Assessment Information:

This report contains an assessment of the EUT against Electromagnetic Compatibility based upon tests carried out on the samples submitted. The results contained in this report relate only to the items tested. Manufactured products will not necessarily give identical results due to production and measurement tolerances. QualiTech, EMC Lab does not assume responsibility for any conclusion and generalization drawn from the test results with regards to other specimens or samples of type of the equipment represented by test item.

The EUT was setup and exercised using the configuration, modes of operation and arrangements defined in this report only.

Modifications:

Modifications made to the EUT

None

Modifications made to the Test Standard

None

System Test Configuration

Justification:

In order to select worst-case host for full testing of limited modular approval certification, investigative fundamental emission from channel 20 (2442MHz) was performed. The results of the investigative fundamental emission appear in the table below.

*Unit name	2442MHz level (dBuv/m) @ 3 meter
RC306	86.957
RS630	91.427
RC Base station	93.771

Based on the above results, the Base Unit was selected as the worst case host for full testing.

Refer to customer's declarations below for description of the differences between the models. None of the differences affects the radio performance of the EUT.

*The models above represent all models mentioned in the manufacturer's declaration below.

Customer's declaration

Date: January 11, 2018

DECLARATION

I Hereby declare that

Model RC304, RC306, RC306p, RC312, RC312p, XR2 1000, XR2 1500, XR2 2000 are identical physically and mechanically. The models differ only by the battery capacity (2.4Ah vs 3Ah), by the DC motor type (brushless vs. brush) and by the shape and the color of the plastic cover.

The difference in the above listed hosts do not affect the radio modules in the devices. Please related to them all (from a Radio point of view) as the same product.
