

# Shenzhen HTT Technology Co., Ltd.

## TEST REPORT

### FCC Rules and Regulations Part PART 15.249

Report Reference No.....: HTT202212360F01

FCC ID.....: 2A9U6-YML01

Compiled by  
( position+printed name+signature.. File administrators

Ervin Xu

Supervised by  
( position+printed name+signature.. Project Engineer

Bruce Zhu

Approved by  
( position+printed name+signature.. RF Manager

Kevin Yang

Date of issue..... Jan. 04, 2023

Testing Laboratory Name ..... Shenzhen HTT Technology Co.,Ltd.

Address..... 1F, Building B, Huafeng International Robotics Industrial Park,  
Hangcheng Road,Nanchang Community, Xixiang Street, Bao'an  
District, Shenzhen, Guangdong, China

Applicant's name ..... NISHO SHOJI Co.,Ltd.

Address ..... 284-0034, 155-1,Nabasama, Yotsukaido-shi, Chiba-ken, Japan

Standard ..... FCC Rules and Regulations Part PART 15.249

Test item description ..... wireless lavalier microphone

Trade Mark ..... YOCOM

Manufacturer ..... Shen zhen Maction Technology CO., Ltd.

Model/Type reference..... YM-L01

Listed Models ..... YM-L02, YM-L03 ,YM-L04 ,YM-L05, YM-L06 ,YM-L07 ,YM-L08,  
YM-L09 ,YM-L10, YM-L11, YM-L12,YM-L13, YM-L14 ,YM-L15,  
YM-L16 ,YM-L17, YM-L18 ,YM-L19 ,YM-L20

Modulation ..... GFSK

Frequency..... 2404-2447.5MHz

Ratings ..... DC 3.7V Form Battery and DC 5V From External Circuit

Result..... PASS

## TEST REPORT

Equipment under Test : **wireless lavalier microphone**

Model /Type : YM-L01

Listed Models : YM-L02, YM-L03 ,YM-L04 ,YM-L05, YM-L06 ,YM-L07 ,YM-L08,  
YM-L09 ,YM-L10, YM-L11, YM-L12,YM-L13, YM-L14 ,YM-L15,  
YM-L16 ,YM-L17, YM-L18 ,YM-L19 ,YM-L20

**Applicant** : **NISHO SHOJI Co.,Ltd.**

Address : 284-0034, 155-1,Nabasama, Yotsukaido-shi, Chiba-ken, Japan

**Manufacturer** : **Shen zhen Maction Technology CO., Ltd.**

Address : Light Industry Plant 203, Hezhihe Factory, east of Songbai Road,  
Jingbei Village, Shangwu Village Committee, Longteng  
Community, Shiyan Street, Bao 'an District, Shenzhen

| <b>6. TEST PHOTOS OF THE EUT.....</b>                          | <b>25</b> |

## **1. TEST STANDARDS**

The tests were performed according to following standards:

**FCC Rules Part 15.249:** Operation within the bands 902 - 928 MHz, 2400 - 2483.5 MHz, 5725 - 5875 MHz, and 24.0 - 24.25 GHz.

**ANSI C63.10:2013 :** American National Standard for Testing Unlicensed Wireless Devices

**ANSI C63.4: 2014:** –American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40GHz  
Range of 9 kHz to 40GHz

## 2. SUMMARY

### 2.1. General Remarks

|                                |   |               |
|--------------------------------|---|---------------|
| Date of receipt of test sample | : | Dec. 24, 2022 |
| Testing commenced on           | : | Dec. 24, 2022 |
| Testing concluded on           | : | Jan. 04, 2023 |

### 2.2. Product Description

|                     |                                                                                                                                                        |

| Sample ID:          | HTT202212360-1#(Engineer sample)<br>HTT202212360-2#(Normal sample)                                                                                     |
| Operation frequency | 2404-2447.5MHz                                                                                                                                         |
| Modulation          | GFSK                                                                                                                                                   |
| Antenna Type        | Chip antenna                                                                                                                                           |
| Antenna Gain        | 2.5dBi                                                                                                                                                 |

### 2.3. Equipment Under Test

#### Power supply system utilised

|                      |   |                                                                   |                                   |
|----------------------|---|-------------------------------------------------------------------|-----------------------------------|
| Power supply voltage | : | <input type="radio"/> 230V / 50 Hz                                | <input type="radio"/> 120V / 60Hz |
|                      |   | <input type="radio"/> 12 V DC                                     | <input type="radio"/> 24 V DC     |
|                      |   | <input checked="" type="radio"/> Other (specified in blank below) |                                   |

DC 3.7V From Battery

### 2.4. Short description of the Equipment under Test (EUT)

This is a wireless lavalier microphone

For more details, refer to the user's manual of the EUT.

