## TEST REPORT

**Product** : Smart Security Light  
**Trade mark** : MAXIMUS, KUNA  
**Model/Type reference** : SPL06-07A1N4-BKT, SPL06-07A1N4-ORB,  
SPL08-07A1N4-BKT, SPL08-07A1N4-ORB,  
SPL09-05A1N4-BKT, SPL09-05A1N4-ORB,  
SPL11-07A1N4-BKT, SPL11-07A1N4-ORB  
**Serial Number** : N/A  
**Report Number** : EED32H00200505  
**FCC ID** : 2AD7D-KNP02  
**Date of Issue** : Nov. 25, 2015  
**Test Standards** : 47 CFR Part 15 Subpart C (2014)  
**Test result** : PASS

Prepared for:

**Shenzhen Jiawei Photovoltaic Lighting Co., Ltd.**  
**No.1, 2, 3, 4, Xinfu Industry Zone, Central Community, Pingdi Road,**  
**Longgang District, Shenzhen City, Guangdong Province, P.R. China**

### 3 Test Summary

| Test Item                                                                | Test Requirement                                    | Test method      | Result |
|--------------------------------------------------------------------------|-----------------------------------------------------|------------------|--------|
| <b>Antenna Requirement</b>                                               | 47 CFR Part 15, Subpart C Section 15.203/15.247 (c) | ANSI C63.10-2013 | PASS   |
| <b>AC Power Line Conducted Emission</b>                                  | 47 CFR Part 15, Subpart C Section 15.207            | ANSI C63.10-2013 | PASS   |
| <b>Conducted Peak Output Power</b>                                       | 47 CFR Part 15, Subpart C Section 15.247 (b)(3)     | ANSI C63.10-2013 | PASS   |
| <b>6dB Occupied Bandwidth</b>                                            | 47 CFR Part 15, Subpart C Section 15.247 (a)(2)     | ANSI C63.10-2013 | PASS   |
| <b>Power Spectral Density</b>                                            | 47 CFR Part 15, Subpart C Section 15.247 (e)        | ANSI C63.10-2013 | PASS   |
| <b>Band-edge for RF Conducted Emissions</b>                              | 47 CFR Part 15, Subpart C Section 15.247(d)         | ANSI C63.10-2013 | PASS   |
| <b>RF Conducted Spurious Emissions</b>                                   | 47 CFR Part 15, Subpart C Section 15.247(d)         | ANSI C63.10-2013 | PASS   |
| <b>Radiated Spurious Emissions</b>                                       | 47 CFR Part 15, Subpart C Section 15.205/15.209     | ANSI C63.10-2013 | PASS   |
| <b>Restricted bands around fundamental frequency (Radiated Emission)</b> | 47 CFR Part 15, Subpart C Section 15.205/15.209     | ANSI C63.10-2013 | PASS   |

Remark:

The tested sample(s) and the sample information are provided by the client.

Model No.: SPL06-07A1N4-BKT, SPL06-07A1N4-ORB, SPL08-07A1N4-BKT, SPL08-07A1N4-ORB, SPL09-05A1N4-BKT, SPL09-05A1N4-ORB, SPL11-07A1N4-BKT, SPL11-07A1N4-ORB

Only the Model SPL06-07A1N4-BKT was tested, since the electrical circuit design, layout, components used and internal wiring were identical for all above models. Only different on color, size and package.

Remark: Test according to ANSI C63.4-2014

## 5 Test Requirement

### 5.1 Test setup

#### 5.1.1 For Conducted test setup

#### 5.1.2 For Radiated Emissions test setup

Radiated Emissions setup:

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

Figure 3. Above 1GHz

### 5.1.3 For Conducted Emissions test setup

#### Conducted Emissions setup

## 5.2 Test Environment

| Operating Environment: |          |
|------------------------|----------|
| Temperature:           | 25 °C    |
| Humidity:              | 53 % RH  |
| Atmospheric Pressure:  | 1010mbar |

## 5.3 Test Condition

Test channel:

| Test Mode          | Tx                                                                                       | RF Channel |            |           |
|--------------------|------------------------------------------------------------------------------------------|------------|------------|-----------|
|                    |                                                                                          | Low(L)     | Middle(M)  | High(H)   |
| GFSK               | 2402MHz ~2480 MHz                                                                        | Channel 1  | Channel 20 | Channel40 |
|                    |                                                                                          | 2402MHz    | 2440MHz    | 2480MHz   |
| Transmitting mode: | Keep the EUT in transmitting mode with all kind of modulation and all kind of data rate. |            |            |           |

