

TEST REPORT

Report No. : HST201606-2803-FCC

Product description: WIRELESS HANDHELD
TRANSMITTER

Model/Type : HH500

Applicant's name: PROFORA INTERNATIONAL
CORPORATION

TEST REPORT FCC Part 74.861e: 2015 FCCID: 2AAQCHH500		
Report Reference No.: HST201606-2803-FCC		
Tested by (+ signature)		Lemon Fu
Review by (+ signature)		Sandy Yu
Approved by (+ signature)		Robin Peng
Date of Sample Receive Jun. 1, 2016		
Date of Test Jun. 1, 2016 to Jun. 13, 2016		
Date of issue Jun. 15, 2016		
Total number of pages 31 Pages		
Testing Laboratory Guangdong Environment Radiation Monitoring Center (Accredited by CNAS, Accredited Number: L5539) FCC- Registration No: 667318 Renewal on Sep. 12, 2012		
Address No. 860, South Guangzhou Avenue, Guangzhou, 510300 China		
Applicant's name PROFORA INTERNATIONAL CORPORATION		
Address 719 LAMBS CREEK ROAD P.O. BOX 99 MANSFIELD PA 16933 USA		
Manufacturer's name XINYINGKE ELECTROACOUSTIC TECHNOLOGY CO., LTD.		
Address C3, AREA2, ENPING, GUANGDONG, CHINA		
Test specification Entrusted testing		
Standard FCC Part 74.861e: 2015		
Non-standard test method N/A		
Test item description WIRELESS HANDHELD TRANSMITTER		
Trade Mark PENDOMAX		
Model/Type reference HH500		
Ratings 3.0Vdc by two AA Batteries

1 TEST SUMMARY

Test	Test Requirement	Standard Paragraph	Result
Carrier Radiated Power	FCC Part 2.1046	74.861 e) 1) 54–72, 76–88 & 174–216 MHz bands, 50 mW 470–608 and 614–806 MHz bands, 250 mW	PASS
Modulation Deviation	FCC Part 2.1047	74.861 e) 3) Within 75kHz	PASS
Frequency Stability	FCC Part 2.1055	74.861 e) 4) <0.005% 50 ppm	PASS
Operating Bandwidth	FCC Part 2.1049 c)	74.861 e) 5) Within 200kHz	PASS
Unwanted Radiation	FCC Part 2.1049 c)	74.861 e) 6) within the mask	PASS
Radiated Spurious Emission	FCC Part 2.1053	74.861 d) 3) < 43+10lgP(W) dB	PASS

Remark:

♣The EUT has one channel, which is located in the range 516.000 MHz to 541.000MHz.

Only test result of sample of in channels 516.0 MHz, 499.7 MHz and 541.0 MHz were recorded in this report.

2.6 Test Location

Guangdong Environment Radiation Monitoring Center

Address: No. 860, South Guangzhou Avenue, Guangzhou, 510300 China

Accredited by CNAS, Accredited Number: L5539

FCC- Registration No: 667318 Renewal on Sep. 12, 2012

2.7 Deviation from Standards

None.

2.8 Abnormalities from Standard Conditions

None.

3 TEST RESULTS

3.1 E.U.T. Operation Condition

Operating Environment:

Temperature: 20.0 °C~25 °C

Humidity: 50 ~70% RH

Atmospheric Pressure: 980~1012 mbar

EUT Operation: Test the EUT in transmitting mode.

Performed Carrier Radiated Power & Radiated Spurious Emissions testing in highest/ middle / lowest frequency spots within the range, and performed Occupied Bandwidth, Frequency Stability & Modulation Characteristics in middle frequency spot.

3.2 Test Procedure & Measurement Data

3.2.1 Carrier Radiated Power & Radiated Spurious Emissions

Test Requirement: FCC CFR 47 Part 74.861 e) 1) & d) 3)

Test Method: EIA/TIA 603-D:2010 section 2.2,
FCC CFR 47 Part 2.1047 & 1053

Measurement Distance: 3m (Semi-Anechoic Chamber)

Test Requirement:

(d) For low power auxiliary stations operating in the bands other than those allocated for TV broadcasting, the following technical requirements are imposed.

(3) The occupied bandwidth shall not be greater than that necessary for satisfactory transmission and, in any event, an emission appearing on any discrete frequency outside the authorized band shall be attenuated, at least, $43 + 10 \log^{10}$ (mean output power, in watts) dB below the mean output power of the transmitting unit.

