MPE Calculations

1. FCC: According to KDB 447498 D01 Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies V05R02.

- (1) Clause 4.3: General SAR test reduction and exclusion guidance

- Sub clause 4.31: Standalone SAR test exclusion considerations

- 1) The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6GHz at test separation distance ≤ 50 mm are determined by:

- $$\frac{[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation, mm})] \cdot [\sqrt{f_{\text{(GHz)}}}] \leq 3.0 \text{ for 1-g SAR}$$

- $$\frac{[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation, mm})] \cdot [\sqrt{f_{\text{(GHz)}}}] \leq 7.5 \text{ for 10-g SAR}$$

Calculation:

The maximum power is 0.439 dBm(1.106mW) @2.402GHz

Separation Distance: 5mm

For 1-g SAR Result: $(1.106\text{mW} / 5\text{mm}) \cdot [\sqrt{2.402(\text{GHz})}] = 0.343 < 3.0$ for 1-g SAR

So standalone SAR measurements are not required.
