Appendix A: Test results for FCC 27 / RSS-130, RSS-139, RSS-Gen: LTE Cat-4 Bands 4, 8, 12, 13, 66.....8

Competences and guarantees

DEKRA Testing and Certification S.A.U. is a testing laboratory accredited by the National Accreditation Body (ENAC - Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification is an FCC-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

DEKRA Testing and Certification is an ISED-recognized accredited testing laboratory, CABid: ES1909, Company Number: 4621A, with the appropriate scope of accreditation that covers the performed tests in this report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification S.A.U. has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification S.A.U. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification S.A.U. at the time of performance of the test.

DEKRA Testing and Certification S.A.U. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document. **IMPORTANT:** No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification S.A.U.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification S.A.U.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification S.A.U. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Testing and Certification S.A.U. internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample CA410 is ideal for adding LTE connectivity to electronics devices for industrial Internet of Things (IoT), Machine-to-Machine (M2M) and broadband consumer applications. CA410 is compliant with CBRS networks operating on LTE band 48 in USA, with US B8 – known as Anterix band - and with other US MNO bands: bands 2/4/5/12/13/66 as well as Firstnet LTE band 14 and band 26 used in private networks.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples undergoing test have been selected by: The client.

- Sample S/01 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
75462C/015	LTE Cat-4	CA410-EVK	FOX-23-26-0660	25-07-2023

Sample S/01 has undergone the following test(s): The conducted tests indicated in Appendix A.

- Sample S/02 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
75462C/014	LTE Cat-4	CA410-EVK	FOX-23-26-0647	25-07-2023
75462C/007	Antenna	-	-	25-07-2023
75462C/008	Antenna	-	-	25-07-2023

Sample S/02 has undergone the following test(s): The radiated tests indicated in Appendix A.

Testing period and place

Test Location	DEKRA Testing and Certification S.A.U.
Date (start)	2023-08-02
Date (finish)	2023-09-26

Document history

Report number	Date	Description
75462RRF.003	2023-10-17	First release.

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the semi-anechoic chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
-------------	------------------------------

Relative humidity	Min. = 20 % Max. = 75 %
-------------------	----------------------------

Remarks and comments

The tests have been performed by the technical personnel: Ireneo Bibang, Rafael Fernández, Carmen Vázquez, Pablo Redondo, Fernando Chito, Valentín Andarías, Francisco López.

RF Output Power

Limits

1. LTE Cat-4 Band 8. FCC §27.1507 (a) & (d).

FCC §27.1507 (a) & (d):

(a) *Maximum ERP*. The power limits specified in this section are applicable to operations in areas more than 110 km (68.4 miles) from the U.S./Mexico border and 140 km (87 miles) from the U.S./Canada border.

(3) *Mobile, control and auxiliary test stations*. Mobile, control and auxiliary test stations must not exceed 10 watts ERP.

(4) *Portable stations*. Portable stations must not exceed 3 watts ERP.

(d) *PAR limit*. The peak-to-average ratio (PAR) of the transmission must not exceed 13 dB.

2. LTE Cat-4 Band 12. FCC §27.50 (c) (10) / RSS-130 Clause 4.6.

FCC §27.50 (c) (10):

Portable stations (hand-held devices) in the 600 MHz uplink band and the 698-746 MHz band, and fixed and mobile stations in the 600 MHz uplink band are limited to 3 watts ERP.

RSS-130 Clause 4.6:

4.6.1 General

The transmitter output power shall be measured in terms of average power. In addition, the peak-to-average power ratio (PAPR) of the transmitter shall not exceed 13 dB for more than 0.1% of the time and shall use a signal corresponding to the High PAPR during periods of continuous transmission.

4.6.3 Frequency bands 698-756 MHz and 777-787 MHz

The e.r.p. shall not exceed 30 watts for mobile equipment and outdoor fixed subscriber equipment. The e.r.p. shall not exceed 3 watts for portable equipment and indoor fixed subscriber equipment.

