

# FCC RADIO TEST REPORT

**FCC ID** : 2ABZ2-OPD2415  
**Equipment** : tablet  
**Brand Name** : ONEPLUS  
**Model Name** : OPD2415  
**Marketing Name** : OnePlus Pad 3  
**Applicant** : OnePlus Technology (Shenzhen) Co., Ltd.  
18C02, 18C03, 18C04, and 18C05, Shum Yip Terra Building, Binhe Avenue North, Futian District, Shenzhen, Guangdong, P.R. China  
**Manufacturer** : OnePlus Technology (Shenzhen) Co., Ltd.  
18C02, 18C03, 18C04, and 18C05, Shum Yip Terra Building, Binhe Avenue North, Futian District, Shenzhen, Guangdong, P.R. China  
**Standard** : FCC Part 15 Subpart E §15.407

The product was received on Feb. 11, 2025 and testing was performed from Mar. 20, 2025 to Mar. 22, 2025. We, Sporton International Inc. EMC & Wireless Communications Laboratory, would like to declare that the tested sample has been evaluated in accordance with the test procedures and has been in compliance with the applicable technical standards.

The test results in this partial report apply exclusively to the tested model / sample. Without written approval from Sporton International Inc. EMC & Wireless Communications Laboratory, the test report shall not be reproduced except in full.

Approved by: Louis Wu

**Sporton International Inc. EMC & Wireless Communications Laboratory**

No. 52, Huaya 1st Rd., Guishan Dist., Taoyuan City 333, Taiwan (R.O.C.)

**Conformity Assessment Condition:**

1. The test results (PASS/FAIL) with all measurement uncertainty excluded are presented against the regulation limits or in accordance with the requirements stipulated by the applicant/manufacturee who shall bear all the risks of non-compliance that may potentially occur if measurement uncertainty is taken into account.
2. The measurement uncertainty please refer to each test result in the section "Measurement Uncertainty".

**Disclaimer:**

The product specifications of the EUT presented in the test report that may affect the test assessments are declared by the manufacturer who shall take full responsibility for the authenticity.

FCC designation No.: TW1190

## 1.4 Applicable Standards

According to the specifications declared by the manufacturer, the EUT must comply with the requirements of the following standards:

- ♦ FCC Part 15 Subpart E
- ♦ FCC KDB 789033 D02 General UNII Test Procedures New Rules v02r01.
- ♦ FCC KDB 987594 D02 U-NII 6 GHz EMC Measurement v03
- ♦ ANSI C63.10-2013

**Remark:**

1. All the test items were validated and recorded in accordance with the standards without any modification during the testing.
2. The TAF code is not including all the FCC KDB listed without accreditation.

## **2 Test Result**

### **2.1 Standard Client Proper Power Adjustment Measurement**

#### **2.1.1 Limit of Standard Client Proper Power Adjustment**

15.407 KDB 987594 D02 Section II. L. Power limits for standard client devices

c) The maximum power limits shall remain at least 6 dB below the power levels authorized for the associated standard-power access point

#### **2.1.2 Test Procedures of Standard Client Proper Power Adjustment**

The testing follows FCC KDB 987594 D02 U-NII 6 GHz EMC Measurement v02r01.

Section L. Proper Power Adjustment

#### **2.1.3 Proper Power Adjustment, Client Devices Connected to a Standard Power Access Point**

A client device that connects to a Standard Power AP must limit its power to a minimum of 6 dB lower than its associated Standard Power access point's authorized transmit power. The term "authorized" means the AFC-approved power level for the AP to use on a particular channel.

Test procedure to show that the client device can lower its power accordingly.

#### **2.1.4 Test Procedure:**

1. Connect equipment as shown in Figure 7 below.
2. Adjust Atten 1 to Std Power AP so as to facilitate error free communication with the Client but protect the Client receiver from overload or damage.
3. Configure the Client and AP so that they associate and start sending data (stream data). The AP should be configured such that its registered power is 36 dBm EIRP.
4. Verify transmission between Client and Std Power AP. Additional attenuators may be required to protect measurement equipment. Measure the Client RF power using any of the methods in C63.10 for NII devices.
5. Use this power, along with its antenna gain, to calculate the Client EIRP.
6. The Client EIRP should be minimally 6 dB lower than that of the AP.
7. Repeat Steps 2 through 5 at two other selected measurement points – the first at the midpoint and the second at the lowest rated power of the client as declared by the manufacturer.

**Figure 7. Test setup for conducted testing**

### 2.1.5 Test Result Summary

Companion Standard Power AP: Brand name: Qualcomm, Model name: Wakiki

802.11be 20MHz bandwidth

Test channel 149

|                      | Client Conducted Power (dBm) |        |        | Client EIRP (dBm) | AP EIRP (dBm) | AP to client EIRP Delta (dB) |
|----------------------|------------------------------|--------|--------|-------------------|---------------|------------------------------|
|                      | Ant1                         | Ant2   | MIMO   |                   |               |                              |

| Measurement          | Description                                                                           | Value | Result |
|----------------------|---------------------------------------------------------------------------------------|-------|--------|
| AFC_DUT_SP_OPERATION | AFC DUT transmit with standard power in the band before the Spectrum Inquiry Response | False | Fail   |

RF Test Equipment monitors the output of the AFC DUT on channel 149 bandwidth 20

Confirm that the AFC DUT transmit power in the band is less than CEILING(LPI limits (5 dBm/MHz PSD), SP limits (8.1 dBm/MHz PSD, 21.1 dBm EIRP) in Spectrum Response) and does not exceed limits in adjacent frequencies

Pass Fail

Step 4 : RF Test Equipment verification

Execution passed for 68 seconds

Client conducted power

Ant1  
-18.66dBm

Ant2  
-21.08dBm

## **2.2 Dual Client Test, Demonstration of Proper Power Adjustment based on Associated AP**

### **2.2.1 Limit of Proper Power Adjustment**

15.407 KDB 987594 D02 Section II. K. Power limits for standard client devices

A client device may connect to a Standard Power AP with a maximum power level of 30 dBm EIRP. A client may also connect to a Low Power indoor AP, but the power level is limited to a maximum of 24 dBm EIRP.

### **2.2.2 Test Procedures of Standard Client Proper Power Adjustment**

The testing follows FCC KDB 987594 D02 U-NII 6 GHz EMC Measurement v02r01.

Section K. Dual Client Test, Demonstration of Proper Power Adjustment based on Associated AP

### **2.2.3 Test Procedure:**

1. Connect equipment as shown in Figure 6 below..
2. Adjust Atten 2 to Std Power AP so as to facilitate error free communication with the Client (Atten 1 should be set to High on the RF path to the Low Power AP)
3. Configure the Client and APs so that they associate and start sending data (stream data). It is important that the client is configured to transmit at its highest power level. Initially, because the attenuation on Atten 1 is set high, the Client will only associate with the Std Power AP.
4. Verify transmission between Client and Std Power AP. Additional attenuators may be required to protect measurement equipment. Measure the Client RF power using any of the methods in C63.10 for NII devices.
5. Gradually increase Atten 2 while at the same time decreasing Atten 1. This simulates the Client moving from outdoors to indoors. At some level of attenuation the Client should associate with the Low Power indoor AP.
6. Verify transmission between Client and Low Power AP.
7. Measure the RF power of the Client device using the same method as in step 4. Verify the power is no more than 24 dBm EIRP

**Figure 6. Test setup for conducted testing**

## 2.2.4 Test Result Summary
