RE: Application for Modular Approval for the VPR9XYLND module

Dear Sir or Madam:

The following information addresses requirements to support a modular approval as required by FCC Part 15.212, Modular Transmitter

1. The wireless transmitter section is shielded. Testing has been performed to assure compliance.
2. The VPR9XYLND does not have external modulation or data inputs. The RF Section is driven by an onboard MCU which controls RF data lines and does not allow excessive modulation.
3. The modular transmitter has its own power regulation.
4. The wireless transmitter has an antenna that is permanently imbedded into the module circuit board.
5. The module has been tested for compliance with the standards in a stand-alone configuration (not inside another product but on its own).
6. The VPR9XYLND register module will be labeled as required. The host will also have the required labeling.
7. Operating requirements are included in the host technical manual.
8. MPE measurements are provided to demonstrate RF compliance. There is a cautionary statement that is included in technical manual stipulating the 20cm separation distance.

Sincerely,

Alex Irkliy

Co-CEO
