1. ATTESTATION OF TEST RESULTS

COMPANY NAME: Metric Systems
3055 Enterprise Ct.
Vista, CA 92081

EUT DESCRIPTION: TVWS Fixed Wireless Networking Radio System

MODEL: RaptorXR

SERIAL NUMBER: XR001 (UHF); XR002 (UHF); XR007 (VHF)

DATE TESTED: May 3rd, 2017 – May 10th 2017

APPLICABLE STANDARDS	
STANDARD	TEST RESULTS
FCC PART 15 SUBPART H	Pass

UL Verification Services Inc. tested the above equipment in accordance with the requirements set forth in the above standards. All indications of Pass/Fail in this report are opinions expressed by UL Verification Services Inc. based on interpretations and/or observations of test results. Measurement Uncertainties were not taken into account and are published for informational purposes only. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

Note: The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, any agency of the Federal Government, or any agency of the U.S. government.

Approved & Released For

Lab Engineer
UL Verification Services Inc.

2. SCOPE

This report documents the results of RF, emissions and database tests. This report will demonstrate compliance to the applicable rules in Part 15 Subpart H – White Space Devices.

3. TEST METHODOLOGY

The tests documented in this report were performed in accordance with FCC CFR 47 Part 15 Subpart H, KDB 416721 D01 v03, and ANSI C63.10-2013.

4. FACILITIES AND ACCREDITATION

The test sites and measurement facilities used to collect data are located at 47173 and 47266 Benicia Street, Fremont, California, USA. Line conducted emissions are measured only at the 47173 address. The following table identifies which facilities were utilized for radiated emission measurements documented in this report. Specific facilities are also identified in the test results sections.

47173 Benicia Street	47266 Benicia Street
☒ Chamber A	☐ Chamber D
☐ Chamber B	☐ Chamber E
☐ Chamber C	☐ Chamber F
	☐ Chamber G
	☐ Chamber H

The above test sites and facilities are covered under FCC Test Firm Registration # 208313.

UL Verification Services Inc. is accredited by NVLAP, Laboratory Code 200065-0.

5. CALIBRATION AND UNCERTAINTY

5.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

5.2. SAMPLE CALCULATION

Where relevant, the following sample calculation is provided:

$$\begin{aligned} \text{Field Strength (dBuV/m)} &= \text{Measured Voltage (dBuV)} + \text{Antenna Factor (dB/m)} + \text{Cable} \\ &\text{Loss (dB)} - \text{Preamp Gain (dB)} \\ 36.5 \text{ dBuV} + 18.7 \text{ dB/m} + 0.6 \text{ dB} - 26.9 \text{ dB} &= 28.9 \text{ dBuV/m} \end{aligned}$$

5.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

Parameter	Uncertainty
Worst Case Conducted Disturbance, 9KHz to 0.15 MHz	3.84 dB
Worst Case Conducted Disturbance, 0.15 to 30 MHz	3.65 dB
Worst Case Radiated Disturbance, 9KHz to 30 MHz	3.15 dB
Worst Case Radiated Disturbance, 30 to 1000 MHz	5.36 dB
Worst Case Radiated Disturbance, 1000 to 18000 MHz	4.32 dB
Worst Case Radiated Disturbance, 18000 to 26000 MHz	4.45 dB
Worst Case Radiated Disturbance, 26000 to 40000 MHz	5.24 dB

Uncertainty figures are valid to a confidence level of 95%.

6. EQUIPMENT UNDER TEST

6.1. DESCRIPTION OF EUT

The EUT is a TV whitespace fixed wireless networking radio system. The EUT is a software-defined full-duplex broadband radio operating in the VHF and UHF bands.

