1 INFORMATION

1.1 Test Item

Name :	Sonitor
FCC ID :	2AD7T11117060601
Industry Canada ID :	20330-11117060601
Model/version :	L422
Serial number :	000962091002
Hardware identity and/or version:	V1.1
Software identity and/or version :	-
Frequency Range :	2412 - 2462 MHz
Number of Channels :	11
Operating Modes :	IEEE 802.11g
Type of Modulation :	OFDM
User Frequency Adjustment :	None
Output Power :	0.0082W (Conducted)
Type of Power Supply :	3.0Vdc , Battery
Number of Antennas :	1
Antenna Type :	Johanson Technology, Part number 2450AT42A100
Antenna Gain (Peak) :	1.8 dBi

Description of Test Item

The Sonitor Sense™ SmartBadge series has been designed focusing on ease of use, hygiene, long battery life and reliability. The badge is equipped with two buttons that can be pressed to initiate a variety of alerts and notifications through third party software applications. Examples of alerts and notifications are attention, help and rounding. The badge's multi-colored LED is lit as a visual confirmation when a button is pressed. It can be used as personnel tags or as equipment tag to track the location of the person or the equipment in real time.

Theory of Operation

The SmartBadge supports industry standard 802.11 positioning and communication, which means that it can be deployed in virtually any existing or new enterprise Wi-Fi infrastructure. By means of Wi-Fi trilateration alone the SmartBadge can be positioned down to a resolution of 15 - 30 feet. In areas requiring a higher degree of accuracy, the SmartBadge supports ultrasound and low frequency RF assisted positioning. In ultrasound mode, using the Sonitor virtual divider functionality, the SmartBadge series can be reliably and accurately positioned at room level as well as sub room level, such as bay, at a rate of one update per second.

In positioning mode the SmartBadge uses one-way 802.11 communication to the 802.11 access point infrastructure achieving a combination of fast communication, low consumption of bandwidth and good battery life. In configuration mode the SmartBadge supports two way 802.11 communication, enabling remote configuration and firmware upgrades.

1.2 Test Environment

1.2.1 Normal test condition

Temperature:	20 - 23 °C
Relative humidity:	20 - 47 %
Normal test voltage:	3.0Vdc

The values are the limit registered during the test period.

1.4 Description of modification for Modification Filing

Not applicable.

1.5 Family List Rational

The following model variations are using the same LF receiver.

VA no.	Variant	Comment
1	Tag-L422	Ultrasound, wi-fi, Low Frequency Receiver
2	Tag-J432	Ultrasound, wi-fi, Low Frequency Receiver, Duress. Buttons can be used to activate an alert signal.
3	Tag-L433	Ultrasound, wi-fi, Low Frequency Receiver, Duress. The red pull bridge can be used to activate an alert signal.

Note: Items that are shaded have been subject to testing documented in this report. Opinions expressed regarding application of test results to variant models are not part of our current accreditation.

Antenna Requirement

Is the antenna detachable?

☐ Yes ☒ No

If detachable, is the antenna connector non-standard?

☐ Yes ☐ No

Type of antenna connector: N/A

Ref. FCC §15.203

1.6 Worst-Case Configuration and Mode

Radiated Emissions and Power Line Conducted Emissions were performed with the EUT set to transmit at the channel with the highest output power as worst-case scenario.

The is the only data rates were used:

802.11g mode : 6 Mbps

1.7 Comments

Fully charged battery is used.

All ports were populated during spurious emission measurements.

2 TEST REPORT SUMMARY

2.1 General

All measurements are traceable to national standards.

The tests were conducted for demonstrating compliance with FCC CFR 47 Part 15, paragraph 15.247 and ISSED RSS-247 Issue 2.

Tests were performed in accordance with ANSI C63.4-2014 and ANSI C63.10-2013.

Radiated tests were made in a semi-anechoic chamber at measuring distances of 3m and 10m.

A description of the test facility is on file with the FCC and Industry Canada.

3.2 Peak Power Output

Para. No.: 15.247 (b)

Test Results: Complies

Measurement Data:

RF channel	2412 MHz	2437 MHz	2462 MHz
Measured Maxium Field strength (dBμV/m) –HP	104.1	103.5	106.13
Calc. Radiated Power (dBm)	8.90	8.23	10.90
Calc. Radiated Power (mW)	7.76	6.65	12,31
Measured Conducted Power (dBm)	8.7	9.1	9.1
Measured Conducted Power (mW)	7.3	8.2	8.2
Calculated Antenna Gain (dBi)	0.3	-0.9	1.8

Antenna gain = $10 \cdot \log(\text{EIRP} / \text{Conducted power})$ dBi

EIRP is calculated from measured field strength by the formulas in KDB 412172 D01 Determining ERP and EIRP v01.

The maximum field strength is obtained in Horizontal polarization.

See attached graph.

Requirements:

The maximum peak output power shall not exceed the following limits:

For frequency hopping systems employing at least 75 hopping channels: 1 Watt

For all other frequency hopping systems in the 2400 - 2483.5 MHz band: 0.125 Watts

For Digital Transmission Systems in the 2400 - 2483.5 MHz band: 1 Watt

If transmitting antennas of directional gain greater than 6 dBi are used, the peak output power from the intentional radiator shall be reduced below the stated value above by the amount in dB that the directional gain of the antenna exceeds 6 dBi.
