Packet permit maximum  $1600 / 79 / 6 = 3.37$  hops per second in each channel (5 time slots RX, 1 time slot TX). So the number of pulses in the observation period of 31.6 seconds is  $3.37 \times 31.6 = 106.6$ .
- DH3 Packet permit maximum  $1600 / 79 / 4 = 5.06$  hops per second in each channel (3 time slots RX, 1 time slot TX). So the number of pulses in the observation period of 31.6 seconds is  $5.06 \times 31.6 = 160$ .
- DH1 Packet permit maximum  $1600 / 79 / 2 = 10.12$  hops per second in each channel (1 time slot RX, 1 time slot TX). So the number of pulses in the observation period of 31.6 seconds is  $10.12 \times 31.6 = 320$ .

## 10. HOPPING CHANNEL SEPARATION MEASUREMENT

### 10.1 LIMIT

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

| Spectrum Parameter | Setting                                                 |
|--------------------|---------------------------------------------------------|
| Attenuation        | Auto                                                    |
| Span Frequency     | > 20 dB Bandwidth or Channel Separation                 |
| RB                 | 30 kHz (20dB Bandwidth) / 30 kHz (Channel Separation)   |
| VB                 | 100 kHz (20dB Bandwidth) / 100 kHz (Channel Separation) |
| Detector           | Peak                                                    |
| Trace              | Max Hold                                                |
| Sweep Time         | Auto                                                    |

### 10.2 TEST PROCEDURE

- The transmitter output (antenna port) was connected to the spectrum analyser in peak hold mode.
- The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were utilised for 20 dB bandwidth measurement.
- The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were utilised for channel separation measurement

### 10.3 TEST SETUP

### 10.4 EUT OPERATION CONDITIONS

The EUT was programmed to be in continuously transmitting mode.

## 10.5 TEST RESULTS

|              |           |                    |       |
|--------------|-----------|--------------------|-------|

| Test Mode:   | GFSK Mode | Test Voltage:      | DC 5V |

| Modulation | Frequency (MHz) | Channel Separation (MHz) | Limit (MHz) | Result |
|------------|-----------------|--------------------------|-------------|--------|
| GFSK       | 2402            | 1.002                    | 0.666       | Pass   |
|            | 2441            | 1.002                    | 0.643       | Pass   |
|            | 2480            | 1.004                    | 0.667       | Pass   |

## 11. ANTENNA REQUIREMENT

### 11.1 STANDARD REQUIREMENT

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. And according to FCC 47 CFR Section 15.247 (b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### 11.2 RESULT

The antennas used for this product are Chip Antenna and no antenna other than that furnished by the responsible party shall be used with the device, the maximum peak gain of the transmit antenna is 4.08dBi.
