Certification Radio test report

According to the standard:
CFR 47 FCC PART 15

Equipment under test:
GROUND MODEM EBEE

FCC ID:
2AC2VGMEBEE

Company:
SENSEFLY

DISTRIBUTION: Mr GILLE

(Company: SENSEFLY)

Number of pages: 74 with 10 appendixes

Ed.	Date	Modified pages	Written by		Technical Verification and Quality Approval	
			Name	Visa	Name	Visa
0	24/08/2015	Creation	M. DUMESNIL	M. D.	O. ROY	

Duplication of this test report is only permitted for an integral photographic facsimile. It includes the number of pages referenced here above.
This document is the result of testing a specimen or a sample of the product submitted. It does not imply an assessment of the conformity of the whole manufactured products of the tested sample.

DESIGNATION OF PRODUCT: GROUND MODEM

Serial number (S/N): EB-02-687

Reference / model (P/N): EBEE

Software version: Not communicated

MANUFACTURER: SENSEFLY

COMPANY SUBMITTING THE PRODUCT:

Company: SENSEFLY

Address: Route de Genève 38
1033 Cheseaux-Lausanne
SWITZERLAND

Responsible: Mr GILLE

DATE(S) OF TEST: Between 04-AUG-2014 to 11-SEP-2014
18 and 19-MAR-2015
21-AUG-2015

TESTING LOCATION: EMITECH ANGERS laboratory at JUIGNE SUR LOIRE (49) FRANCE
EMITECH ANGERS open area test site in JUIGNE SUR LOIRE (49)
FRANCE
21 rue de la Fuye
49610 Juigne sur Loire
France
FCC 2.948 Listed Site Registration Number: 90469
FCC Accredited under US-EU MRA Designation Number: FR0009
Test Firm Registration Number: 873677

TESTED BY: M. DUMESNIL

APPENDIX 10: Signal at antenna connector

1. INTRODUCTION

This document presents the result of RADIO test carried out on the following equipment: **GROUND MODEM EBEE** in accordance with normative reference.

The equipment integrates radio module already certified but the module's OEM manual is not respected.

2. PRODUCT DESCRIPTION

Class:	B
Utilization:	Remote control of drone
Antenna type and gain:	external dipole antenna, 2.5 dBi with RPSMA connector
Operating frequency range:	from 2401.6 MHz to 2476.35 MHz
Number of channels:	76
Channel spacing:	minimum 275 kHz measured
Modulation:	type FHSS
Power source:	5Vdc by an USB connector

Power level, frequency range and channels characteristics are not user adjustable.
The details pictures of the product and the circuit boards are joined with this file.

3. NORMATIVE REFERENCE

The standards and testing methods related throughout this report are those listed below.

They are applied on the whole test report even though the extensions (version, date and amendment) are not repeated.

CFR 47 FCC Part 15 (2014) Radio Frequency Devices

ANSI C63.4 2009
Methods of measurement of Radio-Noise
Emissions from low-voltage Electrical and Electronic Equipment in the Range
of 9 kHz to 40 GHz.

ANSI C63.10 2009
Testing Unlicensed Wireless Devices.

Public Notice DA 00-705 Filing and Measurement Guideline for Frequency Hopping Spread
Spectrum Systems.

4. TEST METHODOLOGY

Radio performance tests procedures given in CFR 47 part 15:

Subpart A –General

Paragraph 19: labelling requirements
Paragraph 21: information to user

Subpart B –Unintentional Radiators

Paragraph 105: information to the user
Paragraph 107: Conducted limits
Paragraph 109: Radiated emission limits
Paragraph 111: Antenna power conduction limits for receivers

Subpart C – Intentional Radiators

Paragraph 203: Antenna requirement
Paragraph 205: Restricted bands of operation
Paragraph 207: Conducted limits
Paragraph 209: Radiated emission limits; general requirements
Paragraph 212: Modular transmitter
Paragraph 215: Additional provisions to the general radiated emission limitations
Paragraph 247: Operation within the bands 902-928 MHz, 2400-2483.5 MHz and 5725-5850
MHz

5. TEST EQUIPMENT CALIBRATION DATES

6. TESTS AND CONCLUSIONS

6.1 general (subpart A)

Test procedure	Description of test	Respected criteria?				Comment
		Yes	No	NAp	NAs	
FCC Part 15.19	LABELLING REQUIREMENTS	X				
FCC Part 15.21	INFORMATION TO USER	X				