## 6 General Information

### 6.1 Client Information

|                          |                                                                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Applicant:               | Shenzhen Jiawei Photovoltaic Lighting Co., Ltd.                                                                                            |
| Address of Applicant:    | No.1, 2, 3, 4, Xinfu Industry Zone, Central Community, Pingdi Road, Longgang District, Shenzhen City, Guangdong Province, P.R. China       |
| Manufacturer:            | Shenzhen Jiawei Photovoltaic Lighting Co., Ltd. Gaoqiao Subsidiary                                                                         |
| Address of Manufacturer: | A, B, C, D Plants, No.4, Fugao East Road, Gaoqiao Community, Pingdi Road, Longgang District, Shenzhen City, Guangdong Province, P.R. China |
| Factory:                 | Shenzhen Jiawei Photovoltaic Lighting Co., Ltd. Gaoqiao Subsidiary                                                                         |
| Address of Factory:      | A, B, C, D Plants, No.4, Fugao East Road, Gaoqiao Community, Pingdi Road, Longgang District, Shenzhen City, Guangdong Province, P.R. China |

### 6.2 General Description of EUT

|                                  |                                                                                                                                                         |

## 6.4 Description of Support Units

The EUT has been tested independently.

## 6.5 Test Location

All tests were performed at:

Centre Testing International Group Co., Ltd.

Hongwei Industrial Zone, Bao'an 70 District, Shenzhen, Guangdong, China518101

Telephone: +86 (0) 755 33683668 Fax:+86 (0) 755 33683385

No tests were sub-contracted.

## 6.6 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

### CNAS-Lab Code: L1910

Centre Testing International Group Co., Ltd. has been assessed and proved to be in compliance with CNAS-CL01 Accreditation Criteria for Testing and Calibration Laboratories (identical to ISO/IEC 17025: 2005 General Requirements) for the Competence of Testing and Calibration Laboratories..

### A2LA-Lab Cert. No. 3061.01

Centre Testing International Group Co., Ltd. EMC Laboratory has been accredited by A2LA for technical competence in the field of electrical testing, and proved to be in compliance with ISO/IEC 17025: 2005 General Requirements for the Competence of Testing and Calibration Laboratories and any additional program requirements in the identified field of testing.

### FCC-Registration No.: 565659

Centre Testing International Group Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the FCC (Federal Communications Commission). The acceptance letter from the FCC is maintained in our files. Registration 565659.

**IC-Registration No.: 7408A**

The 3m Alternate Test Site of Centre Testing International Group Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for the performance of radiated measurements with Registration No. 7408A .

**IC-Registration No.: 7408B**

The 10m Alternate Test Site of Centre Testing International Group Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for the performance of radiated measurements with Registration No. 7408B.

**NEMKO-Aut. No.: ELA503**

Centre Testing International Group Co., Ltd. has been assessed the quality assurance system, the testing facilities, qualifications and testing practices of the relevant parts of the organization. The quality assurance system of the Laboratory has been validated against ISO/IEC 17025 or equivalent. The laboratory also fulfils the conditions described in Nemko Document NLA-10.

**VCCI**

The Radiation 3 &10 meters site of Centre Testing International Group Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-4096.

Main Ports Conducted Interference Measurement of Centre Testing International Group Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: C-4563.

Telecommunication Ports Conducted Disturbance Measurement of Centre Testing International Group Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: T-2146.

The Radiation 3 meters site of Centre Testing International Group Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-758

## **6.7 Deviation from Standards**

None.

## **6.8 Abnormalities from Standard Conditions**

None.

## **6.9 Other Information Requested by the Customer**

None.

## 6.10 Measurement Uncertainty(95% confidence levels, k=2)

| No. | Item                            | Measurement Uncertainty |
|-----|---------------------------------|-------------------------|
| 1   | Radio Frequency                 | $7.9 \times 10^{-8}$    |
| 2   | RF power, conducted             | 0.31dB (30MHz-1GHz)     |
|     |                                 | 0.57dB(1GHz-18GHz)      |
| 3   | Radiated Spurious emission test | 4.5dB (30MHz-1GHz)      |
|     |                                 | 4.8dB(1GHz-12.75GHz)    |
| 4   | Conduction emission             | 3.6dB (9kHz to 150kHz)  |
|     |                                 | 3.2dB (150kHz to 30MHz) |
| 5   | Temperature test                | 0.64°C                  |
| 6   | Humidity test                   | 2.8%                    |
| 7   | DC power voltages               | 0.025%                  |

