According to Appendix A of KDB 447498 D01 General RF Exposure Guidance v05r01, for EUT working in the 2.4GHz ISM band with EIRP $\leq 10\text{mW}$ (with test separation distance $\leq 5\text{mm}$), it is deemed to fulfill the SAR requirements without test.

As we can see from the test report 140201309SHA-001:
The maximum EIRP = $7.30\text{dBm} = 5.40\text{mW}$

It is found the EIRP of EUT is lower than the test exclusion limit. Therefore, the EUT complies the requirement of 15.247(I) without test.