3. LTE Cat-4 Band 13. FCC §27.50 (b) (10) / RSS-130 Clause 4.6.

FCC §27.50 (b) (10):

Portable stations (hand-held devices) transmitting in the 746-757 MHz, 776-788 MHz, and 805-806 MHz bands are limited to 3 watts ERP.

RSS-130 Clause 4.6:

4.6.1 General

The transmitter output power shall be measured in terms of average power. In addition, the peak-to-average power ratio (PAPR) of the transmitter shall not exceed 13 dB for more than 0.1% of the time and shall use a signal corresponding to the High PAPR during periods of continuous transmission.

4.6.3 Frequency bands 698-756 MHz and 777-787 MHz

The e.r.p. shall not exceed 30 watts for mobile equipment and outdoor fixed subscriber equipment. The e.r.p. shall not exceed 3 watts for portable equipment and indoor fixed subscriber equipment.

4. LTE Cat-4 Band 66. FCC §27.50 (d) / RSS-139 5.5.

FCC §27.50 (d):

(4) Fixed, mobile, and portable (hand-held) stations operating in the 1710-1755 MHz band and mobile and portable stations operating in the 1695-1710 MHz and 1755-1780 MHz bands are limited to 1 watt EIRP. Fixed stations operating in the 1710-1755 MHz band are limited to a maximum antenna height of 10 meters above ground. Mobile and portable stations operating in these bands must employ a means for limiting power to the minimum necessary for successful communications.

(5) In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

RSS-139 5.5:

The maximum output power of the equipment shall comply with the limits specified below. In the tables, maximum power refers to the equivalent isotropically radiated power (e.i.r.p.) or total radiated power (TRP), measured in terms of average values.

The limits in this RSS are specified for the purpose of certification and may not apply to all deployment scenarios. Consult SRSP-513 and SRSP-519 for more details on the bands 2110-2180 MHz and 2180-2200 MHz respectively.

Table 3: Maximum power of equipment in the band 1710-1780 MHz	
Equipment type	Maximum power
Fixed station and base station	30 dBm e.i.r.p./channel bandwidth
Subscriber equipment	30 dBm e.i.r.p./channel bandwidth

In addition, the peak to average power ratio (PAPR) of the equipment shall not exceed 13 dB for more than 0.1% of the time, using a signal that corresponds to the highest PAPR during periods of continuous transmission.

Method

The conducted RF output power measurements were made at the RF output terminals of the EUT using the power meter of the Universal Radio Communication tester CMW500, selecting maximum transmission power of the EUT and different modes of modulation.

The peak-to-average power ratio (PAPR) is measured using an attenuator, power splitter and spectrum analyser with a Complementary Cumulative Distribution Function implemented.

The maximum equivalent isotropically radiated power (e.i.r.p.) is calculated by adding the declared maximum antenna gain (dBi).

The maximum effective radiated power e.r.p. is calculated from the maximum equivalent isotropically radiated power (e.i.r.p.) by subtracting 2.15 dB:

$$E.R.P. = E.I.R.P. - 2.15 \text{ dB}$$

Test Setup

1. CONDUCTED AVERAGE POWER:

2. PEAK-TO-AVERAGE POWER RATIO (PAPR) and Conducted Average power:

Results

1. CONDUCTED AVERAGE POWER:

LTE Cat-4 Band 8:

Frequency Stability

Limits

1. LTE Cat-4 Band 8.

* FCC §27.54: The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

* FCC § 2.1055:

(a) The frequency stability shall be measured with variation of ambient temperature as follows:

(1) From -30° to +50° centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section.

(b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.

(c) The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

(2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

(3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply voltage and at each extreme also shall be shown.

2. LTE Cat-4 Bands 12, 13.

* FCC §27.54: The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

* FCC § 2.1055:

(d) The frequency stability shall be measured with variation of ambient temperature as follows:

(1) From -30° to +50° centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section.

(e) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.

(f) The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

(2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

(3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply voltage and at each extreme also shall be shown.