## 7 Equipment List

## Appendix A) 6dB Occupied Bandwidth

### Test Result

| Mode | Channel | 6dB Bandwidth [MHz] | 99% OBW[MHz] | Verdict |
|------|---------|---------------------|--------------|---------|
| BLE  | LCH     | 0.6841              | 1.0447       | PASS    |
| BLE  | MCH     | 0.6730              | 1.0399       | PASS    |
| BLE  | HCH     | 0.6867              | 1.0369       | PASS    |

### Test Graphs

## Appendix B) Conducted Peak Output Power

### Test Result

| Mode | Channel | Conduct Peak Power[dBm] | Verdict |
|------|---------|-------------------------|---------|
| BLE  | LCH     | -1.771                  | PASS    |
| BLE  | MCH     | -0.472                  | PASS    |
| BLE  | HCH     | 0.124                   | PASS    |

### Test Graphs

## Appendix C) Band-edge for RF Conducted Emissions

Result Table

| Mode | Channel | Carrier Power[dBm] | Max.Spurious Level [dBm] | Limit [dBm] | Verdict |
|------|---------|--------------------|--------------------------|-------------|---------|
| BLE  | LCH     | -2.317             | -56.214                  | -22.32      | PASS    |
| BLE  | HCH     | -0.471             | -49.370                  | -20.47      | PASS    |

Test Graphs

## Appendix D) RF Conducted Spurious Emissions

Result Table

| Mode | Channel | Pref [dBm] | Puw[dBm] | Verdict |
|------|---------|------------|----------|---------|
| BLE  | LCH     | -2.408     | <Limit   | PASS    |
| BLE  | MCH     | -1.071     | <Limit   | PASS    |
| BLE  | HCH     | -0.584     | <Limit   | PASS    |

Test Graphs

## Appendix E) Power Spectral Density

Result Table

| Mode | Channel | PSD [dBm] | Verdict |
|------|---------|-----------|---------|
| BLE  | LCH     | -18.093   | PASS    |
| BLE  | MCH     | -15.052   | PASS    |
| BLE  | HCH     | -15.943   | PASS    |

Test Graphs

## Appendix F) Antenna Requirement

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

### EUT Antenna:

The antenna is integrated on the main PCB and no consideration of replacement. The best case gain of the antenna is 3dBi.

## Appendix G) AC Power Line Conducted Emission

|                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                    |           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----------|
| Test Procedure:                                                                                                                                                                      | <p>Test frequency range :150KHz-30MHz</p> <ol style="list-style-type: none"> <li>1) The mains terminal disturbance voltage test was conducted in a shielded room.</li> <li>2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a <math>50\Omega/50\mu\text{H} + 5\Omega</math> linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.</li> <li>3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,</li> <li>4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.</li> <li>5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10 on conducted measurement.</li> </ol> |                    |           |
| Limit:                                                                                                                                                                               | Frequency range (MHz)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Limit (dB $\mu$ V) |           |

| <p>* The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz.</p> <p>NOTE : The lower limit is applicable at the transition frequency</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                    |           |

### Measurement Data

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Live line:

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Peak               | 1MHz             | 10Hz   | Average    |
| Test Procedure: | <p><b>Below 1GHz test procedure as below:</b></p> <ol style="list-style-type: none"> <li>The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands. Save the spectrum analyzer plot. Repeat for each power and modulation for lowest and highest channel</li> </ol> <p><b>Above 1GHz test procedure as below:</b></p> <ol style="list-style-type: none"> <li>Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber change form table 0.8 metre to 1.5 metre( Above 18GHz the distance is 1 meter and table is 1.5 metre).</li> <li>Test the EUT in the lowest channel , the Highest channel.</li> <li>Repeat above procedures until all frequencies measured was complete.</li> </ol> |                    |                  |        |            |

**Note:**

1) Through Pre-scantransmitter mode with all kind of data type, Only worse case is reported.

2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading - Correct Factor

Correct Factor = Preamplifier Factor– Antenna Factor–Cable Factor

## Appendix I) Radiated Spurious Emissions

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |

| Test Procedure:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |
| Below 1GHz test procedure as below:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |
| <p>a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.</p> <p>b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</p> <p>c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</p> <p>d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</p> <p>e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</p> <p>f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</p> |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |
| Above 1GHz test procedure as below:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |
| <p>g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 metre to 1.5 metre( Above 18GHz the distance is 1 meter and table is 1.5 metre).</p> <p>h. Test the EUT in the lowest channel ,the middle channel ,the Highest channel</p> <p>i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is worse case.</p> <p>j. Repeat above procedures until all frequencies measured was complete.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                             |                                  |                |            |                          |

Note:

1) Through Pre-scantransmitter mode with all kind of data type, Only worse case is reported.

2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading - Correct Factor

Correct Factor = Preamplifier Factor– Antenna Factor–Cable Factor
