

# TEST REPORT

Reference No. .... : WTD21D08085396W  
FCC ID..... : 2AADC-BK7  
Applicant..... : Inspectron, Inc.  
Address ..... : 29108 Lorie Lane Wixom, MI 48393 USA  
Manufacturer ..... : Wuxi Vision Optoelectronic Technology Co., Ltd  
Address ..... : Room 102, No.42 Building Wuxi Zhongguancun Software Park Xinwu District, Wuxi City, Jiangsu Province, China  
Product Name ..... : BK7000  
Model No. .... : BK7000  
Standards ..... : FCC CFR47 Part 15 E Section 15.407  
Date of Receipt sample..... : 2021-08-19  
Date of Test..... : 2021-08-19 to 2021-10-09  
Date of Issue ..... : 2021-10-09  
Test Result ..... : Pass

Remarks:

The results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company.

The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

## 4 General Information

### 4.1 General Description of E.U.T.

|                      |                                                                       |
|----------------------|-----------------------------------------------------------------------|
| Product:             | BK7000                                                                |
| Model(s):            | BK7000                                                                |
| Model Description:   | N/A                                                                   |
| Wi-Fi Specification: | 2.4G-802.11b/g/n HT20/n HT40<br>5G-802.11a/ n(HT20/40)/ac(HT20/40/80) |
| Bluetooth Version:   | Bluetooth v4.1 with BLE                                               |
| Hardware Version:    | REV.E                                                                 |
| Software Version:    | 20.09.21                                                              |
| Note:                | N/A                                                                   |

### 4.2 Details of E.U.T.

|                       |                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------|
| Operation Frequency:  | 802.11a/ n(HT20/40)/ac(HT20/40/80): 5150MHz to 5250MHz<br>802.11a/ n(HT20/40)/ac(HT20/40/80): 5725MHz to 5850MHz   |
| Max. RF output power: | U-NII-1: 16.17dBm<br>U-NII-3: 10.06dBm                                                                             |
| Type of Modulation:   | OFDM                                                                                                               |
| Antenna installation: | internal permanent antenna                                                                                         |
| Antenna Gain:         | U-NII-1: 4dBi<br>U-NII-3: 4dBi                                                                                     |
| Ratings:              | Battery DC 3.7V, 3000mAh<br>DC 5.0V, 3.0A, 15.0W charging from adapter<br>(Adapter: Input:100-240V~ 50/60Hz, 0.6A) |
| Adapter:              | Model: ICP20-050-3000B                                                                                             |

### 4.3 Channel List

| U-NII-1 (5.15-5.25GHz) |                | U-NII-3 (5.725-5.85GHz) |                |
|------------------------|----------------|-------------------------|----------------|
| channel                | Frequency(MHz) | channel                 | Frequency(MHz) |
| 36                     | 5180           | 149                     | 5745           |
| 38                     | 5190           | 151                     | 5755           |
| 40                     | 5200           | 153                     | 5765           |
| 42                     | 5210           | 155                     | 5775           |
| 44                     | 5220           | 157                     | 5785           |
| 46                     | 5230           | 159                     | 5795           |
| 48                     | 5240           | 161                     | 5805           |
|                        |                | 165                     | 5825           |

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

For 802.11a/n(HT20)/ac(HT20):

| channel | Frequency(MHz) | channel | Frequency(MHz) |
|---------|----------------|---------|----------------|
| 36      | 5180           | 149     | 5745           |
| 40      | 5200           | 157     | 5785           |
| 48      | 5240           | 165     | 5825           |

For 802.11 n(HT40)/ac(HT40):

| channel | Frequency(MHz) | channel | Frequency(MHz) |
|---------|----------------|---------|----------------|
| 38      | 5190           | 151     | 5755           |
| 46      | 5230           | 159     | 5795           |

For 802.11 ac(HT80):

| channel | Frequency(MHz) | channel | Frequency(MHz) |
|---------|----------------|---------|----------------|
| 42      | 5210           | 155     | 5775           |

#### 4.4 Test Mode Description:

During testing, Channel and Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

Transmitting duty cycle is no less 98%.

The software is installed in operation system, named "RFTestTool.apk", Version 1, date 20160518.

| Test Items         | Mode           | Data Rate | Channel                                 | TX/RX |

#### 4.5 Test Facility

The test facility has a test site registered with the following organizations:

**ISED CAB identifier: CN0013. Test Firm Registration No.: 7760A.**

Waltek Testing Group Co., Ltd. Has been registered and fully described in a report filed with the Industry Canada. The acceptance letter from the Industry Canada is maintained in our files.

Registration number 7760A, October 15, 2016.

**FCC Designation No.: CN1201. Test Firm Registration No.: 523476.**

Waltek Testing Group Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration number 523476, September 10, 2019.

## 5 Equipment Used during Test

### 5.1 Equipments List

| Conducted Emissions Test Site 1#                              |                            |                                  |              |                 |                       |                      |

## 7 Conducted Emission

Test Requirement: FCC CFR 47 Part 15 Section 15.207

Test Method: ANSI C63.10:2013

Test Result: PASS

Frequency Range: 150kHz to 30MHz

Class/Severity: Class B

Limit:

| Frequency (MHz) | Limit (dB $\mu$ V) |          |
|-----------------|--------------------|----------|
|                 | Quasi-peak         | Average  |
| 0.15 to 0.5     | 66 to 56*          | 56 to 46 |
| 0.5 to 5        | 56                 | 46       |
| 5 to 30         | 60                 | 50       |

### 7.1 E.U.T. Operation

Operating Environment :

Temperature: 21.5 °C

Humidity: 51.9 % RH

Atmospheric Pressure: 101.2kPa

EUT Operation :

The test was performed in TX transmitting mode, the worst data were shown in the report.