* RSS-130, 4.5:

For equipment that is capable of transmitting numerous channels simultaneously for different applications (e.g. LTE and narrowband – Internet of Things (IoT)), the occupied bandwidth shall be the bandwidth representing the sum of the occupied bandwidths of these channels.

The frequency stability shall be sufficient to ensure that the occupied bandwidth remains within each frequency block range when tested at the temperature and supply voltage variations specified in RSS-Gen.

3. LTE Cat-4 Band 66.

* FCC §27.54: The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

* FCC § 2.1055:

(a) The frequency stability shall be measured with variation of ambient temperature as follows:

(1) From -30° to +50° centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section.

(b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.

(c) The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

(2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

(3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply voltage and at each extreme also shall be shown.

* RSS-139, 5.4:

The frequency stability shall be sufficient to ensure that the occupied bandwidth stays within the operating frequency block or frequency block group when tested to the temperature and supply voltage variations specified in RSS-Gen.

Method

The frequency tolerance measurements over temperature variations were made over the temperature range of -30°C to $+50^{\circ}\text{C}$. The EUT was placed inside a climatic chamber and the temperature was raised hourly in 10°C steps from -30°C up to $+50^{\circ}\text{C}$.

The supply voltage was varied between 85% and 115% of nominal voltage.

The EUT was set in "Radio Resource Control (RRC) mode" on the middle channel using the Universal Radio Communication tester R&S CMW500 and the maximum frequency error was measured using the built-in calibrated frequency meter.

The worst case LTE mode for conducted power was used for the test.

In order to check that the frequency stability is sufficient such that the fundamental emissions stay within the authorized bands of operation, a reference point is established at the applicable unwanted emissions limit using a RBW equal to the RBW required by the unwanted emissions specification of the applicable regulatory standard. These reference points measured using the lowest and highest channel of operation are identified as fL and fH respectively. The worst-case frequency offset determined in the above methods is added or subtracted from the values of fL and fH to check that the resulting frequencies remain within the band.

The reference point measurements were made at the RF output terminals of the EUT using an attenuator, power splitter and spectrum analyser. The EUT was controlled via the Universal Radio Communication tester R&S CMW500 selecting maximum transmission power of the EUT and different modes of modulation.

Test Setup

Frequency tolerance:

Reference points f_L and f_H :

2. REFERENCE FREQUENCY POINTS f_L AND f_H :

The worst-case frequency offsets added or subtracted per band and bandwidth:

LTE Cat-4 Band 8: BW=1.4 MHz. QPSK.

f_L (MHz)	897.5476
f_H (MHz)	900.4394

LTE Cat-4 Band 12: BW=5 MHz. QPSK.

f_L (MHz)	699.0138
f_H (MHz)	715.9826

LTE Cat-4 Band 13: BW=5 MHz. QPSK.

f_L (MHz)	777.0784
f_H (MHz)	786.9145

LTE Cat-4 Band 66: BW=5 MHz. QPSK.

f_L (MHz)	1710.0754
f_H (MHz)	1779.9267

The reference frequency points f_L and f_H stay within the authorized blocks for the band above.

Measurement uncertainty (Hz): $< \pm 207.77$

Verdict

PASS

Modulation Characteristics

Limits

1. LTE Cat-4 Band 8.

* FCC §2.1047 Measurements required: Modulation characteristics.

2. LTE Cat-4 Bands 12, 13.

* FCC §2.1047 Measurements required: Modulation characteristics.

* RSS-130 4.2: Equipment certified under this standard shall employ digital modulation.

3. LTE Cat-4 Band 66.

* FCC §2.1047 Measurements required: Modulation characteristics.

* RSS-139 5.3: Devices may use any type of modulation technique. The type of modulation shall be documented in the test report.

Method

For LTE the EUT operates with QPSK and 16QAM modulation modes in which the information is digitised and coded into a bit stream. The RF transmission is multiplexed using *Orthogonal Frequency Division Multiplexing (OFDM)* using different possible arrangement of subcarriers (Resource Blocks RB).

Test Setup

Results

The following plots show the modulation schemes in the EUT.

