Footnotes For N/A's:

15.207 (c) Measurements to demonstrate compliance with the conducted limits are not required for devices which only employ battery power for operation and which do not operate from the AC power lines or contain provisions for operation while connected to the AC power lines. Devices that include, or make provisions for, the use of battery chargers which permit operating while charging, AC adapters or battery eliminators or that connect to the AC power lines indirectly, obtaining their power through another device which is connected to the AC power lines, shall be tested to demonstrate compliance with the conducted limits.

**Description of EUT**

The Intelliport Radio Model B1 is a part of the Intelliport Anesthesia Management System which is capable of identifying the drug type and concentration of medication in a syringe attached to its fluid inlet port and measuring the exact dosage of drug delivered through the injection port; time stamping the event; and, sending the corresponding data wirelessly to external devices and healthcare information systems. . It communicates with a USB dongle that passes information to a generic laptop computer.

The EUT (in test mode) was set to continuously transmit a modulated carrier.

Section 4. Radiated Emissions

NAME OF TEST: Radiated Emissions	PARA. NO.: 15.249
TESTED BY: Mark Phillips	DATE: 01/23/2014

Minimum Standard: Para no. 15.249

(a) The field strengths shall not exceed the following **average** limits:

Carrier (MHz)	Field Strength (mV/m)	Field Strength (dB μ V)	Harmonic (μ V/m)	Harmonic (dB μ V)
902-928	50	94	500	54
2400-2483.5	50	94	500	54
5725-5875	50	94	500	54
24000-24250	250	108	2500	68

(b) Field strength limits are specified at a distance of 3 metres.

(c) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated limits of 15.209 whichever is the less attenuation.

(d) ...for frequencies above 1000 MHz, the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.
