

Cost-sensitive m1805 Module MS48SF2 Specification

UART module MS48SF2 is based on m1805 Chipset. It is a small size (16×12×2mm) and stand-alone module with 12 GPIO. The data transmission between module and mobile phone can be achieved via operation of UART. With up to 60-meter working distance in open space, 512KB flash memory, etc., the data can be transmitted via Bluetooth

Features

Range: 10-60M (open space)
Flash memory: 512KB
Received sensitivity: -97dBm
Transmitted power: -20~+5dBm
Transmitted current: 8mA/0dBm
Received current: 8mA
GPIO: 12
Size: 15.8×12×2mm
Working voltage: 3.0- 3.6V
Working frequency: 2400-2483 MHz
Working temperature: -30°C- +60 °C
Depth optimization of BLE stack
Power consumption of sleep mode is under 4uA
Transmission speed is up to 3kB/s
UART instruction supported
Android 4.3+, IOS 7+ supported
MFi is not required
50 ohm PCB antenna
With metal cover shield

Applications

Medical devices
Heart rate monitor
Blood pressure monitor
Blood glucose meter
Thermometer
Sport facilities
Weighing machine
Sports and fitness sensors
Accessories
3D glasses and gaming controller
Mobile accessories
Remote controllers / Toys
Electronic devices
Cycle computer

Certification

ISO 9001
ISO14001
OHS18001

1. Product introduction

UART module MS48SF2 is based on m1805 Chipset. It is a small size (16×12×2mm) and stand-alone module with 12 GPIO. The data transmission between module and mobile phone can be achieved via operation of UART. With up to 60-meter working distance in open space, 512KB flash memory and -97dBm received sensitivity, the data can be transmitted via Bluetooth.

MS48SF2 is a compact module with a metal cover shield which can support Android 4.3+, IOS 7+. Its BLE stack can be depth optimization and the transmission speed is up to 3kB/s.

3. Electrical specification

The electrical specifications of the module are directly related to the Specifications for the m1805 chipset. The below information is only the extract from m1805 specification. For more detailed information, please refer to the up-to-date specification of the chipset available.

3.1 Absolute maximum ratings

Symbol	Parameter	Min.	Max	Unit
Supply voltages				
VDD3		-0.3	+3.6	V
DEC			1.32	V
VSS			0	V
I/O Pin voltage				
VIO		-0.3	VDD + 0.3V	V
Environmental (AQFN package)				
Storage temperature		-40	+125	°C
MSL	Moisture Sensitivity Level		3	
ESD HBM	Human Body Model Class 2		2	KV
ESD CDM _{QF}	Charged Device Model		500	V
Flash memory				
Endurance			20000	Write/erase cycles
Retention			10 years at 40°C	
Number of times an address can be written between erase cycles			2	Times

Notes : Maximum ratings are the extreme limits to which the chip can be exposed for a limited amount of time without permanently damaging it. Exposure to absolute maximum ratings for prolonged periods of time may affect the reliability of the device.

3.2 Recommended operating conditions

Symbol	Parameter	Min.	Nom.	Max.	Units
VDD3	supply voltage,normal mode	1.8	3.0	3.6	V
tr_VDD	Supply rise time (0 V to 1.8 V)			100	ms
TA	Operating temperature	-40	27	125	°C

Important : The On-chip power-on reset circuitry may not function properly for rise times longer than the specified maximum.

3.3 Electronic characteristic

3.3.1 General radio characteristics

Parameter	Description	Min.	TYP	Max.	Units
Tx only at 0dBm	With internal DC-DC @ 3V		8		mA
Rx only	With internal DC-DC @ 3V		8		mA

3.3.2 Radio current consumption (Transmitter)

Parameter	Description	Min.	Typ.	Max.	Units
RF Max output Power			10		dBm
RF Min Output Power			-20		dBm

7. Notes & cautions

We cannot assure that the specification has no errors and omission even though this specification is under collate and check strictly.