LTE Cat-4 Band 8:

QPSK. BW=1.4 MHz.

16QAM. BW=1.4 MHz.

LTE Cat-4 Band 12:

QPSK. BW=1.4 MHz.

16QAM. BW=1.4 MHz.

LTE Cat-4 Band 13:

QPSK. BW=5 MHz.

16QAM. BW=5 MHz.

LTE Cat-4 Band 66:

QPSK. BW=1.4 MHz.

16QAM. BW=1.4 MHz.

Occupied Bandwidth

Limits

1. LTE Cat-4 Band 8.

* FCC §2.1049: Measurements required: Occupied bandwidth.

2. LTE Cat-4 Bands 12, 13, 66.

* FCC §2.1049: Measurements required: Occupied bandwidth.

* RSS-Gen 6.7: Occupied bandwidth (or 99% emission bandwidth).

Method

The occupied bandwidth measurement was performed at the output terminals of the EUT using an attenuator, power splitter and spectrum analyser. The EUT was controlled via the Universal Radio Communication tester R&S CMW500 selecting maximum transmission power of the EUT and different modes of modulation. The 99% occupied bandwidth and the -26 dBc bandwidth were measured directly using the built-in bandwidth measuring option of spectrum analyser.

Test Setup

Results

The worst case of occupied bandwidth corresponds to Resource Blocks (RB) Size All regardless the Bandwidth selected.

LTE Cat-4 Band 8:

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	4.573	4.570	4.567
-26 dBc Bandwidth (MHz)	5.987	5.934	5.938
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=5 MHz. 16QAM. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	4.558	4.580	4.575
-26 dBc Bandwidth (MHz)	5.913	6.016	5.972
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=10 MHz. QPSK. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	9.162	9.042	9.076
-26 dBc Bandwidth (MHz)	11.791	11.471	11.487
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=10 MHz. 16QAM. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	9.198	9.048	9.048
-26 dBc Bandwidth (MHz)	11.699	11.437	11.393
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=15 MHz. QPSK. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	13.575	13.614	13.5800
-26 dBc Bandwidth (MHz)	16.573	16.477	16.4424
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=15 MHz. 16QAM. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	13.581	13.614	13.587
-26 dBc Bandwidth (MHz)	16.653	16.606	16.469
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=20 MHz. QPSK. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	17.9790	18.004	17.9670
-26 dBc Bandwidth (MHz)	20.6850	20.581	20.5379
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 66. BW=20 MHz. 16QAM. RB Size=All.

Channel	Low	Middle	High
99% Occupied Bandwidth (MHz)	18.020	18.004	17.988
-26 dBc Bandwidth (MHz)	20.517	20.584	20.508
Measurement uncertainty (kHz)	<±3.75		

LTE Cat-4 Band 8. BW=1.4 MHz. QPSK. RB Size=All.

Low Channel:

High Channel:

LTE Cat-4 Band 8. BW=1.4 MHz. 16QAM. RB Size=All.

Low Channel:

High Channel:

LTE Cat-4 Band 8. BW=3 MHz. QPSK. RB Size=All.

Middle Channel:

LTE Cat-4 Band 8. BW=3 MHz. 16QAM. RB Size=All.

Middle Channel:

LTE Cat-4 Band 12. BW=1.4 MHz. QPSK. RB Size=All.

Low Channel:

Middle Channel:

High Channel:

LTE Cat-4 Band 12. BW=1.4 MHz. 16QAM. RB Size=All.

Low Channel:

Middle Channel:

High Channel:

LTE Cat-4 Band 12. BW=3 MHz. QPSK. RB Size=All.

Low Channel:

Middle Channel:

High Channel:

LTE Cat-4 Band 12. BW=3 MHz. 16QAM. RB Size=All.

Low Channel:

Middle Channel:

High Channel:

LTE Cat-4 Band 12. BW=5 MHz. QPSK. RB Size=All.

Low Channel:

Middle Channel:

High Channel:

LTE Cat-4 Band 12. BW=5 MHz. 16QAM. RB Size=All.
