3.4.2 Simultaneous transmission MPE Considerations

According to KDB447498 :For mobile exposure host platform to qualify for simultaneous transmission MPE test exclusion, all transmitters and antennas in the host must be either evaluated for MPE compliance, by measurement or computational modeling, or qualify for the standalone MPE test exclusion in section 7.1. Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modeled or measured field strengths or power density, is ≤ 1.0 .

This means that:

$$\sum \text{of MPE ratios} \leq 1.0$$

For DUT can support WLAN and BT function, WLAN and BT share difference transmit modular and difference antenna, WLAN and BT can transmit signal simultaneously. thus simultaneous transmission MPE of DUT should also need meet simultaneous transmission MPE limit.

Maximum MPE ratios of WLAN	Maximum MPE ratios of BT	$\sum \text{MPE}_{\text{WLAN, BT}}$ ratios	Limit of $\sum$ of MPE ratios	Test Results
0.0629	0.0005	0.0634	1.0	PASS

4. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091(b) for the uncontrolled RF Exposure.