(e) For low power auxiliary stations operating in the bands allocated for TV broadcasting, the following technical requirements apply:

(1) The power of the measured unmodulated carrier power at the output of the transmitter power amplifier (antenna input power) may not exceed the following:

(i) 54–72, 76–88, and 174–216 MHz bands—50 mW

(ii) 470–608 and 614–806 MHz bands—250 mW

Test Procedure:

The procedure used was EIA/TIA 603-D:2010. The receiver was scanned from the lowest radio frequency generated in the equipment to the tenth harmonic of the carrier. When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes.

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading + Antenna Factor + Cable Factor – Preamplifier Factor

An initial pre-scan was performed in the 3m chamber using the spectrum analyzer in peak detection mode. Quasi-peak measurements were conducted based on the peak sweep graph. The EUT was measured by Bilog antenna with 2 orthogonal polarities

Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the Carrier Radiated Power and spurious emissions were measured by the substitution.

Conducted output power:

Remove the antenna from the EUT and then connect a low attenuation RF cable from the antenna port to the spectrum.

Set the spectrum analyzer: RBW = 300 kHz. VBW $\geq$ RBW. Span=2MHz, Sweep = auto; Detector Function = Peak (Max. hold).

Test Result:

Carrier Frequency (MHz)	Factual Level dBm (mW)	conducted output power dBm (mW)	Limit in 74.861 e) 1)
516.000	-6.2dBm(i.e.0.24 mW)	-6.3dBm(i.e.0.23 mW)	24 dBm (i.e. 250 mW)
521.600	-6.4dBm(i.e.0.23 mW)	-6.5dBm(i.e.0.22 mW)	24 dBm (i.e. 250 mW)
541.000	-6.4dBm(i.e. 0.23 mW)	-6.5dBm(i.e. 0.22 mW)	24 dBm (i.e. 250 mW)

The Factual Level is ERP value.

Radiated spurious emissions:

4869.000	<-43	NA	<-43	NA	-13
5410.000	<-43	NA	<-43	NA	-13

The Factual Level is ERP value.

The peak emission of other frequency in rang from 30MHz up to 10 times carrier were 25dB lower than the limit, hence no data was recorded in the report.

NA: Not applicable, since the level is over 30dB lower than the limit.

TEST RESULTS: The unit does meet the FCC requirements.

3.2.2 Occupied Bandwidth

Test Requirement: FCC CFR 47 Part 74.e) 5) & 6)

Test Method: FCC CFR 47 Part 2.1049 f) 2)

Requirements:

(e) For low power auxiliary stations operating in the bands allocated for TV broadcasting, the following technical requirements apply:

(5) The operating bandwidth shall not exceed 200 kHz.

(6) The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the following schedule:

(i) On any frequency removed from the operating frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: at least 25dB;

(ii) On any frequency removed from the operating frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: at least 35dB;

(iii) On any frequency removed from the operating frequency by more than 250 percent of the authorized bandwidth: at least $43 + 10 \log_{10}$ (mean output power in watts) dB.

Test Procedure

Setup

Input 2500Hz signal to the microphone, find the 50% rated deviation, add the level 16dB, test this status the 99% occupied bandwidth and record it.

Test Result: The graph as below, represents the emissions take for this device.

Occupied Bandwidth (99% of total power): 118.0 kHz.

Date: 7.JUN.2016 06:07:52

Emission Mask: input with 6 kHz AF, 50% modulation + 16dB. OBWmax=156 kHz

Date: 7.JUN.2016 06:10:20

Emission Mask: input with 10 kHz AF, 50% modulation + 16dB. OBW=124 kHz

Date: 7.JUN.2016 06:07:21

Emission Mask: input with 15 kHz AF, 50% modulation + 16dB. OBW=96 kHz

Date: 7.JUN.2016 06:06:51

Emission Mask: input with 20 kHz AF, 50% modulation + 16dB. OBW=82 kHz

Date: 7.JUN.2016 06:06:15

Test results: The unit does meet the FCC requirements.

3.2.3 Frequency Stability

Test Requirement: FCC CFR 47 Part 74.e) 4)

Test Method: FCC CFR 47 Part 2.1055

Requirements: +/-50 ppm

(e) For low power auxiliary stations operating in the bands allocated for TV broadcasting, the following technical requirements apply:

(4) The frequency tolerance of the transmitter shall be 0.005 percent.

Test Procedure:

Frequency stability versus Environmental Temperature

The equipment under test was connected to an external DC power supply and the RF output was connected to a frequency counter via feed through attenuators. The EUT was placed inside the temperature chamber. After the temperature stabilized for approximately 20 minutes, the frequency of the output signal was recorded from the counter.