NAp: Not Applicable

NAs: Not Asked

LABEL SHALL CONTAIN

The label shall be located in a conspicuous location on the device

The label shall not be a stick-on, paper label. The label on these products shall be permanently affixed to the product and shall be readily visible to the purchaser at the time of purchase

§15.19: (can be placed in the user manual if the product is too small)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

USER NOTICE SHALL CONTAIN

§15.21:

Any changes or modifications to this equipment not expressly approved by SENSEFLY may cause, harmful interference and void the FCC authorization to operate this equipment

Label:

Extract of the notice “eBee and eBee Ag Revision 13 / November 2014” (p3/60):

FCC and iC Compliance statement :

This device complies with part 15 of the FCC Rules and Industry Canada License-exempt RSS standard(s).

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

USER NOTICE SHALL CONTAIN

§ 15.105:

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference's by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Extract of the notice “eBee and EBee Ag Revision 13 / November 2014” (p3/60):

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide a reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and uses in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna
2. Increase the separation between the equipment and the receiver
3. Connect the equipment into a an outlet on a circuit different from that to which the receiver is connected
4. Consult the dealer or an experienced radio/TV technician for help.

6.3 intentional radiator (subpart C)

NAp: Not Applicable

NAs: Not Asked

Note 1: Integral / dedicated antenna. Professionally installed equipment.

Note 2: See FCC part 15.247 (d).

Note 3: See FCC part 15.209. Unwanted emissions levels are all below the fundamental emission field strength level.

Note 4: The system hops to channel frequencies from a pseudo randomly ordered list of hopping frequencies. Each frequency is used equally on the average by the transmitter, and separated by a minimum of 25 kHz / 20 dB bandwidth of the hopping channel (see appendix 7).

The frequency hopping system uses 76 channels (see appendix 9).

The timing by channel is 2340 μ s (see appendix 8).

During 76 channels $\times$ 0.4 s =30.4 s, any channel is used 9 times (see appendix 8), then $9 \times 2340 \mu$ s = 21.06 ms, thus the average time of occupancy on any channel is less than 400 ms within a period of 0.4 seconds multiplied by the number of hopping channels employed, in normal operating mode.

Note 5: We used the radiated method in open field.

RF EXPOSURE:

Note 6: In accordance with KDB 447498 D01 General RF Exposure Guidance v05r02

$PSD = EIRP / (4 * \pi * R^2) = 0.07033 / (4 * \pi * (20 \text{ cm})^2) = 13.99 \times 10^{-6} \text{ mW/cm}^2$ (limit= 1 mW/cm²).

The equipment fulfils the requirements on power density for general population/uncontrolled exposure and therefore fulfils the requirements of 47 CFR §1.1310.

« To declare, or not, the compliance with the specifications, it was not explicitly taken into account of uncertainty associated with the result(s) »

7. MEASUREMENT OF THE CONDUCTED DISTURBANCES

Standard: FCC Part 15

Test procedure: Paragraph 15.107

Limits: Class B

Software used: BAT-EMC V3.6.0.32

Test set up:

The EUT is isolated and placed on a wooden table, 0.8 m over an horizontal reference plane and 0.4 m from a vertical reference plane. It is powered by an artificial main network placed on the ground reference plane. The equipment is powered with the AC power operating voltage of 120 V / 60 Hz.

See photos in appendix 2

Frequency range: 150 kHz - 30 MHz

Detection mode: Peak

Bandwidth: 10 kHz

Equipment under test operating condition:

The equipment is blocked in discovery mode.

Results:

Ambient temperature (°C): 23.4
 Relative humidity (%): 34

Power source: 5Vdc by an USB port of a computer powered in 120Vac / 60Hz

Sample N° 1:

Measurement on the mains power supply:

The measurement is first realized with Peak detector.

Curve N° 1: measurement on the Neutral with peak detector

Curve N° 2: measurement on the Line with peak detector

Test conclusion:

RESPECTED STANDARD

8. RADIATED EMISSION LIMITS

Standard: FCC Part 15

Test procedure: paragraph 109

Limit class: Class B

Test set up:

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS), the EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber, the EUT is placed on a rotating table, 1.5m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

See photos in appendix 2.

