

Certification Test Report

FCC ID: 2AAHS-ASRC

IC: 4397C-ASRC

FCC Rule Part: 15.249

IC Radio Standards Specification: RSS-210

ACS Report Number: 14-0462.W06.1A

Manufacturer: Johnson Outdoors Marine Electronics

Model: ASRC

Test Begin Date: November 18, 2014

Test End Date: November 25, 2014

Report Issue Date: January 28, 2015

FOR THE SCOPE OF ACCREDITATION UNDER LAB Code 200612-0

This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

1 GENERAL

1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart C of the FCC's Code of Federal Regulations and Industry Canada's Radio Standards Specification RSS-210 for Certification for Limited Modular Approval.

1.2 Product description

The ASRC is a small, custom-built Low Energy Bluetooth Module PCBA which will be placed inside a hand-held, coin cell battery remote control (transmitter) as well as a "dongle" (receiver) that attaches to and is powered from the Humminbird control head Accessory/GPS port located on the back of the ASRC.

Technical Information:

Detail	Description
Frequency Range	2402 -2480 MHz
Number of Channels	40
Modulation Format	GFSK
Operating Voltage	3.6V
Antenna Type / Gain	PIFA / -1.87dBi

Manufacturer Information:

Johnson Outdoors Marine Electronics
1220 Old Alpharetta Rd
STE 340
Alpharetta, GA 30005

EUT MAC Address Numbers: 90:59:AF:16:16:42 (Dongle), 90:59:AF:16:0F:BB (Remote Control)

Test Sample Condition: The test samples were provided in good working order with no visible defects.

1.3 Test Methodology and Considerations

The EUT is a limited module and therefore was tested as integrated into all applicable hosts. The host devices are identified as a dongle and remote control used in conjunction with other Johnson Outdoors Marine Electronics, Inc. products.

Preliminary measurements were collected for the EUT integrated hosts set in three orthogonal orientations. The measurements reported herein correspond to the worst case orientation with respect to the emission limit.

2 TEST FACILITIES

2.1 Location

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions
5015 B.U. Bowman Drive
Buford, GA 30518
Phone: (770) 831-8048
Fax: (770) 831-8598

2.2 Laboratory Accreditations/Recognitions/Certifications

ACS is accredited to ISO/IEC 17025 by the National Institute of Standards and Technology under their National Voluntary Laboratory Accreditation Program (NVLAP), Lab Code 200612-0. Unless otherwise specified, all tests methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

The Semi-Anechoic Chamber Test Site, Open Area Test Site (OATS) and Conducted Emissions Site have been fully described, submitted to, and accepted by the FCC, Industry Canada and the Japanese Voluntary Control Council for Interference by information technology equipment.

FCC Registration Number: 511277
Industry Canada Lab Code: IC 4175A
VCCI Member Number: 1831

- VCCI OATS Registration Number R-1526
- VCCI Conducted Emissions Site Registration Number: C-1608

2.3 Radiated Emissions Test Site Description

2.3.1 Semi-Anechoic Chamber Test Site

The Semi-Anechoic Chamber Test Site consists of a 20' x 30' x 18' shielded enclosure. The chamber is lined with Toyo Ferrite Grid Absorber, model number FFG-1000. The ferrite tile grid is 101 x 101 x 19mm thick and weighs approximately 550 grams. These tiles are mounted on steel panels and installed directly on the inner walls of the chamber.

The turntable is 150cm in diameter and is located 160cm from the back wall of the chamber. The chamber is grounded via 1 - 8' copper ground rod, installed at the center of the back wall, it is bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is all steel, flush mounted table installed in an all steel frame. The table is remotely operated from inside the control room located 25' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Behind the turntable is a 3' x 6' x 4' deep shielded pit used for support equipment if necessary. The pit is equipped with 1 - 4" PVC chases from the turntable to the pit that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit.

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3-1 below:

Figure 2.3-1: Semi-Anechoic Chamber Test Site

2.3.2 Open Area Tests Site (OATS)

The open area test site consists of a 40' x 66' concrete pad covered with a perforated electro-plated galvanized sheet metal. The perforations in the sheet metal are 1/8" holes that are staggered every 3/16". The individual sheets are placed to overlap each other by 1/4" and are riveted together to provide a continuous seam. Rivets are spaced every 3" in a 3 x 20 meter perimeter around the antenna mast and EUT area. Rivets in the remaining area are spaced as necessary to properly secure the ground plane and maintain the electrical continuity.

