

## FCC TEST REPORT

For

Platinum Access Systems Inc.

RF Receiver

Model No.: JJ-JS-181

Prepared for : Platinum Access Systems Inc.  
Address : 1725 E. Grevillea CT.Ontario, CA 91761 USA

Prepared by : Shenzhen LCS Compliance Testing Laboratory Ltd.  
Address : 1/F., Xingyuan Industrial Park, Tongda Road, Bao'an  
Avenue, Bao'an District, Shenzhen, Guangdong, China

Date of receipt of test sample : January 17, 2014  
Number of tested samples : 1  
Serial number : Prototype  
Date of Test : January 17, 2014 - February 25, 2014  
Date of Report : February 25, 2014

**FCC TEST REPORT**

## 2. GENERAL INFORMATION

### 2.1. Description of Device (EUT)

EUT : RF Receiver

Model Number : JJ-JS-181

Power Supply : DC 12V by Battery

Modulation Type : ASK

Receiving Frequency : 433.92MHz

Receiving Antenna : PCB Antenna, 2dBi

### 2.2. Support Equipment List

| Manufacturer | Description | Model | Serial Number | Certificate |
|--------------|-------------|-------|---------------|-------------|
| --           | --          | --    | --            | --          |

### 2.3. External I/O Port

| I/O Port Description | Quantity | Cable |
|----------------------|----------|-------|
| --                   | --       | --    |

## 2.4. Description of Test Facility

### Site Description

#### EMC Lab.

: Accredited by CNAS, June 04, 2010

The Certificate Registration Number. is L4595.

Accredited by FCC, July 14, 2011

The Certificate Registration Number. is 899208.

Accredited by Industry Canada, May. 02, 2011

The Certificate Registration Number. is 9642A-1

Accredited by VCCI, Japan January 30, 2012

The Certificate Registration Number. is C-4260 and R-3804

Accredited by ESMD, April 24, 2012

The Certificate Registration Number. is ARCB0108.

Accredited by UL, June 11, 2012

The Certificate Registration Number. is 100571-492.

Accredited by TUV, November 21, 2012

The Certificate Registration Number. is SCN1081

Accredited by Intertek, December 21, 2012

The Certificate Registration Number. is 2011-RTL-L1-50.

## 2.5.Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. To CISPR 16 – 4 “Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements” and is documented in the LCS quality system acc. To DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

## 2.6.Measurement Uncertainty

| Test Item              |   | Frequency Range | Uncertainty         | Note |
|------------------------|---|-----------------|---------------------|------|
| Radiation Uncertainty  | : | 30MHz~200MHz    | $\pm 2.96\text{dB}$ | (1)  |
|                        | : | 200MHz~1000MHz  | $\pm 3.10\text{dB}$ | (1)  |
|                        | : | 1GHz~26.5GHz    | $\pm 3.80\text{dB}$ | (1)  |
| Conduction Uncertainty | : | 150kHz~30MHz    | $\pm 1.63\text{dB}$ | (1)  |
| Power disturbance      | : | 30MHz~300MHz    | $\pm 1.60\text{dB}$ | (1)  |

- (1). This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

### 3. RADIATED EMISSION MEASUREMENT

#### 3.1. Test Equipment

The following test equipments are used during the radiated emission measurement:

| Item | Equipment                | Manufacturer   | Model No.                        | Serial No.  | Last Cal.  | Next Cal.  |
|------|--------------------------|----------------|----------------------------------|-------------|------------|------------|
| 1    | 3m Semi Anechoic Chamber | SIDT FRANKONIA | SAC-3M                           | 03CH03-HY   | 2013-06-18 | 2014-06-17 |
| 2    | Amplifier                | SCHAFFNER      | COA9231A                         | 18667       | 2013-06-18 | 2014-06-17 |
| 3    | Amplifier                | Agilent        | 8449B                            | 3008A02120  | 2013-06-16 | 2014-06-15 |
| 4    | Amplifier                | MITEQ          | AMF-6F-260400                    | 9121372     | 2013-06-16 | 2014-06-15 |

| 12   | RF Cable-HIGH            | SUHNER         | SUCOFLEX 106                     | 03CH03-HY   | 2013-06-18 | 2014-06-17 |

#### 3.2. Block Diagram of Test Setup

### 3.3.Radiated Emission Limit (Class B)

| FREQUENCY<br>MHz | DISTANCE<br>Meters | FIELD STRENGTHS LIMIT |                                   |
|------------------|--------------------|-----------------------|-----------------------------------|
|                  |                    | $\mu\text{V/m}$       | $\text{dB}(\mu\text{V})/\text{m}$ |
| 30~88            | 3                  | 100                   | 40.0                              |
| 88~216           | 3                  | 150                   | 43.5                              |
| 216~960          | 3                  | 200                   | 46.0                              |
| 960~1000         | 3                  | 500                   | 54.0                              |

Remark : (1) Emission level  $(\text{dB})\mu\text{V} = 20 \log \text{Emission level } \mu\text{V/m}$

(2) The smaller limit shall apply at the cross point between two frequency bands.

(3) Distance is the distance in meters between the measuring instrument, antenna and the closest point of any part of the device or system

| Limits for radiated disturbance Above 1GHz                 |                      |                                               |                                            |
|------------------------------------------------------------|----------------------|-----------------------------------------------|--------------------------------------------|
| FREQUENCY<br>(MHz)                                         | DISTANCE<br>(Meters) | FIELD STRENGTHS LIMIT                         |                                            |
|                                                            |                      | Average Limit<br>( $\text{dB}\mu\text{V/m}$ ) | Peak Limit<br>( $\text{dB}\mu\text{V/m}$ ) |
| 1000-10 Harmonics                                          | 3                    | 54                                            | 74                                         |
| Note: The lower limit applies at the transition frequency. |                      |                                               |                                            |

### 3.4.EUT Configuration on Measurement

The following equipment are installed on Radiated Emission Measurement to meet the commission requirements and operating regulations in a manner which tends to maximize its emission characteristics in normal application.

### 3.5.Operating Condition of EUT

- (1) Setup the EUT as shown in Section 4.2.
- (2) Let the EUT work in test mode (on) and measure it.

### 3.6.Test Procedure

1. Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
4. For each suspected emissions, the antenna tower was scan (from 1 m to 4 m) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading
5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
6. For emissions above 1GHz, use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer.

7. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

8. If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.

9. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.

10. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High – Low scan is not required in this case.

EUT and its simulators are placed on a turntable, which is 0.8 meter high above ground. The turntable can rotate 360 degrees to determine the position of the maximum emission level. EUT is set 3.0 meters away from the receiving antenna, which is mounted on a antenna tower. The antenna can be moved up and down between 1.0 meter and 4 meters to find out the maximum emission level. Broadband antenna (calibrated by-log antenna) is used as receiving antenna. Both horizontal and vertical polarization of the antenna is set on measurement. In order to find the maximum emission levels, all of the interface cables must be manipulated according to ANSI C63.4-2009 on radiated emission measurement.

### 3.7. Test Results

**PASS.**

The test data please refer to following page.