Frequency range: From 30 MHz to 12.4GHz (5th harmonic of the highest frequency used)

Detection mode: Quasi-peak (F < 1 GHz) Average (F > 1 GHz)

Bandwidth: 120 kHz (F < 1 GHz) 1 MHz (F > 1 GHz)

Distance of antenna: 10 meters (in open area test site) / 3 meters (in anechoic room)

Antenna height: 1 to 4 meters (in open area test site) / 1.5 meter (in anechoic room)

Antenna polarization: vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment is blocked in discovery mode.

Results:

Ambient temperature (°C): 16.5
Relative humidity (%): 40

Power source: 5Vdc by a USB port of a computer powered in 120Vac / 60Hz

Sample N° 1

FREQUENCIES (MHz)	Detector P: Peak QP: Quasi- Peak	Antenna height (cm)	Azimuth (degree)	Polarization H: Horizontal V: Vertical	Field strength (dBμV/m)	Limits (dBμV/m)	Margin (dB)
200.02	QP	144	360	V	42.33	43.5	1.16
214.68	QP	349	207	H	40.34	46	5.66
500.02	QP	326	336	V	39.77	46	6.23
700.02	QP	400	103	H	36.00	46	10.00
900.02	QP	221	158	V	36.77	46	9.23

Applicable limits: for $30 \text{ MHz} \leq F \leq 88 \text{ MHz}$: 40 dBμV/m at 3 meters
for $88 \text{ MHz} < F \leq 216 \text{ MHz}$: 43.5 dBμV/m at 3 meters
for $216 \text{ MHz} < F \leq 960 \text{ MHz}$: 46 dBμV/m at 3 meters
Above 960 MHz : 54 dBμV/m at 3 meters

Note: any spurious which has more than 20 dB of margin compared to the applicable limit is not necessarily reported.

Test conclusion:

RESPECTED STANDARD

9. MEASUREMENT OF THE CONDUCTED DISTURBANCES

Standard: FCC Part 15

Test procedure: Paragraph 15.207

Software used: BAT-EMC V3.6.0.32

Test set up:

The EUT is isolated and placed on a wooden table, 0.8 m over an horizontal reference plane and 0.4 m from a vertical reference plane. It is powered by an artificial main network placed on the ground reference plane. The equipment is powered with the AC power operating voltage of 120 V / 60 Hz.

See photos in appendix 2

Frequency range: 150 kHz - 30 MHz

Detection mode: Peak

Bandwidth: 10 kHz

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

Results:

Ambient temperature (°C): 23.4
Relative humidity (%): 34

Power source: 5Vdc by an USB port of a computer powered in 120Vac / 60Hz

Sample N° 1:

Measurement on the mains power supply:

The measurement is first realized with Peak detector.

Curve N° 3: measurement on the Neutral with peak detector

Curve N° 4: measurement on the Line with peak detector

Test conclusion:

RESPECTED STANDARD

10. ADDITIONAL PROVISIONS TO THE GENERAL RADIATED EMISSION LIMITATIONS

Standard: FCC Part 15

Test procedure: Paragraph 15.215

Test set up:

Test realized in near field. All field strength measurements are correlated with the radiated maximum peak output power

Test operating condition of the equipment:

The equipment under test is blocked in continuous transmission mode, modulated by internal data signal, at the highest output power level which the transmitter is intended to operate.

Results:

Ambient temperature (°C): 24
Relative humidity (%): 55

Power source: 5Vdc by a USB port of a computer powered in 120Vac / 60Hz

Lower Band Edge: from 2398 MHz to 2400 MHz
Upper Band Edge: from 2483.5 MHz to 2485.5 MHz

Sample N° 1:

Fundamental frequency (MHz)	Field Strength Level of fundamental (dBμV/m)	Detector (Peak or Average)	Frequency of maximum Band-edges Emission (MHz)	Delta Marker (dB)*	Calculated Max Out-of-Band Emission Level (dBμV/m)	Limit (dBμV/m)	Margin (dB)
2401.5395	116.2	Peak	2399.728	-43.94	72.26	96.2	23.94
2476.334875**	112.9	Peak	2483.621375	-61.21	51.69***	74	22.31
2476.334875**	112.9	Average	2484.627188	-81.06	31.84	54	22.16

* Marker-Delta method ** restricted bands of operation in 15.205

*** The peak level is lower than the average limit (54 dBμV/m).

20 dB bandwidth curves are given in appendix 5; band-edge curves are given in appendix 6.

