5. Modulation Characteristics

According to FCC § 2.1047(d), Part 22H & 24E there is no specific requirement for digital modulation, therefore modulation characteristic is not presented.

6. Occupied Bandwidth Test

6.1. Test Standard and Limit

6.1.1. Test Standard

FCC part 22.913(a) and FCC part 24.232(b)

6.1.2. Test Method

FCC part 2.1049

6.1.3. Test Limit

According to FCC section 2.1049, the occupied bandwidth is the frequency bandwidth such that below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission.

Occupied bandwidth is also known as 99% power and -26dBc occupied bandwidths.

6.2. Test Setup

6.3. Test Procedure

- (1) The EUT was directly connected to the spectrum analyzer and Base station via power splitter as show in the block diagram above.
- (2) RBW was set to about 1% of emission BW, VBW= 3 times RBW.
- (3) -26dBc display line was placed on the screen (or 99% bandwidth), the occupied bandwidth is the delta frequency between the two points where the display line intersects the signal trace.

7. Out of Band Emission at Antenna Terminals

7.1. Test Standard and Limit

7.1.1. Test Standard

FCC part 22.917(a) and FCC part 24.238(a)

7.1.2. Test Method

FCC part 2.1051

7.1.3. Test Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power(P) by a factor of at least $43+10\log(P)$ dB. For all power levels +30 dBm to 0 dBm, this becomes a constant specification limit of -13 dBm.

7.2. Test Setup

7.3. Test Procedure

- (1) The RF output of the transceiver was connected to a spectrum analyzer through appropriate attenuation.
- (2) The resolution bandwidth of the spectrum analyzer was set at 100 kHz when below 1GHz, 1MHz when above 1 GHz; sufficient scans were taken to show the out of band Emissions if any up to 10th harmonic.
- (3) For the out of band: Set the RBW=100 kHz, VBW=300 kHz when below 1 GHz, RBW =1 MHz, VBW=3 MHz when above 1 GHz, Start=30MHz, Stop= 10th harmonic.
- (4) Band Edge Requirements: In the 1 MHz bands immediately outside and adjacent to the frequency block, a resolution bandwidth of at least 1 percent of the emission bandwidth of the fundamental emission of the transmitter may be employed to measure the out of band Emissions.

8.2. Test Setup

Above 1GHz

8.3. Test Procedure

- (1) The EUT was placed on an non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer.
- (2) During the measurement, the EUT was communication with the station. The highest emission was recorded with the rotation of the turntable and the lowering of the test antenna from 4m to 1m. The reading was recorded and the field strength (E in dBuV/m) was calculated.
- (3) ERP in frequency band 824.2 –848.80.8MHz were measured using a substitution method. The EUT was replaced by dipole antenna connected, the S.G. output was recorded and ERP was calculated as follows:

$$\text{ERP} = \text{S.G. output (dBm)} + \text{Antenna Gain (dBd)} - \text{Cable Loss (dB)}$$

- (4) EIRP in frequency band 1850.2 –1909.8MHz were measured using a substitution method. The EUT was replaced by or horn antenna connected, the S.G. output was recorded and EIRP was calculated as follows:

$$\text{EIRP} = \text{S.G. output (dBm)} + \text{Antenna Gain (dBi)} - \text{Cable Loss (dB)} \quad \text{Test Data}$$

- (5) The worse case was relating to the conducted output power.

9.3. Test Procedure

- (1) The EUT was placed on a non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer.
- (2) During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations.
- (3) The frequency range up to tenth harmonic was investigated for each of three fundamental frequency (low, middle and high channels). Once spurious emission was identified, the power of the emission was determined using the substitution method.
- (4) The spurious emissions attenuation was calculated as the difference between radiated power at the fundamental frequency and the spurious emissions frequency.

$$\text{ERP / EIRP} = \text{S.G. output (dBm)} + \text{Antenna Gain(dB/dBi)} - \text{Cable Loss (dB)}$$

Remark :

1. The emission behavior belongs to narrowband spurious emission.
2. Remark"---" means that the emission level is too low to be measured
3. The emission levels of below 1 GHz are very lower than the limit and not show in test report.

FCC part 2.1055(a)(1)(b)

10.1.3. Test Limit

According to FCC section 22.355 the carrier frequency of each transmitter in the Public Mobile Services must be maintained within tolerances given in the table below:

Frequency Range (MHz)	Base, fixed (ppm)	Mobile≤3 watts (ppm)	Mobile≤3 watts (ppm)
25 ~ 50	20.0	20.0	50.0
50 ~ 450	5.0	5.0	50.0
450~ 512	2.5	5.0	5.0
812 ~896	1.5	2.5	2.5
928 ~929	5.0	N/A	N/A
929~ 960	1.5	N/A	N/A
2110 ~ 2220	10.0	N/A	N/A

According to FCC section 24.235, the frequency stability shall be sufficient to ensure that the fundamental emissions stays within the authorized frequency block.

10.2. Test Setup

For Temperature Test:

10.3. Test Procedure

- (1) The equipment under test was connected to an external DC power supply and input rated voltage.
- (2) RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators.
- (3) The EUT was placed inside the temperature chamber.
- (4) Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT 25°C operating frequency as reference frequency.
- (5) Turn EUT off and set the chamber temperature to - 30°C. After the temperature stabilized for approximately 30 minutes recorded the frequency.
- (6) Repeat step measure with 10°C increased per stage until the highest temperature of +50°C reached