This specification is under the protection of laws and regulations of copyright, please do not copy and duplicate at any form, or do not transmit part or full of this specification in any wire and wireless network in any form, or do not edit or translate to any other format, word, code, etc.

7.1 Design notes

(1) It is critical to following the recommendations of this document to ensure the module meets the specifications.

(2) The module should be placed at the edge of the circuit board as far as possible to keep away from other circuits.

(3) Antenna should be kept away from other circuits. It can prevent low radiation efficiency and the normal use of other circuits from being affected.

(4) The landing of components should be appropriate and that is better for reducing the parasitic inductance.

(5) Please refuse to supply voltage that is not within the range of specification.

(6) Please make sure the module or its surface may not suffer from the physical shock or extreme stress.

7.2 Layout notes

To make sure wireless performance is at its best condition, please layout the module on the carrier board as below instructions and picture.

(1) Placement of the antenna

The antenna area of module shall lay clearance completely and should not be blocked by the metal. Otherwise it will have effect on antenna performance (As the picture indicated below).

(2) Placement of top-layer

The placement of top-layer in carrier board shall be lay copper completely to reduce the signal line in carrier board or other interference.

(3) Clearance

The upper and below area of antenna (including the case) shall have 4mm or more than 4mm clearance to reduce the influences for antenna.

*The Grey area above is Carrier board.

7.3 Installation and soldering

(1) Please do not lay copper under the module antenna. It can prevent the influence of signal radiation and the transmission distance from being affected.

7.4 Handling and storage

(1) Due to the fact that CMOS components are included in the module, it is better to eliminate static electricity at any methods when transporting or working with the module. Moreover, it is strongly recommended adding anti-ESD components to circuit design to hinder damage from real-life ESD events. Anti-ESD methods can be also used in mechanical design.

(2) Please store the modules within -40°C to $+125^{\circ}\text{C}$ before and after installation and make sure the modules is away from the direct sunlight exposure for a long duration. Modules should be far away from humid and salty air conditions, and any corrosive gasses or substances.

(3) Please not to wash the module. No-Clean Paste is used in production. The metal shield may be oxidized by the washing process and may lead to chemistry reaction with No-Clean Paste. If modules goes through the washing process, functions of the module may not guaranteed.

7.5 Life support applications

(1) The module is not design for life support device or system and not allowed to be used in destructive devices or system in any direct, or indirect ways. Minew is not responsible for compensation of any losses when applying modules under such application as described above.

(2) Minew shall not responsible for the customer's products or application.

8. Disclaimer

The factory has passed the ISO9001 quality management system, ISO14001 environmental management system and OAHS18001 occupational health and safety assessment . Each product has been rigorously tested (transmission power test, sensitivity test, power consumption test, stability test, aging test, etc.).

FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

This module meets the requirements of FCC part 15C(15.247).it specifically establish the 6dB Bandwidth, Peak Output Power, Radiated Spurious Emission, Power Spectral Density, Restricted Band of Operation and Band Edge, Out of Band Emissions. It is a single module. PCB antenna, antenna gain tolerance:-2.48dBi $\pm$ 0.5

The antenna cannot be removed , Unconventional interface, The module with trace antenna designs, and This manual has been shown the layout of trace design, antenna, connectors, and isolation requirements.

This module It's complies with FCC RF radiation exposure limits set forth for an uncontrolled environment.

This module is designed to comply with the FCC

statement, FCC ID is: **2ABU6-MS48SF2**.

The host system using this module, should have label in a visible area indicated the following texts:

"Contains FCC ID: **2ABU6-MS48SF2**.

SHENZHEN MINEW TECHNOLOGIES CO., LTD. can increase the utility of our modular transmitters by providing instructions that simulates or characterizes a connection by enabling a transmitter.

The module without unintentional-radiator digital circuitry, so the module does not require an evaluation by FCC Part 15 Subpart B. The host shoule be evaluated by the FCC Subpart B.