### 2.5. EUT operation mode

The Applicant use Key to control the EUT for staying in continuous transmitting and receiving mode for testing .There is 30 channels provided to the EUT. Channel Low,Mid and High was selected to test.

| Channel | Frequency (MHz) | Channel | Frequency (MHz) |
|---------|-----------------|---------|-----------------|
| 01      | 2404.0          | 16      | 2426.5          |
| 02      | 2405.5          | 17      | 2428.0          |
| 03      | 2407.0          | 18      | 2429.5          |
| 04      | 2408.5          | 19      | 2431.0          |
| 05      | 2410.0          | 20      | 2432.5          |

|    |        |    |        |
|----|--------|----|--------|
| 06 | 2411.5 | 21 | 2434.0 |
| 07 | 2413.0 | 22 | 2435.5 |
| 08 | 2414.5 | 23 | 2437.0 |
| 09 | 2416.0 | 24 | 2438.5 |
| 10 | 2417.5 | 25 | 2440.0 |
| 11 | 2419.0 | 26 | 2441.5 |
| 12 | 2420.5 | 27 | 2443.0 |
| 13 | 2422.0 | 28 | 2444.5 |
| 14 | 2423.5 | 29 | 2446.0 |
| 15 | 2425.0 | 30 | 2447.5 |

Test frequency:

| Channel | Frequency (MHz) |
|---------|-----------------|
| Low     | 2404.0          |
| Mid     | 2425.0          |
| High    | 2447.5          |

## 2.6. Block Diagram of Test Setup

## 2.7. Modifications

No modifications were implemented to meet testing criteria.

### **3. TEST ENVIRONMENT**

#### **3.1. Address of the test laboratory**

**Shenzhen HTT Technology Co.,Ltd.**

1F, Building B, Huafeng International Robotics Industrial Park, Hangcheng Road, Nanchang Community, Xixiang Street, Bao'an District, Shenzhen, Guangdong, China

#### **3.2. Test Facility**

The test facility is recognized, certified, or accredited by the following organizations:

**FCC-Registration No.: 779513 Designation Number: CN1319**

Shenzhen HTT Technology Co.,Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

**A2LA-Lab Cert. No.: 6435.01**

Shenzhen HTT Technology Co.,Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### **3.3. Environmental conditions**

During the measurement the environmental conditions were within the listed ranges:

Radiated Emission:

|                       |              |
|-----------------------|--------------|
| Temperature:          | 23 ° C       |
|                       |              |
| Humidity:             | 48 %         |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

AC Main Conducted testing:

|                       |              |
|-----------------------|--------------|
| Temperature:          | 24 ° C       |
|                       |              |
| Humidity:             | 45 %         |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

Conducted testing:

|                       |              |
|-----------------------|--------------|
| Temperature:          | 24 ° C       |
|                       |              |
| Humidity:             | 45 %         |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

### 3.4. Summary of measurement results

| FCC PART 15.249    |                               |      |
|--------------------|-------------------------------|------|
| FCC Part 15.249(a) | Field Strength of Fundamental | PASS |
| FCC Part 15.209    | Spurious Emission             | PASS |
| FCC Part 15.209    | Band edge                     | PASS |
| FCC Part 15.215(c) | 20dB bandwidth                | PASS |
| FCC Part 15.207    | Conducted Emission            | PASS |
| FCC Part 15.203    | Antenna Requirement           | PASS |

### 3.5. Statement of the measurement uncertainty

Measurement Uncertainty

Conducted Emission Expanded Uncertainty = 2.23dB, k=2

Radiated emission expanded uncertainty(9kHz-30MHz) = 3.08dB, k=2

Radiated emission expanded uncertainty(30MHz-1000MHz) = 4.42dB, k=2

Radiated emission expanded uncertainty(Above 1GHz) = 4.06dB, k=2

### 3.6. Equipments Used during the Test

| Item | Test Equipment                  | Manufacturer                        | Model No.          | Inventory No. | Cal.Date (mm-dd-yy) | Cal.Due date (mm-dd-yy) |
|------|---------------------------------|-------------------------------------|--------------------|---------------|---------------------|-------------------------|

## 4. TEST CONDITIONS AND RESULTS

### 4.1. AC Power Conducted Emission

#### TEST CONFIGURATION

#### TEST PROCEDURE

- 1, The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10.
- 2, Support equipment, if needed, was placed as per ANSI C63.10.
- 3, All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
- 4, If a EUT received DC power from the USB Port of Notebook PC, the PC's adapter received power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5, All support equipments received AC power from a second LISN, if any.
- 6, The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7, Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

#### AC Power Conducted Emission Limit

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following :

| Frequency range (MHz) | Limit (dBuV) |           |
|-----------------------|--------------|-----------|
|                       | Quasi-peak   | Average   |
| 0.15-0.5              | 66 to 56*    | 56 to 46* |
| 0.5-5                 | 56           | 46        |
| 5-30                  | 60           | 50        |

\* Decreases with the logarithm of the frequency.

#### TEST RESULTS

Remark: Both high and low voltages have been tested to show only the worst low voltage test data.