### 7.2 EUT Setup

The conducted emission tests were performed using the setup accordance with the ANSI C63.10.

### 7.3 Measurement Description

The maximised peak emissions from the EUT was scanned and measured for both the Live and Neutral Lines. Quasi-peak & average measurements were performed if peak emissions were within 6dB of the average limit line.

7.4 Conducted Emission Test Result

An initial pre-scan was performed on the live and neutral lines.

Worst Mode: WIFI mode ( 802.11a mode low channel )

Live line:

### 8.1 EUT Operation

Operating Environment :

Temperature: 23.5 °C

Humidity: 52.1 % RH

Atmospheric Pressure: 101.2kPa

EUT Operation :

The test was performed in transmitting mode, the test data were shown in the report.

## 8.2 Test Setup

The radiated emission tests were performed in the 3m Semi- Anechoic Chamber test site, using the setup accordance with the ANSI C63.10: 2013.

The test setup for emission measurement below 30MHz.

The test setup for emission measurement from 30 MHz to 1 GHz.

The test setup for emission measurement above 1 GHz.

8.3 Spectrum Analyzer Setup

Below 30MHz

Sweep Speed ..... Auto  
IF Bandwidth.....10kHz  
Video Bandwidth.....10kHz  
Resolution Bandwidth.....10kHz

30MHz ~ 1GHz

Sweep Speed ..... Auto  
Detector .....PK  
Resolution Bandwidth.....100kHz  
Video Bandwidth.....300kHz

Above 1GHz

Sweep Speed ..... Auto  
Detector .....PK  
Resolution Bandwidth.....1MHz  
Video Bandwidth.....3MHz  
Detector .....Ave.  
Resolution Bandwidth.....1MHz  
Video Bandwidth.....10Hz

## 8.4 Test Procedure

1. The EUT is placed on a turntable, which is 0.8m above ground plane for below 1GHz and 1.5m for above 1GHz.
2. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
3. EUT is set 3m away from the receiving antenna, which is moved from 1m to 4m to find out the maximum emissions.
4. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
5. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
6. Repeat above procedures until the measurements for all frequencies are complete.
7. The radiation measurements are performed in X,Y and Z axis positioning(X denotes lying on the table, Y denotes side stand and Z denotes vertical stand),the worst condition was tested putting the eut in X axis,so the worst data were shown as follow.
8. A 2.4GHz high -pass filter is used during radiated emissions above 1GHz measurement.

## 8.5 Corrected Amplitude & Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain from the Amplitude reading. The basic equation is as follows:

$$\text{Corr. Ampl.} = \text{Indicated Reading} + \text{Antenna Factor} + \text{Cable Factor} - \text{Amplifier Gain}$$

The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of -7dB means the emission is 7dB below the maximum limit for Class B. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Corr. Ampl.} - \text{Limit}$$

## 8.6 Summary of Test Results

Test Frequency: 9KHz~30MHz

| Frequency                   | Measurement results dB $\mu$ V @3m | Detector PK/QP | Correct factor dB/m | Extrapolation factor dB | Measurement results (calculated) dB $\mu$ V/m @30m | Limits dB $\mu$ V/m @30m | Margin dB |

|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Requirement: | FCC CFR47 Part 15 Section 15.407                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Test Method:      | ANSI C63.10 2013                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Test Limit:       | (1) For transmitters operating in the 5.15-5.25 GHz band: All emissions outside of the 5.15-5.35 GHz band shall not exceed an e.i.r.p. of -27dBm/MHz.<br>(2) For transmitters operating in the 5.725-5.85 GHz band: All emissions within the frequency range from the band edge to 10 MHz above or below the band edge shall not exceed an e.i.r.p. of -17 dBm/MHz; for frequencies 10 MHz or greater above or below the band edge, emissions shall not exceed an e.i.r.p. of -27 dBm/MHz. |
| Test Result:      | PASS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

### 10.1 Test Produce

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
3. Set RBW to 100 kHz and VBW of spectrum analyzer to 300 kHz with a convenient frequency span including 100 kHz bandwidth from band edge.
4. Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.
5. Repeat above procedures until all measured frequencies were complete.

10.2 Test Result

Test result plots shown as follows:

802.11a U-NII-1 Band edge-left side

## 11 6 dB Bandwidth

Test Requirement: FCC CFR47 Part 15 Section 15.407(e)  
 KDB662911 D01 Multiple Transmitter Output v02r01  
 Test Method: KDB789033 D02 General U-NII Test Procedures New Rules v02r01  
 Section C  
 Test Limit:  $\geq 500$  kHz  
 Test Result: PASS

### 11.1 Test Procedure:

1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum;
2. Set the spectrum analyzer: RBW = 100kHz, VBW = 300kHz

### 11.2 Test Result:

| Band    | Operation mode | 6 dB Bandwidth (MHz) |        |       |
|---------|----------------|----------------------|--------|-------|
|         |                | Low                  | Middle | High  |
| U-NII-3 | 802.11a        | 16.33                | 16.35  | 16.36 |
|         | 802.11n(HT20)  | 17.30                | 17.27  | 17.24 |
|         | 802.11n(HT40)  | 35.46                | /      | 35.47 |
|         | 802.11ac(HT20) | 17.06                | 17.55  | 17.28 |
|         | 802.11ac(HT40) | 36.01                | /      | 35.73 |
|         | 802.11ac(HT80) | /                    | 75.12  | /     |

Test result plots shown as follows:

### 13.1 Test Procedure:

1. Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum.
2. Set the spectrum analyzer: RBW = 1 MHz. VBW = 3 MHz. Sweep = auto; Detector Function = Peak, Set the span to fully encompass the DTS bandwidth.
3. Keep the EUT in transmitting at lowest, medium and highest channel individually. Record the max value.