6.2. MAXIMUM OUTPUT POWER

The transmitter has a maximum conducted output power as follows;

BAND	Frequency Range (MHz)	Output Power (dBm)	Output Power (mW)
UHF	470 -698	5.93	3.92
VHF	174 -216	6.83	4.82

The transmitter has a maximum E.I.R.P as follows;

BAND	Frequency Range (MHz)	Output Power (dBm)	Output Power (mW)
UHF	470 -698	12.08	16.14
VHF	174 -216	12.48	17.70

6.3. DESCRIPTION OF AVAILABLE ANTENNAS

The radio can be configured with the following antenna types, and highest gain for each type:

Type	Band	Antenna Spec. Gain	Attenuation	*Total Gain
TV Panel Antenna	VHF	9.65dBi	4dB	5.65 dBi
Log-Periodic	UHF	10.15dBi	4dB	6.15 dBi

*Please note 4dB of attenuation is added to the antenna spec to lower the total gain of the antenna

6.4. SOFTWARE AND FIRMWARE

The firmware installed in the EUT during testing was version 4.4.0.

6.5. WORST-CASE CONFIGURATION AND MODE

For below 30MHz radiated emissions and power line conducted emissions were performed with the EUT set to transmit at the channel with the highest power and worst-case data rate as worst-case scenario.

Preliminary baseline tests were performed to determine worst case data rate. The worst case data rate was determined to be QPSK.

All final radiated testing was performed with the EUT in the X (Flatbed) orientation.

6.6. DESCRIPTION OF TEST SETUP

SUPPORT EQUIPMENT

Support Equipment List			
Description	Manufacturer	Model	Serial Number
EUT AC Adapter	Cincon Eletrconics	TRH100A280	100280-000607
Laptop #1	Apple	MacBook Pro	2012
Router	Netgear	P030WF120B	3113062131020003T9

I/O CABLES

I/O CABLE LIST						
Cable No.	Port	No. of identical ports	Connector Type	Cable Type	Cable Length (m)	Remarks

8. MEASUREMENT METHODS

Output Power & Power Spectral Density (Fixed WSD): KDB 416721 D01 v03 Section II, (2)(c)(i).

Band-Edge Measurement: KDB 416721 D01 v03 Section II (2)(d)(i)

Adjacent Channel Emissions: KDB 416721 D01 v03 Section II (2)(d)(ii)

Beyond Adjacent Channel Emissions: ANSI C63.10, Section 6.5 and 6.6.

AC Power Line Conducted Emissions: ANSI C63.10-2013, Section 6.2.

9. ANTENNA PORT TEST RESULTS

9.1. OUTPUT POWER AND POWER SPECTRAL DENSITY

LIMITS

§15.709 (b)(1) Fixed White Space Device

For operation at EIRP levels of 36 dBm (4000 mW) or less, fixed white space devices may operate at EIRP levels between the values shown in the table provided that the conducted power and the conducted power spectral density (PSD) limits are linearly interpolated between the values shown and the adjacent channel emission limit of the higher value shown in the table is met. Operation at EIRP levels above 36 dBm (4000 mW) shall follow the requirements for 40 dBm (10,000 mW).

EIRP (6 MHz)	Conducted power limit ¹ (6 MHz)	Conducted PSD limit (100 kHz)	Conducted adjacent channel emission limit (100 kHz)
16 dBm (40 mW)	10 dBm (10 mW)	-7.4 dBm	-62.8 dBm
20 dBm (100 mW)	14 dBm (25 mW)	-3.4 dBm	-58.8 dBm
24 dBm (250 mW)	18 dBm (63 mW)	0.6 dBm	-54.8 dBm
28 dBm (625 mW)	22 dBm (158 mW)	4.6 dBm	-50.8 dBm
32 dBm (1600 mW)	26 dBm (400 mW)	8.6 dBm	-46.8 dBm
36 dBm (4000 mW)	30 dBm (1000 mW)	12.6 dBm	-42.8 dBm
40 dBm (10000 mW)	30 dBm (1000 mW)	12.6 dBm	-42.8 dBm

¹The conducted power spectral density from a fixed white space device shall not be greater than the values shown in the table when measured in any 100 kHz band during any time interval of continuous transmission, except that a 40 mW fixed white space device operating in a four megahertz channel within a seven megahertz guard band must comply with a conducted power spectral density limit of -5.4 dBm.

