

MEERA INTERNATIONAL LIMITED

7.85inch Tablet PC

Main Model: MT-785 IPS
Serial Model: NTB-785 IPS

March 20, 2014
Report No.: 14020106-FCC-H1
(This report supersedes none)

Modifications made to the product : None

This Test Report is Issued Under the Authority of:

		
Amos Xia Compliance Engineer	Alex Liu Technical Manager	

This test report may be reproduced in full only.
Test result presented in this test report is applicable to the representative sample only.

RF Exposure Evaluation Report
To: §15.247 (i), §2.1093

SIEMIC, INC.
Accessing global markets

Laboratory Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to [testing](#) and [certification](#), SIEMIC provides initial design reviews and [compliance management](#) through out a project. Our extensive experience with [China](#), [Asia Pacific](#), [North America](#), [European](#), and [international](#) compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the [global markets](#).

Accreditations for Conformity Assessment

Country/Region	Scope
USA	EMC , RF/Wireless , Telecom
Canada	EMC, RF/Wireless , Telecom
Taiwan	EMC, RF, Telecom , Safety
Hong Kong	RF/Wireless ,Telecom
Australia	EMC, RF, Telecom , Safety
Korea	EMI, EMS, RF , Telecom, Safety
Japan	EMI, RF/Wireless, Telecom
Singapore	EMC , RF , Telecom
Europe	EMC, RF, Telecom , Safety

1 EXECUTIVE SUMMARY & EUT INFORMATION

The purpose of this test programme was to demonstrate compliance of the MEERA INTERNATIONAL LIMITED, 7.85inch Tablet PC and model: MT-785 IPS against the current Stipulated Standards. The 7.85inch Tablet PC has demonstrated compliance with the §15.247 (i), §2.1093.

EUT Information

EUT Description	7.85inch Tablet PC
Main Model	MT-785 IPS
Serial Model	NTB-785 IPS
Antenna Gain	Bluetooth:0.39dBi WIFI: 0.42dBi
Input Power	Li-ion Battery: 3.7V 4000mAh POWER SUPPLY: Model: XHY050200UUCH Input: AC 100-240V 50/60Hz 0.5A MAX Output: DC 5.0V 2.0A
Classification Per Stipulated Test Standard	§15.247 (i), §2.1093

2 TECHNICAL DETAILS

Purpose	Compliance testing of 7.85inch Tablet PC with stipulated standard
Applicant / Client	MEERA INTERNATIONAL LIMITED 301 Kam On Building, 176A Queen's Road Central, Central, Hong Kong, China
Manufacturer	Shenzhen Beneworld Technology Co. Ltd. Building 3, Huangtian Industrial Park, Xixiang, Baoan District, Shenzhen, Guangdong, China
Laboratory performing the tests	SIEMIC (Nanjing-China) Laboratories NO.2-1,Longcang Dadao, Yuhua Economic Development Zone, Nanjing, China Tel: +86(25)86730128/86730129 Fax: +86(25)86730127 Email: China@siemic.com
Test report reference number	14020106-FCC-H1
Date EUT received	February 21, 2014
Standard applied	§15.247 (i), §2.1093
Dates of test (from – to)	March 10 to March 19, 2014
No of Units :	#1
Equipment Category :	Spread Spectrum System/Device
Trade Name :	N/A
RF Operating Frequency (ies)	802.11b/g/n: 2412-2462 MHz Bluetooth: 2402-2480 MHz
Number of Channels	Bluetooth: 79CH 802.11b/g/n: 11CH
Modulation	802.11b/g/n: CCK/OFDM Bluetooth: GFSK&$\pi/4$-DQPSK &8DPSK
Port	Earphone Port, HDMI Port, USB Port
FCC ID	2AASXMTNTB785IPS

3 MODIFICATION

NONE

4 TEST SUMMARY

The product was tested in accordance with the following specifications.
All testing has been performed according to below product classification:

Test Results Summary

FCC Rules	Description of Test	Result
§15.247 (i), §2.1093	RF Exposure	Compliance

5 MEASUREMENTS, EXAMINATION AND DERIVED RESULTS

5.1 §15.247 (i) and §2.1093/ – RF Exposure

Standard Requirement:

According to §15.247 (i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at *test separation distances* ≤ 50 mm are determined by:

$$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f_{\text{(GHz)}}}] \leq 3.0 \text{ for 1-g SAR and } \leq 7.5 \text{ for 10-g extremity SAR,}^{16} \text{ where}$$

- $f_{\text{(GHz)}}$ is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation¹⁷
- The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum *test separation distance* is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum *test separation distance* is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

Routine SAR evaluation refers to that specifically required by § 2.1093, using measurements or computer simulation. When routine SAR evaluation is not required, portable transmitters with output power greater than the applicable low threshold require SAR evaluation to qualify for TCB approval.

BT Mode:

One antenna is available for the EUT (BT antenna). The minimum separation distances is 5 mm.

The maximum average output power(turn-up power) in low channel of BT is 8.53 dBm=7.13mW

The calculation results= $7.13/5 \cdot \sqrt{2.402} = 2.21 < 3$

The maximum average output power(turn-up power) in middle channel of BT is 8.79 dBm=7.57 mW

The calculation results= $7.57/5 \cdot \sqrt{2.441} = 2.37 < 3$

The maximum average output power(turn-up power) in high channel of BT is 8.82 dBm=7.62 mW

The calculation results= $7.62/5 \cdot \sqrt{2.480} = 2.40 < 3$

According to KDB 447498, no stand-alone required for BT antenna, and no simultaneous SAR measurement is required .

WIFI Mode:

One antenna is available for the EUT (WIFI antenna). The minimum separation distances is 5 mm.

The maximum average output power(turn-up power) in low channel of WIFI is 9.05 dBm=8.04 mW

The calculation results= $8.04/5 \cdot \sqrt{2.412} = 2.50 < 3$

The maximum average output power(turn-up power) in middle channel of WIFI is 9.13dBm=8.18 mW

The calculation results= $8.18/5 \cdot \sqrt{2.437} = 2.55 < 3$

The maximum average output power(turn-up power) in high channel of WIFI is 9.09dBm=8.11 mW

The calculation results= $8.11/5 \cdot \sqrt{2.462} = 2.55 < 3$

According to KDB 447498, no stand-alone required for BT antenna, and no simultaneous SAR measurement is required .

Test Result: Pass
