Sample Description

Product : Christmas Tree Lighting

Model No. : LxGxYxS(the first x=30-120; the second x=0-5; the third x=0100-2300)
LlxYx(the first x=06-220; the second x=0010-2300)

Electrical Rating : 120V/60Hz

FCC ID : 2AABT-CW004

Date Received : 13 January 2017

Date Test Conducted : 13 January 2017-10 February 2017

Test standards : **FCC Part 15: 2015 Subpart B**

Test Result : Pass

Conclusion : The submitted samples complied with the above rules/standards.

Remark : TRF No.: FCC Part 15 2015 (Subpart B)-a
Effective date: 11 November 2016

Test Results Conclusion (with Justification)

RE: EMC Testing Pursuant to FCC Part 15, Subpart B Performed on the Christmas Tree Lighting, Models: LxGxYxS(the first x=30-120; the second x=0-5; the third x=0100-2300), LIXYx(the first x=06-220; the second x=0010-2300).

We tested the Christmas Tree Lighting, Model: LI06Y2300 to determine if it was in compliance with the relevant FCC rules as marked on the Test Results Summary. We found that the unit met the requirement of FCC Part 15, Subpart B when tested as received. The worst case's test data was presented in this test report.

The LIXYx series are same as LxGxYxS, only except nomenclature and LIXYx series include Wreath /Garland/ Teardrop/Tree /Swag products.

The Christmas Tree Light can be power by below adapter:

Adapter model TS-3W28V, input 120V, 60Hz, output DC28V0.1A 3W
Adapter model TS-8W29V, input 120V, 60Hz, output DC29V0.28A 8W
Adapter model TS-13W29V, input 120V, 60Hz, output DC29V0.45A 13W
Adapter model TS-29V0.9A, input 120V, 60Hz, output DC29V0.9A 26.1W
Adapter model MTS810-29V, input 120V, 60Hz, output DC29V 15W
Adapter model MTS811-29V, input 120V, 60Hz, output DC29V 15W
Adapter model TS-17W29V, input 120V, 60Hz, output DC29V17W
Adapter model TS-29V0.6A, input 120V, 60Hz, output DC29V0.6A
Adapter model TS-20W29V, input 120V, 60Hz, output DC29V20W

Adapter TS-8W29V, TS-13W29V, TS-3W28V they have the same circuit and mechanical design, their different is that the output current and output electronic components parameters. Adapter MTS810-29V and MTS-810-29V are all identical except the model number. Adapter TS-17W29V, TS-29V0.6A, TS-20W29V, TS-29V0.9A they have the same circuit and mechanical design, their different is that the output current and output electronic components parameters.

All models can use the receiver PDR-007-29V-R or PDR-007-29V-AR or PDR-012-29V-R or PDR-012-29V-AR and with Remote control PDT-001-29V.

The receiver PDR-007-29V-R, PDR-007-29V-AR, PDR-012-29V-R and PDR-012-29V-AR are identical except the model number.

So the Model: LI06Y2300 with receiver PDR-007-29V-R and adapter mode TS-3W28V, MTS810-29V, TS-29V0.9A was tested in this report.

Product information:

LxGxYxS (the first x=30-120; the second x=0-5; the third x=0100-2300)

Note: "L" means that the low voltage. The first "x" indicates the size of the tree, said the use of height from 3ft-12ft. "Gx" number of lines, G0 represents 0 drag line G5 on behalf of 5 drag line. "Y" means tree stand. M means the tree is to use ordinary tree foot. R which means

that the tree is to use rotating tree foot, The third "x" represents the number of lamp, from 100 to 2300 lamp, "S" means that the tree pin

LIXYx(the first x=06-220; the second x=0010-2300)

Note: "L" means low voltage, "I" indicates for indoor use only, if blank means for indoor and outdoor use. The first "x" indicates the size of Wreath/Garland/Teardrop/Tree/Swag, the size is from 06 in-220 in, for Wreath/Teardrop/Tree/Swag, The size is from 06 ft-50 ft in for Garland. "Y" means type of product. The second "x" represents the number of lamps from 10 to 2300 lamps.

The receiver frequency is 433.92MHz, So, An un-modulated CW signal at the operating frequency 433.92MHz of the EUT is supplied to the EUT for all measurements.

The receiver type of the EUT is super heterodyne.

Conclusion:

The sample as received complied with the FCC Part 15 requirement.

