

802.11n Wireless Router

R0300/WR366E

V1.0

User Manual

Chapter 1. Introduction

Thank you for choosing the Wireless Router. This router provides dedicated solution for Small Office/Home Office (SOHO) networks. your local wired or wireless network can share Internet access, files and fun for multiple PCs through one ISP account. It is an easy Web-based setup for installation and management. Even though you may not be familiar with the router, this guide will make configuring the router easy. Before installing the router, please look through this guide to know all the router's functions.

1.1 Product Features

- ◆ Includes Wireless AP, Router, 4-Port Switch, and Firewall in one
- ◆ Supports WPS (Wi-Fi Protected Setup) encryption method
- ◆ Complies with IEEE 802.11n, IEEE 802.11g, IEEE 802.11b, IEEE 802.3 and IEEE 802.3u standards
- ◆ Supports 64/128-bit WEP, WPA, WPA2, WPA&WPA2 encryption methods
- ◆ Provides one 10/100Mbps Auto-Negotiation Ethernet WAN port
- ◆ Provides four 10/100Mbps Auto-Negotiation Ethernet LAN ports
- ◆ Supports xDSL/Cable MODEM, static and dynamic IP in community networking
- ◆ Supports Auto MDI/MDIX
- ◆ Supports LAN access control over Internet connection
- ◆ Supports WDS wireless network extension

1.2 Package contents

The following contents should be found in your box:

One Wireless Router

One power adapter for Wireless Router

Quick Installation Guide

Note: If any of the listed contents are damaged or missing, please contact the retailer from whom you purchased the product for assistance.

1.3 Led Indicator and port description

The LED indicators displayed on the front panel, the status of these LED indicators represent the device's working circs. For details, please refer to below:

Name	Status	Description
Power	off	No Power
	on	Power on
WAN/ LAN(1-4)	off	There is no device linked to the corresponding port
	on	Connected to a device through the corresponding port
	Flash	Sending or receiving data over corresponding port

Chapter 2. Installation Preparation

2.1 Connecting the Router

2.2 Configure Computer

Follow the instructions below to configure a computer running Windows XP:

2.2.1 From the **Start** menu on your desktop, go to **Settings**, and then click on Network Connections.

2.2.2 In the **Network Connections** window, right-click on **Local Area Connection**, then click **Properties**.

2.2.3 In the **General** tab of **Local Area Connection Properties**, Click **Internet Protocol (TCP/IP)** under "This connection uses the following items:". Then click on the **Properties** button.

2.2.4 Select "**Obtain an IP address automatically**" and the "**Obtain DNS server address automatically**" by clicking the radio-button. Click **OK** .

Chapter 3. Installation Guide

This User Guide recommends using the “Quick Installation Guide” for first-time installation. For advanced users, if you want to know more about this device and make use of its functions adequately, you need to read this chapter and configure advanced settings through the Web-based Utility.

3.1 Login the Router

Input the website <http://192.168.1.1> in Internet explorer address column. User should see the login page, input the user name and password (default user name and password is “**admin**”), login windows as below:

click “**ok**” button enter the main page

After your successful login, you can configure and manage the device. There are main menus on the left of the web-based utility. Submenus will be available after you click one of the main menus. On the right of the web-based utility, there are the detailed explanations and instructions for the corresponding page. To apply any settings you have altered on the page, please click the **Apply changes** button.

3.2 Quick Installation Guide

Click "**Router Setting**" menu then show quick Installation window:

802.11bgn Wireless Router

Router Settings

Advanced Settings

Modify work mode,WAN access type,SSID,wireless password at this page.

☒ **AP/Router:** In this mode, the device is supposed to connect to internet via ADSL/Cable Modem or other ethernet network. The NAT is enabled and PCs as wireless client share the same IP to ISP through WAN port. The connection type can be setup in WAN page by using PPPOE, DHCP client, static IP.

☐ **Repeater:** In this mode, ethernet ports and wlan are bridged together and the wireless client will connect to ISP access point. The NAT is enabled and PCs in ethernet port or other wireless client share the same IP to ISP through wireless LAN. You must connect to the ISP AP in Repeater scan page. The connection type can be setup in WAN page by using PPPOE, DHCP client, static IP.

WAN Access Type: ← select the wan type

Network name(SSID): ← input the wireless name

Encryption: ← select the encryption

Wireless Password: ← input the wireless password
(Above 8 characters)

WAN Access Type: you can select **Static IP**, **DHCP**, **PPPoE**;

Encryption: you can select **WPA Mixed** and **None**;

3.3 Advanced setup

3.3.1 Operation Mode

802.11bgn Wireless Router

Operation Mode

You can setup different modes to LAN and WLAN interface for NAT and bridging function.

☒ **Router:** In this mode, the device is supposed to connect to internet via ADSL/Cable Modem or other ethernet network. The NAT is enabled and PCs as wireless client share the same IP to ISP through WAN port. The connection type can be setup in WAN page by using PPPOE, DHCP client, static IP.

☐ **Bridge:** In this mode, all ethernet ports and wireless interface are bridged together and NAT function is disabled. All the WAN related function and firewall are not supported.

☐ **Repeater:** In this mode, ethernet ports and wlan are bridged together and the wireless client will connect to ISP access point. The NAT is enabled and PCs in ethernet port or other wireless client share the same IP to ISP through wireless LAN. You must connect to the ISP AP in Repeater scan page. The connection type can be setup in WAN page by using PPPOE, DHCP client, static IP.

3.3.2 Wireless Settings

802.11bgn Wireless Router

Wireless Basic Settings

This page is used to configure the parameters for wireless LAN clients which may connect to your Access Point.