Frequency Stability versus Input Voltage

At room temperature ($25 \pm 5^{\circ}\text{C}$), an external variable DC power supply was connected to the EUT. The frequency of the transmitter was measured for 115%, 100% and 85% of the nominal operating input voltage. For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

Test Result:

Assigned Frequency: 516.0 MHz/ 521.6 MHz/ 541.0 MHz				
Environment Temperature (°C)	Power Supplied (Vdc)	Frequency Measure with Time Elapsed Total emission within		
		+/-25.8kHz	+/-26.1kHz	+/-27.05kHz
50	3.0	-7.7	-6.3	-7.2
40	3.0	9.2	8.4	8.7
30	3.0	10.3	8.9	8.8
20	3.0	-6.4	-8.8	-7.3
10	3.0	-7.3	-4.7	-6.2
0	3.0	15.5	12.5	13.3
-10	3.0	-7.2	-8.7	-7.2
-20	3.0	-20.2	-15.2	-15.2
-30	3.0	-15.4	-17.1	-17.4
Environment Temperature (°C)	Power Supplied (Vdc)	Frequency Measure with Time Elapsed Total emission within		
		+/-25.8kHz	+/-26.1kHz	+/-27.05kHz
25	3.0	-13.2	-9.2	-6.2
25	2.8	0.4	0.2	0.5
25	2.6	1.5	1.5	4.0
25	2.5	-3.8	-4.9	-4.9

The EUT end point: 2.5Vdc

The results: The unit does meet the FCC requirements.

3.2.4 Modulation Characteristics

Test Requirement: FCC CFR 47 Part 74.e) 3)

Test Method: FCC CFR 47 Part 2.1047

Requirements:

(e) For low power auxiliary stations operating in the bands allocated for TV broadcasting, the following technical requirements apply:

(3) Any form of modulation may be used. A maximum deviation of ± 75 kHz is permitted when frequency modulation is employed.

Test Procedure:

Audio Frequency Response

The RF output of the transceiver was connected to the input of FSP 30 with FM deviation module through sufficient attenuation so as not to overload the meter or distort the reading. An audio signal generator was connected to the audio input of microphone.

The audio signal input level was adjusted to obtain **20% of the maximum rated system deviation at 1 kHz**, and recorded as DEV_{REF} . With the audio signal generator level unchanged, set the generator frequency between 100 to 5000 Hz. The transmitter deviations (DEV_{FREQ}) were measured and the audio frequency response was calculated as $20\log_{10} [DEV_{FREQ} / DEV_{REF}]$

The plot(s) of Audio Frequency Response is presented hereinafter as reference.

0dB=10mV at 1kHz (20% of the maximum rated system deviation).

Modulation Limiting

- Adjust the transmitter per the manufacturer's procedure for full rated system deviation.
- Set the test receiver to measure peak positive deviation. Set the audio bandwidth for ≤ 0.25 Hz to $\geq 15,000$ Hz. Turn the de-emphasis function off.
- Apply a **1000 Hz** modulating signal to the transmitter from the audio frequency generator, and adjust the level to obtain **60% of full rated system deviation**.
- Increase the level from the audio frequency generator by 20 dB in one step (rise time between the 10% and 90% points shall be 0.1 second maximum).
- Measure both the instantaneous and steady-state deviation at and after the time of increasing the audio input level.
- With the level from the audio frequency generator held constant at the level obtained in step e), slowly vary the audio frequency from 100 to 5000 Hz and observe the steady-state deviation. Record the maximum deviation.

Test at five different modulating frequencies (100Hz, 300Hz, 500Hz, 1KHz, 2.5kHz, 5kHz), the output level of the audio generator was varied up to 1V and the FM deviation level was recorded.

Positive peak deviation

3.3 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2

Measurement		Frequency	Uncertainty
Conducted Emission	by LISN	150kHz-108MHz	2.8dB
	by AC probe	150kHz-108MHz	2.8dB
Radiated Emission	ALSE method	0.15MHz-30MHz	4.3dB
	Horizontal	30M-300MHz	4.2dB
	Horizontal	300M-1GHz	4.2dB
	Horizontal	1G-18GHz	4.3dB
	Vertical	30M-300MHz	4.3dB
	Vertical	300M-1GHz	4.3dB
	Vertical	1G-18GHz	4.4dB
Temperature		-30°C-50°C	±0.5°C
Humidity		30%-75%	±2%

The reported uncertainty of measurement $y \pm U$, where expanded uncertainty U is based on a standard uncertainty multiplied by a coverage factor of $k=2$, providing a level of confidence of approximately 95 %.