Test conclusion:

RESPECTED STANDARD

11. MAXIMUM PEAK OUTPUT POWER

Standard: FCC Part 15

Test procedure: paragraph 15.247 (b)

Test set up:

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS), the EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber, the EUT is placed on a rotating table, 1.5m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

See photos in appendix 2.

The measurement of the electro-magnetic field is realized, with a resolution bandwidth adjusted at 1 MHz and video bandwidth at 3 MHz.

Distance of antenna: 3 meters (in anechoic room)

Antenna height: 1.5 meter (in anechoic room)

Antenna polarization: vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

Results:

Ambient temperature (°C): 25.2
Relative humidity (%): 52

Power source: 5Vdc by an USB port of a computer powered in 120Vac / 60Hz

Sample N° 1 Low channel (F=2401.6 MHz)

	Electro-magnetic field (dBμV/m):	Conducted power * (W)	Limit (W)
Nominal supply voltage:	116.2	0.070	1

Polarization of test antenna: vertical (height: 150 cm)

Position of equipment: see photos in appendix 2 (azimuth: 352 degrees)

Sample N° 1 Central channel (F=2440.8 MHz)

	Electro-magnetic field (dBμV/m):	Conducted power * (W)	Limit (W)
Nominal supply voltage:	114.9	0.052	1

Polarization of test antenna: vertical (height: 150 cm)

Position of equipment: see photos in appendix 2 (azimuth: 12 degrees)

Sample N° 1 High channel (F=2476.35 MHz)

	Electro-magnetic field (dBμV/m):	Conducted power * (W)	Limit (W)
Nominal supply voltage:	112.9	0.032	1

Polarization of test antenna: vertical (height: 150 cm)

Position of equipment: see photos in appendix 2 (azimuth: 21 degrees)

* $P = (E \times d)^2 / (30 \times G_p)$ with $d = 3 \text{ m}$ and $G_p = 1.78$

Antenna gain: 2.5 dBi

Test conclusion:

RESPECTED STANDARD

12. INTENTIONAL RADIATOR

Standard: FCC Part 15

Test procedure: paragraph 15.205, paragraph 15.209, paragraph 15.247 (d)

Test set up:

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS), the EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber, the EUT is placed on a rotating table, 1.5m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

See photos in appendix 2.

Frequency range: From 9 kHz to 10th harmonic of the highest fundamental frequency (2476.4 MHz) .

Detection mode: Quasi-peak ($F < 1 \text{ GHz}$)

Peak / Average ($F > 1 \text{ GHz}$)

Bandwidth: 200Hz ($9 \text{ kHz} < F < 150\text{kHz}$)
9 kHz ($150 \text{ kHz} < F < 30\text{MHz}$)
120 kHz ($30 \text{ MHz} < F < 1 \text{ GHz}$)
100 kHz / 1 MHz ($F > 1 \text{ GHz}$)

Distance of antenna: 10 meters (in open area test site) / 3 meters (in anechoic room)

Antenna height: 1 to 4 meters (in open area test site) / 1.5 meter (in anechoic room)

Antenna polarization: vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

Results:

Ambient temperature (°C): 26.8
Relative humidity (%): 57

Power source: 5Vdc by an USB port of a computer powered in 120Vac / 60Hz

Sample N° 1 Low channel (F=2401.6 MHz)

Spurious band 2410 - 2490 MHz

Vertical polarization Peak measure

Horizontal polarization Peak measure

Spurious band 2483.5 - 2500 MHz

Vertical polarization Peak measure

Vertical polarization Average measure

Horizontal polarization Peak measure

Vertical polarization Average measure

Note: any spurious which has more than 20 dB of margin compared to the applicable limit is not necessarily reported.

Curve with signal at antenna connector are given in appendix 10

Date: 21.AUG.2015 17:28:30

Applicable limits: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

The highest level recorded in a 100 kHz bandwidth is 116.2 dBμV/m on low channel.
So the applicable limit is 96.2 dBμV/m.

In addition, radiated emissions which fall in the restricted band, as defined in section 15.205 (a), must also comply with the radiated emission limits specified in section 15.209 (a) (see section 15.205 (c)).

Test conclusion:

RESPECTED STANDARD