The conducted power, PSD and adjacent channel limits for fixed white space devices operating at up to 36 dBm (4000 milliwatts) EIRP shown in the table in paragraph (b)(1) of this section are based on a maximum transmitting antenna gain of 6 dBi. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

The conducted power, PSD and adjacent channel limits for fixed white space devices operating at greater than 36 dBm (4000 milliwatts) EIRP shown in the table in paragraph (b)(1) of this section are based on a maximum transmitting antenna gain of 10 dBi. If transmitting antennas of directional gain greater than 10 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 10 dBi.

DIRECTIONAL ANTENNA GAIN

There is only one transmitter output therefore the directional gain is equal to the antenna gain.

10. RADIATED EMISSIONS

BEYOND ADJACENT CHANNEL EMISSION LIMITS

FCC §15.709 (d) (2) At frequencies beyond the six megahertz channel immediately adjacent to each white space channel or group of contiguous white space channels in which the white space device is operating the white space device shall meet the requirements of §15.209.

The DUT must comply with radiated emission limits for a Class B digital device, except that authorization as a Class A device may be considered with appropriate justification for non-residential use.

§15.209 (a) Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency Range (MHz)	Field Strength Limit (uV/m) at 3 m	Measurement distance (meters)
0.009-0.490	2400/F(kHz)	300
0.490-1.705	24000/F(kHz)	30
1.705-30.0	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

TEST PROCEDURE

ANSI C63.10-2013.

The EUT is set to transmit in a continuous mode.

High-Q Cavity Notch filters are used to reduce the amplitude of the intentional transmitter and prevent overload of the system preamplifier.

12. FIXED BASE STATION DATABASE CERTIFICATION TESTS

Test Procedure

Both base and client software and hardware are identical the only difference is the deployment location. The test requirements were done on the base except for a few scenarios where client was also tested.

12.1. Fixed WSD Registration

CLAUSES

- §15.713(g)(3)

REQUIREMENT

- The Fixed WSD must provide the required information to the database and obtain a successful registration.
- The management software must be able to collect the data listed below. Confirm that the EUT will not operate unless a successful registration notification is received from the database.
 - i. FCC ID
 - ii. Serial Number
 - iii. Location Coordinates
 - iv. Location uncertainty with 95% accuracy (covered by section 3.8 in this report)
 - v. Antenna Height AGL (must not be > 30 m)
 - vi. Contact information (Device owner and device contact)
- For a fixed WSD without a direct connection to the internet, confirm that registration through a registered fixed device takes place only on a channel available to that registered device.
- **PRE-REGISTRATION PROCESS**
- Both the Base and Client Station are registered using an authorized database via the Internet at the depot facility. Following registration a common available channel between each is site is selected as the initial transmitting channel for each site. This channel will be the initial “listening” channel for the Remote Station

12.1.1. SUCCESSFUL REGISTRATION

TEST PROCEDURE

- Configure the base EUT with correct registration information:
 - The FCC ID and serial number are permanently programmed to the device and cannot be modified.
 - Known acceptable geographic coordinates, antenna height AGL and contact information were entered into the EUT.
- The base EUT automatically contacts the TVWS Database to perform device registration.
- Upon successful registration, the base EUT automatically contacts the TVWS Database to retrieve device channel list.
- Selects a channel from the channel list returned from the TVWS Database and start normal radio operation on the selected channel.
- Verify base output signal on the selected channel on the spectrum analyzer.

RESULTS

The EUT successfully registered when correct registration information was submitted to the TVWS Database. The EUT transmission was observed on the spectrum analyzer on the selected TV channel from the returned channel list from the TVWS Database.

Test Results			
Pass	Fail	Tested By	Test Date
☒	☐	37699 CS	05/03/17

12.1.2. FAILED REGISTRATION – Location Coordinates

TEST PROCEDURE

- Configure the EUT with restricted coordinates: LAT=40° 34' 18.9264" (40.571924), LNG=-130° 0' 0" (-130) which is a location that is prohibited to transmit
- Observe the base EUT registration failure indicated by the database message

RESULT

The base EUT failed to register when restricted coordinates information were submitted to the TVWS Database.