The production units are required to conform to the initial sample as received when the units are placed on the market.

LABORATORY MEASUREMENTS

Configuration Information

Equipment Under Test (EUT):	Christmas Tree Lighting	
Model:	LI06Y2300	
Serial No.:	Not Labeled	
Support Equipment:	N/A	
Rated Voltage:	120V/60Hz	
Condition of Environment:	Temperature	: 22~28°C
	Relative Humidity:	35~60%
	Atmosphere Pressure	86~106kPa

Notes:

1. The EMI measurements had been made in the operating mode producing the largest emission in the frequency band being investigated consistent with normal applications.
An attempt had been made to maximize the emission by varying the configuration of the EUT.

2. Test Sites:

All of the tests are performed at:

Intertek Testing Services Shenzhen Ltd. Guangzhou Branch. located at Block E, No.7-2 Guang Dong Software Science Park, Caipin Road, Guangzhou Science City, GETDD Guangzhou, 510663, China. This test facility and site measurement data have been fully placed on file with the FCC, test firm registration number is 549654.

5 TEST RESULTS

5.1 Conducted Disturbance Voltage at mains ports

Test Result: Pass

5.1.1 Block Diagram of Test Setup

5.1.2 Test Setup and Procedure

Test was performed according to ANSI C63.4: 2014. The EUT was set to achieve the maximum emission level. The mains terminal disturbance voltage was measured with the EUT in a shielded room. The EUT was connected to AC power source through an Artificial Mains Network which provides a 50Ω linear impedance. Artificial hand is used if appropriate (for handheld apparatus). The load/control terminal disturbance voltage was measured with passive voltage probe if appropriate.

The table-top EUT was placed on a 0.8m high non-metallic table above earthed ground plane (Ground Reference Plane). And for floor standing EUT, was placed on a 0.1m high non-metallic supported on GRP. The EUT keeps a distance of at least 0.8m from any other of the metallic surface. The Artificial Mains Network is situated at a distance of 0.8m from the EUT.

During the test, mains lead of EUT excess 0.8m was folded back and forth parallel to the lead so as to form a horizontal bundle with a length between 0.3m and 0.4m.

The bandwidth of test receiver was set at 9 kHz. The frequency range from 150 kHz to 30MHz was checked.

5.1.3 Limit

Test Result: Pass

5.2.1 Block Diagram of Test Setup

5.2.2 Test Setup and Procedure

The measurement was applied in a 3 m semi-anechoic chamber. The EUT and simulators were placed on a 0.8m high wooden turntable above the horizontal metal ground plane. The turn table rotated 360 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna which was mounted on an antenna mask. The antenna moved up and down between from 1meter to 4 meters to find out the maximum emission level.

Broadband antenna was used as receiving antenna. Both horizontal and vertical polarization of the antenna was set on measurement. In order to find the maximum emission, all of the interface cables were manipulated according to ANSI C63.4: 2014 requirement during radiated test. The bandwidth setting on R&S Test Receiver was 120 kHz. The frequency range from 30MHz to 1000MHz was checked.

For an unintentional radiator, including a digital device, the spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

Highest frequency generated or used in the device or on which the device operates or tunes (MHz)	Upper Frequency of Radiated Measurement
Below 1.705 MHz	30MHz
1.705 MHz – 108 MHz	1 GHz
108 MHz – 500 MHz	2 GHz
500 MHz – 1 GHz	5 GHz
Above 1 GHz	5th harmonic of the highest frequency or 40 GHz, whichever is lower.
At transitional frequencies the lower limit applies.	

Remark: Radiated Emission was performed from 30 MHz to 1 GHz.

5.3.2 Test Setup and Procedure

The measurement was applied in a semi-anechoic chamber with absorbing material placed on the ground. The EUT were placed on a 0.8m high wooden turntable above the horizontal metal ground plane. The turntable varied every 30 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna which was mounted on an antenna pole. The antenna was set as same as the height of the radiation centre of the EUT.

Horn antenna was used as receiving antenna. Both horizontal and vertical polarization of the antenna was set on measurement. In order to find the maximum emission, all of the interface cables were manipulated during radiated test.

For an unintentional radiator, including a digital device, the spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

Remark: The measured PK value is below AV limit so the result was passed.

5.3.5 Measurement uncertainty

Uncertainty: 4.8 dB in the frequency range of 1GHz-25 GHz at a level of confidence of 95%
