Request for FCC Class II Permissive Change

Date: September 24th, 2025

To: Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046-1609

To Whom It May Concern:

The purpose of this letter is to request a Class II permissive change for the existing grant of certification FCC ID: 2ACUJR4266F2B. The hardware modification covered by this Class II permissive change is the following:

1. Alternative addition in a dielectric resonator (DR-001) for transmitter section.
2. Resistors (R027 and R028 to U021, R037 and R038 to U022) are added, respectively.
They optimize sensing signals in non-transmitter section of the module.
3. PCB layout of non-transmitter section is modified.

See the submitted exhibits parts list (BOM), schematic and internal photos for more details.

Note:

Radio circuit and radio parameters of the transmitter modules (Model: NJR4266F2B1 and NJR4266F2B2) are un-changed by this C2PC application.
Due to company name change from New Japan Radio Co., Ltd. to Nisshinbo Micro Devices Inc. in 2022, updated product label is submitted, too.

Sincerely,

Signature:

Name:

Yuji Kita