Test Results			
Pass	Fail	Tested By	Test Date
☒	☐	37699 CS	05/03/17

12.1.3. FAILED REGISTRATION – ANTENNA HEIGHT AGL

TEST PROCEDURE

- Configure the EUT with antenna height Above Ground Level (AGL) > 30 meters.
- Observe the base registration failure indicated by the database message.

RESULTS

The base EUT failed to register when it is set to a location with antenna AGL above the limit.

Test Results			
Pass	Fail	Tested By	Test Date
☒	☐	37699 CS	05/03/17

Antenna AGL > 30m

The screenshot displays the 'TV Band Device Configuration' web page. A warning dialog box is present, stating: 'The page at http://192.168.0.212 says: Device Registration failed! Check highlighted fields.' The 'Height Above Ground Lvl (m)' field is highlighted in red, with a message 'Out of bounds | Enter between [0, 30]'. The interface includes sections for 'TV Band Device Configuration', 'Location Information', 'Installer Information', 'Contact Information', and 'Registrant Information'.

12.1.4. FAILED REGISTRATION –CONTACT INFORMATION

TEST PROCEDURE

- Configure the base EUT with missing contact information, e.g. email.
- The device software cannot proceed with registration and prompts user to enter the missing information.

RESULTS

Software didn't proceed with registration when contact information fields are missing.

Test Results			
Pass	Fail	Tested By	Test Date
☒	☐	37699 CS	05/03/17

Contact information missing field

The screenshot shows a web browser window titled "TV Band Device Configuration" at the URL "http://192.168.0.212/rvbdConfig.html". A yellow warning dialog box is displayed in the center, stating: "The page at http://192.168.0.212 says: Device Registration failed! Check highlighted fields". The background interface includes a sidebar with "System Admin", "Tools", "Radio Control", and "Video Control". The main content area is divided into several sections: "TV Band Device Configuration" (with fields for Radio, FCC ID, Serial Number, etc.), "Location Information" (with Latitude, Longitude, and Channel List), "Installer Information" (with First Name, Last Name, and Identification), "Contact information" (with First Name, Last Name, Address, City, State, Zip Code, Mobile Phone, Work Phone, Email, and Country), and "Registrant information" (with First Name, Last Name, Address, City, State, Zip Code, Mobile Phone, Work Phone, Email, and Country). The "Email" field in the "Contact information" section is highlighted in red, indicating it is a required field that is missing or invalid. At the bottom, there are buttons for "Register Device" and "Unregister Device".

12.2. FIXED WSD CHANNELS OF OPERATION

CLAUSES

- §15.711(c)(2)(ii)

REQUIREMENT

Confirm that the device only operates on channels provided by the database

TEST PROCEDURE

- The base EUT geographic coordinates are entered at registration time and stored in the device. The device channel list request uses the same coordinates established at registration time. No separate coordinates can be entered for channel list request.
- The device requires professional installation and device registration information including device location will be entered by the professional installer.
- Once the registration is complete, upon power cycling the device will use the stored registration location for channel list request.

RESULTS

The device only uses its registered location for channel list request. The device registered location will be established at installation time by a professional installer and cannot be altered after installation

Channel list after successful registration

The screenshot displays the 'TV Band Device Configuration' web interface. On the left, a sidebar contains links for 'System Admin', 'Tools', 'Radio Control', and 'Video Control'. The main content area is titled 'TV Band Device Configuration' and is divided into several sections:

- Device Information:** Fields for Radio (1), FCC ID (2ABC-50739), Serial Number (00001), Transmission Line Loss (dB) (3), Height Above Ground Lvl (m) (30), and Antenna Gain (12 dBi).
- Radio Information:** Fields for Status (Down), Enable Radio? (Yes), Start Radio on Startup? (checked), and Receive Frequency? (Channel 44 | 653 MHz).
- Location Information:** Fields for Latitude (degrees) (33.144444) and Longitude (degrees) (-117.224444).
- Channel List:** A dropdown menu showing 'Select a channel from the list' with a list of available channels: Channel 14 | 473 MHz, Channel 28 | 557 MHz, and Channel 45 | 659 MHz.
- Installer Information:** Fields for First Name (John), Last Name (Clark), and Identification (MSC).
- Contact information:** Fields for First Name (John), Last Name (Doe), Address 1 (123 apple rd), Address 2, City (Anywhere), State (NJ), Zip Code (08854), Mobile Phone (123-456-7681), Work Phone (123-456-9871), and Email (jclark@metricsystems.com).
- Registrant information:** Fields for First Name (General), Last Name (Inquiries), Address 1 (3055 Enterprise Cour), Address 2, City (Vista), State (CA), Zip Code (92081), Mobile Phone (760-560-0348), Work Phone (760-560-0348), and Email (jeclark@metricsystems.com).

The 'Channel List' dropdown is currently open, showing the available channels. The 'Get Available Channel' button is also visible.

12.3. FIXED TVDB DATABASE UPDATE

CLAUSES

- §15.711(h)

REQUIREMENT

If a fixed or Mode II personal/portable TVBD fails to successfully contact the white space database during any given day, it may continue to operate until 11:59 p.m. of the following day at which time it must cease operations until it re-establishes contact with the white space database and re-verifies its list of available channels.

To simulate that the device fails to successfully contact the database, block access to the database from the WSD by removing connection to the database. All other radio functions, including internet connectivity should be maintained. Confirm that the WSD ceases operation by 11:59PM on the following day

TEST PROCEDURE

- Set the base EUT to normal operation mode:
 - Enter proper registration information on the base.
 - Base contacts the TVWS to perform registration.
 - Base contacts the TVWS to retrieve channel list.
 - Select an operating channel from returned channel list.
 - Enable base transmission.
- Observe the base EUT output signal on the spectrum analyzer.
- Use a programmable router to block the database URL.
- Observe that there is no output signal from the base after 11:59 PM on the following day.

RESULTS

During normal operation, the base and client channel lists are updated periodically by sending channel list requests to the TVWS Database. For test purposes this time period was shortened. After the database access was blocked, the next channel list requests failed and the EUTs stopped transmission immediately.

12.4. 48 HOUR CHANNEL SCHEDULING

CLAUSES

- FCC §15.711(c)(2)(iii)
- FCC §15.713(a)(1)

REQUIREMENT

Each fixed whitespace device shall access the database at least once a day to verify that the operating channels continue to remain available. Each fixed white space device must adjust its use of channels in accordance with channel availability schedule information provided by its database for the 48-hour period beginning at the time the device last accessed the database for a list of available channels.

After receiving an available channel list, register a low-power auxiliary device on the WSD operating channel to operate on an available channel and in the upcoming time period when the device will be tested. Repeat the available channel request after the update interval and in the time period when the low-power auxiliary device is scheduled to operate, and confirm that the low-power device is accounted for in the schedule. Using the system management software, confirm that the device changes channels at the scheduled time.

TEST PROCEDURE

1. A lower power auxiliary devices are registered and scheduled for protection at both base and client locations
2. Allow the base and client EUT to enter normal operations prior to testing
3. Upon channel list request to the TVWS Database, the base EUT obtains the channel list expiration time reflecting the low power auxiliary device's registered protection period
4. The base EUT requests new channel list upon the channel list expiration time and the base EUT's current operation channel is no longer in the returned channel list
5. The base EUT ceases transmission on the protected channel immediately
6. Steps 3-5 were repeated for client EUT

12.4.2. RESULTS FOR CLIENT

12.5. WSD CHANNEL AVAILABILITY

CLAUSES

- FCC §15.707
- FCC §15.711(c)
- FCC §15.712

REQUIREMENT

Confirm that WSD properly identifies itself as fixed or personal/portable to the database by comparing the channel list provided by the database with those allowable to the class of WSD under test. Confirm that the WSD is operating on a channel or channels from the list at the authorized power and cannot be made to operate on an unauthorized channel.