☐ **Disable Wireless LAN Interface**

Band: 2.4 GHz (B+G+N)

Mode: AP

Network Type: Infrastructure

SSID: WIRELESS

Channel Width: 40MHz

Control Sideband: Upper

Channel Number: 11

Broadcast SSID: Enabled

Associated Clients:

☐ **Enable Mac Clone (Single Ethernet Client)**

☐ **Enable Universal Repeater Mode (Acting as AP and client simultaneously)**

SSID of Extended Interface: WIRELESS RPT0

Disable wireless LAN Interface : Close wireless function .

Band : you can select as below:

2.4G Hz(B):11b mode, rate is 11 Mbps

2.4G Hz (G):11g mode, rate is 54 Mbps

2.4G Hz(N):11n mode, rate is 150 Mbps(1T1R)300 Mbps(2T2R)

2.4G Hz (B+G):11b/g mode, rate is 11 Mbps and 54 Mbps

2.4G Hz(G+N):11g/n mode, rate is 54 Mbps,150 Mbps /300 Mbps

2.4G Hz(B+G+N):11b/g/n mode, rate is 11 Mbps,54 Mbps,150 Mbps /300 Mbps

Mode: Can select one of **AP, CLIENT, WDS, AP+WDS**

Network Type : default is **infrastructure**, when Mode is Client , you also can set it to **Ad-hoc**.

SSID: Wireless LAN status authentication name ,User can access the wireless networking through status authentication name only .

Channel Width: you can select **20MHz** and **40MHz**.

Channel Sideband: you can select **Upper** or **Lower**. default is **Upper** .

Channel Number : the current channel router used.

Broadcast SSID: you can select **Disable** or **Enable**. default is **Enable**.

Associated clients : Click "**Show Active Clients**" button ,it will show " Active Wireless Client Table" , You can see the client's status .

Enable Mac Clone (Single Ethernet Client): Enable Mac Clone.

Enable Universal Repeater Mode (Acting as AP and client simultaneously): Enable Universal Repeater Mode.

SSID of Extended Interface: Only when the Enable Universal Repeater Mode is available.

3.3.3 Security Settings

This page allows you setup the wireless security. Turn on WEP or WPA by using Encryption Keys could prevent any unauthorized access to your wireless network.

802.11bgn Wireless Router

Wireless Security Setup

This page allows you setup the wireless security. Turn on WEP or WPA by using Encryption

Encryption:

Key format:

password:

Encryption: Support None ,WEP ,WPA2 ,WPA2 Mixed.

Key Format: Support Passphrase ,Hex (64 characters)

password : input 8~128 characters password.

3.3.4 LAN Settings

This page is used to configure the parameters for local area network which connects to the LAN port of your Router. Here you may change the setting for IP address, subnet mask, DHCP, etc..

802.11bgn Wireless Router

LAN Interface Setup

This page is used to configure the parameters for local area network which connects to the LAN port of your Access Point.

IP Address:

Subnet Mask:

Default Gateway:

DHCP:

DHCP Client Range: -

DHCP Lease Time: (1 ~ 10080 minutes)

Static DHCP:

Domain Name:

802.1d Spanning Tree:

Clone MAC Address:

IP Address: the router's LAN IP address , default is **192.168.1.1**,you can according request to change it .

Subnet Mask: the router's LAN subnet mask, default is **255.255.255.0**

Default Gateway: the router's default is **0.0.0.0**, you can according request to change it.

DHCP: you can select one of **Server, Disable, Client**. Default is **Server**. that the DHCP Server can configure the TCP/IP protocol of your LAN computer automatically. For the **Server** mode, it must fill in the DHCP client address range.

DHCP Client Range: default is **192.168.1.100-192.168.1.200**. Click to **show client** button to display the DHCP client information.

Domain Name: default is **Realtek**.

802.1d spanning tree: you can select **Disable** or **Enable**. default is **Disable**.

Clone MAC Address: you can input a MAC address for use clone function.

3.3.5 WAN Settings

This page is used to configure the parameters for Internet network which connects to the WAN port of your Access Point. Here you may change the access method to **Static IP, DHCP, PPPoE** by click the item value of WAN Access type.

A. Static IP

If your access type is **Static IP**, It means you have static IP address ISP supply, so you need to fill in follow details:

802.11bgn Wireless Router

This page is used to configure the parameters for Internet network which connects to the WAN port of your Access Point. WAN Access type.

WAN Access Type:

IP Address:

Subnet Mask:

Default Gateway:

MTU Size: (1400-1500 bytes)

DNS 1:

DNS 2:

DNS 3:

Clone MAC Address:

☒ Enable uPNP

☒ Enable IGMP Proxy

☐ Enable Ping Access on WAN

☐ Enable Web Server Access on WAN

☒ Enable IPsec pass through on VPN connection

☒ Enable PPTP pass through on VPN connection

☒ Enable L2TP pass through on VPN connection

☐ Enable IPv6 pass through on VPN connection

IP address: The router's WAN IP address that the ISP supply, If you not sure can check with ISP.

Subnet Mask: The router's subnet mask that the ISP supply, normally it is 255.255.255.0.

Default Gateway: Fill in yours gateway that the ISP supply, if you not sure can check with ISP.

B. DHCP Client

If your access type is **DHCP Client**, then you can get the IP address from the ISP. it means you only need connect the ISP line with internet to the router's WAN port. You do not need to enter the information like other modes.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

RF Exposure Warning Statements:

The distance between user and products should be no less than 20cm during normal operations.