## Notes:

1. An initial pre-scan was performed on the line and neutral lines with peak detector.
2. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission.
3. Final Level = Receiver Read level + LISN Factor + Cable Los

## 4.2. Radiated Emission and Band Edges

### TEST CONFIGURATION

Frequency range 9 KHz – 30MHz

Frequency range 30MHz – 1000MHz

Frequency range above 1GHz-25GHz

**TEST PROCEDURE**

1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz –25GHz.
2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT.
3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
4. Repeat above procedures until all frequency measurements have been completed.
5. The EUT minimum operation frequency was 26MHz and maximum operation frequency was 1910MHz.so radiated emission test frequency band from 9KHz to 25GHz.
6. The distance between test antenna and EUT as following table states:

| Test Frequency range | Test Antenna Type          | Test Distance |
|----------------------|----------------------------|---------------|
| 9KHz-30MHz           | Active Loop Antenna        | 3             |
| 30MHz-1GHz           | Ultra-Broadband Antenna    | 3             |
| 1GHz-18GHz           | Double Ridged Horn Antenna | 3             |
| 18GHz-25GHz          | Horn Antenna               | 1             |

7. Setting test receiver/spectrum as following table states:

| Test Frequency range | Test Receiver/Spectrum Setting                                                                            | Detector |
|----------------------|-----------------------------------------------------------------------------------------------------------|----------|
| 9KHz-150KHz          | RBW=200Hz/VBW=3KHz, Sweep time=Auto                                                                       | QP       |
| 150KHz-30MHz         | RBW=9KHz/VBW=100KHz, Sweep time=Auto                                                                      | QP       |
| 30MHz-1GHz           | RBW=120KHz/VBW=1000KHz, Sweep time=Auto                                                                   | QP       |
| 1GHz-40GHz           | Peak Value: RBW=1MHz/VBW=3MHz,<br>Sweep time=Auto<br>Average Value: RBW=1MHz/VBW=10Hz,<br>Sweep time=Auto | Peak     |

**Field Strength Calculation**

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CL - AG$$

|                           |                                            |
|---------------------------|--------------------------------------------|
| Where FS = Field Strength | CL = Cable Attenuation Factor (Cable Loss) |
| RA = Reading Amplitude    | AG = Amplifier Gain                        |
| AF = Antenna Factor       |                                            |

$$\text{Transd}=AF +CL-AG$$

**RADIATION LIMIT**

According 15.249, the field strength of emissions from intentional radiators operated within 2400MHz-2483.5 MHz shall not exceed 94dBμV/m (50mV/m):

FCC PART 15.249(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a)

Radiated emission limits

| Frequency (MHz) | Distance (Meters) | Radiated (dBμV/m)                          | Radiated (μV/m)       |
|-----------------|-------------------|--------------------------------------------|-----------------------|
| 0.009-0.49      | 3                 | $20\log(2400/F(\text{KHz}))+40\log(300/3)$ | $2400/F(\text{KHz})$  |
| 0.49-1.705      | 3                 | $20\log(24000/F(\text{KHz}))+40\log(30/3)$ | $24000/F(\text{KHz})$ |
| 1.705-30        | 3                 | $20\log(30)+40\log(30/3)$                  | 30                    |
| 30-88           | 3                 | 40.0                                       | 100                   |
| 88-216          | 3                 | 43.5                                       | 150                   |
| 216-960         | 3                 | 46.0                                       | 200                   |
| Above 960       | 3                 | 54.0                                       | 500                   |

**TEST RESULTS**

Remark:

1. This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X position.
2. Both modes of GFSK were tested at Low, Middle, and High channel and recorded worst mode at GFSK
3. Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.

Note:1). Level (dB $\mu$ V/m) = Reading (dB $\mu$ V) + Factor (dB/m)

2). Factor (dB/m) = Antenna Factor (dB/m) + Cable loss (dB) - Pre Amplifier gain (dB)

3). Margin (dB) = Limit (dB $\mu$ V/m) - Level (dB $\mu$ V/m)

Remark: Factor = Antenna Factor + Cable Loss – Pre-amplifier.

## Remark:

- (1) Data of measurement within this frequency range shown “---” in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
- (2) When the test results of Peak Detected below the limits of Average Detected, the Average Detected is not need completed.

### 4.3. 20dB Bandwidth Measurement

#### TEST CONFIGURATION

#### TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 30KHz RBW and 300KHz VBW.

The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 20dB.

#### LIMIT

N/A

#### TEST RESULTS

| Modulation | Channel | 20dB bandwidth (MHz) | Result |
|------------|---------|----------------------|--------|
| GFSK       | Low     | 1.115                | PASS   |
|            | Mid     | 1.136                |        |
|            | High    | 1.115                |        |

Note: 1.The test results including the cable lose.

## GFSK

## Low

## Mid

## High

#### **4.4. Antenna Requirement**

##### **Standard Applicable**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (c), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

##### **Antenna Information**

The maximum gain of antenna was 2.5dBi.

Remark: The antenna gain is provided by the customer, if the data provided by the customer is not accurate, Shenzhen HTT Technology Co., Ltd. does not assume any responsibility.