TEST PROCEDURE

- Configure the base EUT with correct registration information.
- The base EUT automatically contacts the TVWS Database to perform device registration.
- Upon successful registration, base automatically contacts the TVWS Database to retrieve device channels.
- Confirm the base EUT software only allows the user to select a channel from the channel list returned from the database which are within the device operating frequency range
- Upon successful registration the database returns the allowable power according to the device type.
- Verify on the spectrum analyzer that the base EUT is operating on the selected channel

RESULTS

The EUT operates on a channel from the authorized channel list and at the authorized power level. The EUT cannot select and operate on any channel other than those within the authorized channel list returned from the TVWS Database, which are within the device operating frequency range.

12.6. SECURITY

CLAUSES

- §15.715(f)
- §15.713(i)
- §15.711(j)

REQUIREMENT

The device operations procedures must include documentation with a detailed explanation of the following for each database the device is expected to work with:

- i. What communication protocol is used between the database and the WSD?
- ii. How are communications initiated?
- iii. How does the WSD validate messages from the database?
- iv. How does the device handle failure to communicate or authenticate the database?
- v. How does the database validate messages from a WSD?
- vi. What encryption method is used?
- vii. How does the database ensure secure registration of protected devices?

ANSWERS

- i. *What communication protocol is used between the database and the WSD?*

The Fixed WSD (WSD) connects to the Spectrum Bridge, Inc. (Spectrum Bridge) database using HTTP over SSL/TLS. The protocol, as certified by Spectrum Bridge at the FCC, used over this transport layer is similar to the IETF Protocol to Access White Space (PAWS) Draft-12 specification.

- ii. *How are communications initiated?*

The WSD initiates communication with the Spectrum Bridge database by initially sending an INIT_REQ message containing a Device Descriptor. The Device Descriptor element contains the device serial number, manufacturer ID, and model ID, which in the US is FCC ID.

- iii. *How does the WSD validate messages from the database?*

The identity of the Spectrum Bridge database is validated through verification of the Spectrum Bridge SSL certificate through standard third-party certificate authority mechanisms, ensuring communications are secure and authenticated between the WSD and the database.

At the application layer both the WSD and database only handle messages that conform to the PAWS protocol specification. One additional message validation feature included in PAWS is the ability for the WSD to correlate a response with a specific request by comparing the message's ID field with the ID field of the request that was sent.

iv. *How does the device handle failure to communicate or authenticate the database?*

If the WSD has never communicated with or authenticated the database, it will not begin operation. If the WSD experiences a communication or authentication failure, then it will cease operation at 11:59 PM on the following day.

v. *How does the database validate messages from a WSD?*

The database validates messages from the WSD by checking the serial number and FCC ID received in the Device Descriptor data element present in every message versus a table of valid client devices that is populated when the device is manufactured. The list of valid serial numbers is communicated from device manufacturer to Spectrum Bridge via "out-of-band means," such as email or telephone.

vi. *What encryption method is used?*

SSL/TLS standard encryption is used to encrypt packets sent between WSD and database.

vii. *How does the database ensure secure registration of protected devices?*

In this document, we interpret "protected devices" to mean entities authorized by the rules for protection from WSD transmissions, e.g., Temporary BAS, MVPD, Licensed and Unlicensed Microphones.

Spectrum Bridge provides a public interface that is available to entities authorized for protection under CFR Title 47 Part 15 Subpart H. The Spectrum Bridge registration system requires entities seeking protection to register for an account on the Spectrum Bridge site before they can create protected contours. Once a user creates an account, they can create new and view previously created registrations via the Spectrum Bridge registration site.

Spectrum Bridge maintains two parallel registration sites. The first, production registration site, is available to entities seeking protection from operational WSDs. The second, test and integration site is available to those device manufacturers looking to integrate with the Spectrum Bridge database and to FCC and test laboratories looking to test functionality of a WSD operating in conjunction with the Spectrum Bridge database. The test and integration site is provided so as to not corrupt data in the live production site with records used for testing only. The two registration sites can be accessed via these addresses:

1. Live production registration site:

<https://whitespaces.spectrumbridge.com/protectedentityregistration/lowpowerauxunlicensedregistration.aspx>

2. Test and integration registration site:

twws-demo.spectrumbridge.com

Testers should note that while a device is being tested for certification, it will be connecting to the Spectrum Bridge test and integration server.

