Dependence on justice

[illegible]

It's important to know that "strong" and "weak" are relative terms. For example, a 1000-psi pressure washer is "strong" compared to a 400-psi pressure washer, but it's "weak" compared to a 2500-psi pressure washer. So, if you're looking for a pressure washer, you should know what you need it for. For example, if you're looking for a pressure washer to clean your driveway, a 1000-psi pressure washer is probably the best choice. If you're looking for a pressure washer to clean your car, a 1500-psi pressure washer is probably the best choice. If you're looking for a pressure washer to clean your house, a 2500-psi pressure washer is probably the best choice.

QUESTIONS TO GOAL PASTOR

Answer each question, even if you're not a pastor. If you're not a pastor, you'll need to ask your pastor for help. If you're a pastor, you'll need to ask your congregation for help. If you're a pastor, you'll need to ask your congregation for help.

1. How many people in your congregation are currently using the Bible?
2. How many people in your congregation are currently using the Bible?
3. How many people in your congregation are currently using the Bible?
4. How many people in your congregation are currently using the Bible?
5. How many people in your congregation are currently using the Bible?
6. How many people in your congregation are currently using the Bible?
7. How many people in your congregation are currently using the Bible?
8. How many people in your congregation are currently using the Bible?
9. How many people in your congregation are currently using the Bible?
10. How many people in your congregation are currently using the Bible?

[illegible]

1. **Boundaries:** The boundaries of the system are defined by the physical and organizational limits of the organization. These boundaries determine the scope of the system and the types of interactions that are possible.

2. **Inputs:** Inputs are the resources and information that enter the system from the environment. These inputs are transformed into outputs through the processes of the system.

3. **Outputs:** Outputs are the results of the system's processes, which are then distributed back into the environment. These outputs can be in the form of products, services, or information.

4. **Processes:** Processes are the internal mechanisms of the system that transform inputs into outputs. These processes are often complex and involve multiple steps and interactions.

5. **Feedback:** Feedback is the process by which the system monitors its own performance and makes adjustments as needed. This feedback loop is essential for the system to maintain its stability and adapt to changes in the environment.

6. **Interactions:** Interactions are the relationships between the different components of the system. These interactions can be both internal (within the system) and external (between the system and its environment).

7. **Control:** Control is the process by which the system manages its resources and coordinates its activities. This control is often exercised by a central authority or a set of rules and regulations.

8. **Adaptation:** Adaptation is the system's ability to change and evolve in response to changes in the environment. This adaptation is often achieved through learning and innovation.

9. **Stability:** Stability is the system's ability to maintain its structure and function over time. This stability is often achieved through a combination of feedback and control mechanisms.

10. **Resilience:** Resilience is the system's ability to recover from disturbances and maintain its overall functionality. This resilience is often achieved through a combination of feedback and control mechanisms.