The entire ground plane extends 12' beyond the turntable edge and 16' beyond the antenna mast when set to a 10 meter measurement distance. The ground plane is grounded via 4 - 8' copper ground rods, each installed at a corner of the ground plane and bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is an all aluminum 10' flush mounted table installed in an all aluminum frame. The table is remotely operated from inside the control room located 40' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Adjacent to the turntable is a 7' x 7' square and 4' deep concrete pit used for support equipment if necessary. The pit is equipped with 5 - 4" PVC chases from the pit to the control room that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit. The pit is covered with 2 sheets of 1/4" diamond style re-enforced steel sheets. The sheets are painted to match the perforated steel ground plane; however the underside edges have been masked off to maintain the electrical continuity of the ground plane. All reflecting objects are located outside of the ellipse defined in ANSI C63.4.

A diagram of the Open Area Test Site is shown in Figure 2.3-2 below:

Figure 2.3-2: Open Area Test Site

2.4 Conducted Emissions Test Site Description

The AC mains conducted EMI site is located in the main EMC lab. It consists of an 8' x 8' solid aluminum horizontal ground reference plane (GRP) bonded every 3" to an 8' X 8' vertical ground plane.

The site is of sufficient size to test table top and floor standing equipment in accordance with section 6.1.4 of ANSI C63.4.

A diagram of the room is shown below in figure 4.1.3-1:

Figure 2.4-1: AC Mains Conducted EMI Site

6 EQUIPMENT UNDER TEST SETUP BLOCK DIAGRAM

Figure 6-1: Test Setup Block Diagram

7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

7.1 Antenna Requirement – FCC 15.203

The EUT utilizes a PIFA antenna with -1.87 dBi gain which cannot be removed without permanently damaging the device thus satisfying Part 15.203.

7.2 Power Line Conducted Emissions – FCC 15.207; IC RSS-Gen 8.8

7.2.1 Measurement Procedure

The EUT is a battery operated device with no provisions for connection to the AC mains; therefore AC power line conducted emissions is not applicable.

7.3 20dB / 99% Bandwidth – FCC 15.215; IC RSS-Gen 6.6

7.3.1 Measurement Procedure

The span of the spectrum analyzer display was set between two times and five times the occupied bandwidth (OBW) of the emission. The RBW of the spectrum analyzer was set to approximately 1 % to 5 % of the OBW. The trace was set to max hold with a peak detector active. The Delta function of the analyzer was utilized to determine the 20 dB bandwidth of the emission.

The occupied bandwidth measurement function of the spectrum analyzer was used to measure the 99% bandwidth. The span of the analyzer was set to capture all products of the modulation process, including the emission sidebands. The resolution bandwidth was set to 1% to 5% of the occupied bandwidth. The video bandwidth was set to 3 times the resolution bandwidth. A sampling detector was used.

7.3.2 Measurement Results

Results are shown below in Table 7.3.2-1 and Figures 7.3.2-1 to 7.3.2-6.

Table 7.3.2-1: 20dB / 99% Bandwidth

Frequency (MHz)	20dB Bandwidth (MHz)	99% Bandwidth (MHz)
2402	1.203	1.102
2440	1.215	1.087
2480	1.221	1.070

Figure 7.3.2-4: 99% BW Low Channel

Figure 7.3.2-5: 99% BW Mid Channel

Figure 7.3.2-6: 99% BW High Channel

7.4 Fundamental Field Strength – FCC 15.249(a); IC RSS-210 A2.9(a)**7.4.1 Measurement Procedure**

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. Peak and average measurements were made with RBW and VBW of 3 MHz and 10 MHz respectively. (RBW >> EBW)

7.4.2 Measurement Results

Results are shown below in Tables 7.4.2-1 to 7.4.2-2.

Table 7.4.2-1: Fundamental Field Strength – Dongle Host

Frequency (MHz)	Level (dBuV)		Antenna Polarity (H/V)	Correction Factors (dB)	Corrected Level (dBuV/m)		Limit (dBuV/m)		Margin (dB)

7.5 Radiated Spurious Emissions – FCC 15.249(a)(d)(e); IC RSS-210 A2.9(a)(b)

7.5.1 Measurement Procedure

Radiated emissions tests were made over the frequency range of 30MHz to 10 GHz, > 10 times the highest fundamental frequency.