To test the WSD for operation in conjunction with registered protected entities, the tester must register for protection on the test and integration server (#2) listed above.

12.7. Push notification to Fixed

CLAUSES

- §15.711(i)

REQUIREMENT

Confirm that the WSD device changes channels (or cease operation) when it receives 'push' notification from the database.

Using system management software, register the device at (specific coordinates) and wait for the database to send a push notification. Confirm that, once the notification is received, the device responds to the new channel availability list provided by the database, which would include ceasing operation on a channel no longer available, or ceases operation.

TEST PROCEDURE

- Obtain a successful registration to the database.
- Transmit on desired channel
- Wait for database to send a push notification to cease operation on desired channel
- Confirm that once the push notification is received, a new channel availability list is provided and the desired channel ceases operation.

Test Results			
Pass	Fail	Tested By	Test Date
☒	☐	37699 CS	05/04/17 – 05/05/17

Due to the push notification and 48hr channel scheduling only differing in time scheduled. The same event from the 48hr channel scheduling test was used to cover this requirement.

12.7.1. RESULTS FOR CLIENT

12.8. Location accuracy

CLAUSES

- §15.711(b)

REQUIREMENT

For Fixed and Mode II devices, provide details regarding the technologies used by the device to determine its location and how, in case of other than GPS technology, the location uncertainty is calculated with a 95% confidence level

RESULTS

See theory of operations for details on Location accuracy

12.9. Interference protection requirement

CLAUSES

- §15.712

REQUIREMENT

Using system management software or database, provide different location (coordinates) so that compliance with operating channel and power level is shown under each of the scenarios outlines in §15.712. Include a sample scan showing the total channel power and adjacent channel emission settings for test coordinates.

TEST PROCEDURE

For the scenarios listed below confirm there is no allowance of transmission on specific channels according to that particular location

Scenarios

- a) Digital television stations, and digital and analog Class A TV, low power TV, TV translator and TV booster stations
- b) TV translator, Low power TV(including Class A) and Multi-channel Video Programming Distributor (MVPD)
- c) Fixed Broadcast Auxiliary Service (BAS) links
- d) PLMR/CMRS operations
- e) Offshore Radiotelephone Service
- f) Low power auxiliary services including wireless microphones
- g) Border areas near Canada and Mexico
- h) Radio astronomy services
- i) 600 Mhz service band
- j) Wireless Medical Telemetry Service
- k) 488-494 MHz band in Hawaii

RESULTS

Scenario		Coordinate	Note
a	Digital television stations, and digital and analog Class A TV, low power TV, TV translator and TV booster stations	38.73829, -108.887 (VHF) 35.775, -106.24555 (UHF)	UHF No transmission allowed VHF coordinate cannot transmit on Ch. 13
b	TV translator, Low power TV(including Class A) and Multi-channel Video Programming Distributor (MVPD)	43.80102, -111.778 (UHF) 35.66218, -117.604 (VHF)	UHF coordinate cannot transmit Ch. 23 VHF coordinate cannot transmit Ch. 11
c	Fixed Broadcast Auxiliary Service (BAS) links	41.890417, -87.623694	Cannot transmit on Ch. 28
d	PLMR/CMRS operations	18.954722, -77.004722	Cannot transmit on Ch. 17 and 18
e	Offshore Radio telephone Service	18.954722, -77.004722	Cannot transmit on Ch. 17 and 18
f	Low power auxiliary services including wireless microphones	N/A	48 hour channel scheduling requirement was based off this scenario
g	Border areas near Canada and Mexico	32.608179, -116.969585	Cannot transmit on Ch. 6 and 32
h	Radio astronomy services	35.775, -106.24555	No channels available
i	600 MHz service band	40.78698, -119.206486	Cannot transmit on Ch. 36, 37 and 38
j	Wireless Medical Telemetry Service	N/A	EUT does not support transmission in this frequency band
k	488-494 MHz band in Hawaii	19.7071, -155.0885	Cannot transmit on Ch. 17