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. For frequencies below 1000MHz, quasi-peak measurements were made using a resolution bandwidth RBW of 120 kHz and a video bandwidth VBW of 300 kHz. For frequencies above 1000MHz, peak and average measurements were made with RBW and VBW of 1 MHz and 3MHz respectively.

All out of band emissions were evaluated, including any emissions at or near the band-edge.

7.5.2 Measurement Results

Radiated spurious emissions are reported in the tables 7.5.2-1 to 7.5.2-2 below.

Table 7.5.2-1: Radiated Spurious Emissions – Dongle Host

Frequency (MHz)	Level (dBuV)		Antenna Polarity (H/V)	Correction Factors (dB)	Corrected Level (dBuV/m)		Limit (dBuV/m)		Margin (dB)	
	pk	Qpk/Avg			pk	Qpk/Avg	pk	Qpk/Avg	pk	Qpk/Avg
2402 MHz (Low Channel)										
2400	57.41	49.56	H	-6.43	50.98	43.13	74.0	54.0	23.0	10.9

4804	47.02	37.34	V	1.62	48.64	38.96	74.0	54.0	25.4	15.0
2440 MHz (Middle Channel)										
No emissions detected above the noise floor of the measurement system										
2480 MHz (High Channel)										
2485	49.29	38.46	H	-5.96	43.33	32.50	74.0	54.0	30.7	21.5
2485	53.19	44.38	V	-5.96	47.23	38.42	74.0	54.0	26.8	15.6
4960	48.52	37.19	V	1.92	50.44	39.11	74.0	54.0	23.6	14.9

Table 7.5.2-2: Radiated Spurious Emissions – Remote Host

Frequency (MHz)	Level (dBuV)		Antenna Polarity (H/V)	Correction Factors (dB)	Corrected Level (dBuV/m)		Limit (dBuV/m)		Margin (dB)	
	pk	Qpk/Avg			pk	Qpk/Avg	pk	Qpk/Avg	pk	Qpk/Avg
2402 MHz (Low Channel)										
2400	54.07	45.49	H	-6.43	47.64	39.06	74.0	54.0	26.4	14.9
2400	64.46	56.62	V	-6.43	58.03	50.19	74.0	54.0	16.0	3.8
4805	47.35	39.76	H	1.62	48.97	41.38	74.0	54.0	25.0	12.6
4805	48.06	40.49	V	1.62	49.68	42.11	74.0	54.0	24.3	11.9
2440 MHz (Middle Channel)										
4880	45.46	38.84	H	1.77	47.23	40.61	74.0	54.0	26.8	13.4
4880	48.25	43.28	V	1.77	50.02	45.05	74.0	54.0	24.0	9.0
2480 MHz (High Channel)										
2483.5	50.92	44.22	V	-5.97	44.95	38.25	74.0	54.0	29.1	15.8
4960	46.22	36.86	H	1.92	48.14	38.78	74.0	54.0	25.9	15.2
4960	46.98	41.07	V	1.92	48.90	42.99	74.0	54.0	25.1	11.0

7.5.3 Sample Calculation:

$$R_C = R_U + CF_T$$

Where:

CF_T	=	Total Correction Factor (AF+CA+AG)-DC (Average Measurements Only)
R_U	=	Uncorrected Reading
R_C	=	Corrected Level
AF	=	Antenna Factor
CA	=	Cable Attenuation
AG	=	Amplifier Gain
DC	=	Duty Cycle Correction Factor

Example Calculation: Peak

Corrected Level: $57.41 - 6.43 = 50.98\text{dBuV}$

Margin: $74\text{dBuV} - 50.98\text{dBuV} = 23.0\text{dB}$

Example Calculation: Average

Corrected Level: $49.56 - 6.43 - 0 = 43.13\text{dBuV}$

Margin: $54\text{dBuV} - 43.13\text{dBuV} = 10.9\text{dB}$

8 CONCLUSION

In the opinion of ACS, Inc. the ASRC, manufactured by Johnson Outdoors Marine Electronics meets the requirements of FCC Part 15 subpart C and Industry Canada's Radio Standards Specification RSS-210.

END REPORT
